

EV3398E-F-00A

4 strings WLED Controller With 80V Return Evaluation Board

The Future of Analog IC Technology® DESCRIPTION

The MP3398E is a step-up controller with four current channels designed to drive WLED arrays for large size LCD panel backlighting applications. The MP3398E is able to expand the number of LED channels with two or more ICs in parallel sharing a single power source.

The MP3398E employs peak-current mode with a fixed switching frequency. The frequency is programmable through an external setting resistor. The MP3398E drives an external MOSFET to boost up the output voltage from a 4.5V to 33V input supply and regulates the current in each LED string to the value set by an external current-setting resistor.

The MP3398E applies four internal current sources for current balancing. The current matching achieves 2.3% regulation accuracy between strings. The low regulation voltage on the LED current sources reduces power loss.

The MP3398E supports direct PWM dimming and analog dimming with PWM input. Full protection features include over-current protection (OCP), Over-temperature protection (OTP), Under-voltage protection (UVP), over-voltage protection (OVP), LED short/open protection, and inductor/diode short protection.

The MP3398E is available in TSSOP-16EP and PDIP-16 packages.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	13 – 33	V
LEDs #		4 LED strings 20 LEDs/string	
LED Current	I_{LED}	120/string	mA

FEATURES

- 4-String, Max 400mA/String WLED Driver
- 4.5V to 33V Input Voltage Range
- 80V ABS. Rating for Each String
- 2.3% Current Matching Accuracy Between Each String
- Direct PWM Dimming Mode
- Analog Dimming Mode with PWM Input
- Cascading Capability with a Single Power Source
- LED Open and Short Protection
- Programmable Recoverable Over-Voltage Protection (OVP)
- 202mV Latch-off Cycle-by-Cycle Current Limit Threshold
- Recoverable Thermal Shutdown Protection
- Available in TSSOP-16EP and PDIP-16 Packages

APPLICATIONS

- Desktop LCD Flat Panel Displays
- All-in-one PCs
- 2D/3D LCD TVs

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Products, Quality Assurance page.

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 19V$, $V_{EN}=3.3V$, 120mA/string, 4 strings, 20 LEDs in series, $T_A = 25^\circ C$, unless otherwise noted.

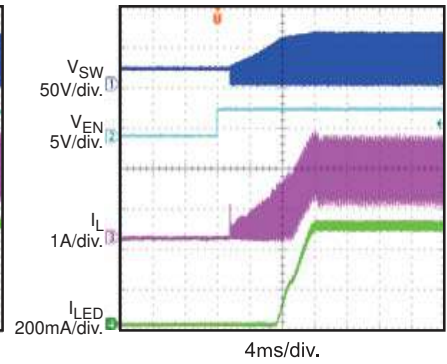

Steady State

V_{IN} Power On

EN On

PWM Dimming

$f_{SW}=200Hz$, $D_{PWM}=50\%$

Analog Dimming

$f_{PWM}=20kHz$, $D_{PWM}=50\%$

Open LED Protection

QUICK START GUIDE

1. Connect the positive and negative terminals of the load panel (20 white LEDs in series, 4 strings) to the LED+ and LED1~4 pins on the EV board, respectively.
2. Connect the positive and negative terminals of the power supply (13V ~ 33V) to the VIN and GND pins on the EV board, respectively.
3. Drive EN pin high (5V) to enable the MP3398E.
4. For PWM dimming, apply a PWM rectangular waveform with a minimum voltage less than 0.4V and a maximum greater than 1.5V on PDIM pin. The frequency of the PWM signal is recommended between 200Hz to 2kHz.
5. For analog dimming, apply a PWM rectangular waveform with a minimum voltage less than 0.4V and a maximum greater than 1.5V on ADIM pin. The frequency of the PWM signal is recommended between >20kHz.
