

## Single Phase Compact Power Supply

### Description

The SPDC power supplies is a range where high performance meets high quality in a compact frame. These power supplies are offered in 120W, 240W, 480W, and they have a universal input voltage range 85VAC to 264VAC and 130VDC to 350VDC.

The SPDC achieve a high energy efficiency of up to 94%, and can be connected in parallel to achieve twice the current. Reliability is guaranteed through the multiple integrated protections, and it also comes with built-in active PFC.

SPDC coupled compact dimensions with advance features to provide a power supply for all automation applications requiring reliability, quality and performance.

### Benefits

- **Reliable power in very compact dimensions.** This SPDC has an ultra-slim DIN rail body, with up to 480W in only 70mm width of space
- **Built-in active PFC.** The power factor correction (PFC) circuit adjusts the power factor to 0.99@110Vac and 0.95@230Vac.
- **Parallel function.** The SPDC can easily be connected in parallel to provide for increased power or used in redundancy operations.
- **150% Power Boost.** The SPDC can provide 150% of the rated output power for up to 3 seconds, providing the extra power needed during critical startups.
- **Universal AC, DC input range.** SPDC Series can be powered with AC Voltage (85VAC to 264VAC) or with DC Voltage (130VDC to 350VDC).
- **Reliable critical protection.** Safety and reliability is guaranteed by the various output protections: Over Voltage (OVP), Over Load (OLP), Short Circuit (SCP) and Over Temperature (OTP).
- **High efficiency and wide operating ambient temperature.** The SPDC has a very high efficiency of up to 93.8%. The operating temperature range is, from -25°C to +60°C (without derating), and up to 70°C with -25% derating.
- **Ease of installation.** The SPDC can be installed in 5 different orientations, enabling the unit to fit easily into installation with limited space.

### Applications

The SPDC is extremely suitable for applications which requires high efficiency, high safety standards and high PF corrections. It also provides the DC OK signaling with LED and relay output.

### Main functions

- High Efficiency up to 93.8%
- In-built active PFC, PF>0.95
- Output options of 12VDC, 24VDC or 48VDC
- Universal input voltage range: 85VAC to 264VAC; 130VDC to 350VDC
- Bi-colour LED for Status, and DC-OK relay contact
- Parallel function

## Glossary

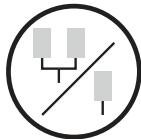

**CE:** "Conformité Européene" or "European Conformity" ; Indicates the manufacturer declaration of conformity that the product meets the relevant health, safety and environmental protection requirements of the applicable EC directives.

**cULus:** This certification mark is based on the UL508 ; Standard for Industrial Control Equipment. The UL508 covers industrial control devices and devices accessory for starting, stopping, regulating, controlling, or protecting electric motors. In addition, UL508 also covers devices rated 1500 volts or less. Industrial control equipment covered by these requirements is intended for use in an ambient temperature of 0 – 40°C (32 – 104°F)

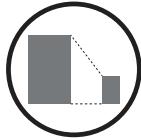

**cRUs:** This certification mark is based on the UL60950-1 ; Information Technology Equipment - Safety - Part 1. The UL60950-1 is applicable to mains-powered or battery-powered information technology equipment, including electrical business equipment and associated equipment, with a RATED VOLTAGE not exceeding 600 V.

**Parallel Operation:** Enable the use of 2 identical Power Supply units to be connected in Parallel to double the output current.

**Power Boost:** Increase the power output between 110% to 150% for a short period of time to sustain the initial load operations.

**Compact dimension:** The footprint is greatly reduced with this range, saving up to 50% space when compared to others.
