# Chip tantalum capacitors with open-function built-in

# **TCFG series P Case**

#### Features

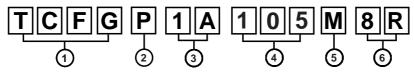

- 1) Safety design by open function built in.
- 2) Wide capacitance range
- 3) Screening by thermal shock.

# ●External dimensions (Unit : mm)

| Case code | L       | W <sub>1</sub> | W <sub>2</sub> | Н        | S        |
|-----------|---------|----------------|----------------|----------|----------|
| P (2012)  | 2.0±0.2 | 1.25±0.2       | 0.9±0.2        | Max.1.20 | 0.45±0.3 |

# Product designation

- 1 Series name
- 2 Case code
- 3 Rated Voltage

| Rated voltage (V) |    | 6.3 |    |    |    |    |
|-------------------|----|-----|----|----|----|----|
| CODE              | 0G | 0J  | 1A | 1C | 1D | 1E |

(4) Capacitance

Nominal capacitance in pF in 3 digits: 2 significant figure representing the number of 0's.

(5) Capacitance tolerance

M: ±20% K: ±10%

- 6 Taping
  - 8 : Tape width (8mm)
  - R : Positive electrode on the side opposite to sprocket hole

# ● Capacitance range

Remark) Case size codes (P) in the above show each size products line-up.

# Marking

The indications listed below should be given on the surface of a capacitor.

- ① Polarity : The polarity should be shown by  $\square$  bar. (on the anode side)
- ② Rated DC voltage: Due to the small size of P case, a voltage code is used as shown below.
- ③ Nominal capacitance

| Voltage Code | Rated DC Voltage (V) |
|--------------|----------------------|
| g            | 4                    |
| j            | 6.3                  |

# • Recommended condition of reflow soldering

(1) Soldering Conditions

# Recommended condition of reflow soldering

① Pre heating rate  $: 1 \text{ to } 5^{\circ}\text{C/ s}$ 

②Preliminary heating : 120 to 160°C, 50 to 120s

**4** Soldering : 200°C, 30 to 60s

⑤ Peak temperature : 230 to 260℃ 10s Max.

⑥ Cooling② Time② 2 times Max.

#### Recommended condition of hand soldering

①Temperature (30W Max.) : 300°C Max. ②Time : 5s Max.

# (4) Reliability

The malfunction rate of tantalum solid state electrolytic capacitors varies considerably depending on the conditions of usage (ambient temperature, applied voltage, circuit resistance).

# Formula for calculating malfunction rate

 $\lambda p = \lambda b \times (\pi E \times \pi SR \times \pi Q \times \pi CV)$ 

 $\lambda p$  : Malfunction rate stemming from operation

 $\begin{array}{ll} \lambda b & : \mbox{Basic malfunction rate} \\ \pi E & : \mbox{Environmental factors} \\ \pi S R & : \mbox{Series resistance} \\ \end{array}$ 

 $\pi Q$ : Level of malfunction rate

 $\pi cv$ : Capacitance

For details on how to calculate the malfunction rate stemming from operation, see the tantalum solid state electrolytic capacitors column in MIL-HDBK-217.

# Malfunction rate as function of operating temperature and rated voltage

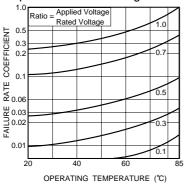

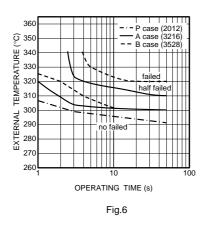

Fig.4

# (5) External temperature vs. fuse blowout

Malfunction rate as function of circuit resistance ( $\Omega N$ )

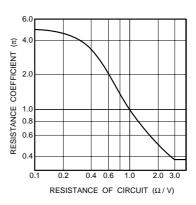

Fig.5

# (6) Power vs. fuse blowout characteristics / Product surface temperature

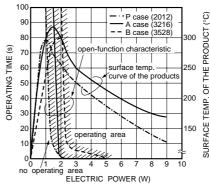

Fig.7

Note: Solder the chip at 300°C or less. If it is soldered using a temperature higher than 300°C, open function built-in may operate.

# (7) Maximum power dissipation

Warming of the capacitor due to ripple voltage balances with warming caused by Joule heating and by radiated heat. Maximum allowable warming of the capacitor is to 5°C above ambient temperature. When warming exceeds 5°C, it can damage the dielectric and cause a short circuit.

Power dissipation (P) =  $I^2 \cdot R$ 

Ripple current

P : As shown in table at right R : Equivalent series resistance

# Notes:

- 1. Please be aware that when case size is changed, maximum allowable power dissipation is reduced.
- 2. Maximum power dissipation varies depending on the package. Be sure to use a case which will keep warming within the limits shown in the table below.

# Allowable power dissipation (W) and maximum temperature rising

| Case Ambient temp   | +25°C | +55°C | +85°C | +125°C |
|---------------------|-------|-------|-------|--------|
| P case (2012)       | 0.025 | 0.022 | 0.020 | 0.010  |
| Max. Temp Rise (°C) | 5     | 5     | 5     | 2      |

#### Inrush current

#### Beware of inrush current

Inrush currents are inversely proportional ESR. Large inrush currents can cause components failure.

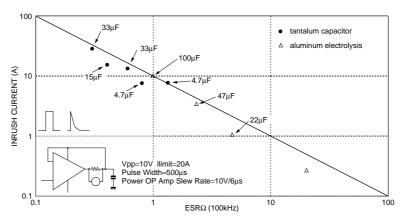

Fig. 14 Maximum inrush current and ESR

Inrush current can be limited by means of a protective resistor.

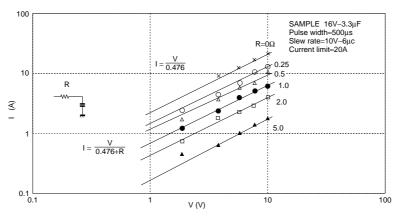

Fig. 15 Imax change due to protective resistor R

#### (11) Ultrasonic cleaning

Carry out cleaning under as mild conditions as possible. The internal element of a tantalum capacitor are larger than those of a transistor or diode, so it is not as resistant as ultrasonic waves.

Example: water

 $\begin{array}{ll} \mbox{Propagation speed} & \mbox{1500m/s} \\ \mbox{Solvent density} & \mbox{1g/cm}^{3} \end{array}$ 

Frequency and wavelength

| Frequency | Wavelength |  |
|-----------|------------|--|
| 20kHz     | 7.5cm      |  |
| 28kHz     | 5.3cm      |  |
| 50kHz     | 3.0cm      |  |

# Tantalum capacitors

#### Precautions

- 1) Do not allow solvent to come to a boil (kinetic energy increases).
- . Ultrasonic output 0.5W / cm<sup>2</sup> or less
- . Use a solvent with a high boiling point.
- . Lower solvent temperature.
- 2) Ultrasonic cleaning frequency 28 kHz or less
- 3) Keep cleaning time as short as possible.
- 4) Move item being cleaned.

  Standing waves caused by the ultrasonic waves can cause stress to build up in part of the item being cleaned.

Reference

 $\label{eq:Kinetic energy} \text{Kin etic energy} = 2 \times \pi \times \text{frequency} \times \sqrt{\frac{2 \times \text{Ultrasonic output}}{\text{propagation} \times \text{speed} \times \text{solvent density}}}$ 

#### Notes

- No technical content pages of this document may be reproduced in any form or transmitted by any
  means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the
  product described in this document are for reference only. Upon actual use, therefore, please request
  that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or
  otherwise dispose of the same, no express or implied right or license to practice or commercially
  exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of with would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

#### About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
