The default configuration (SEL = 0) is for AHJ-compliant headsets.

Figure 3. Typical Application

NOTE: When V_{DD} is not powered, all the FETs become open by default. Thus, the ground return path becomes floating. Noise might be heard if a speaker (with external powered amplifier) is plugged in the audio jack. It is highly recommended when the audio jack detects a plug-in, the NL3S325 is kept powered until unplug.
