

SINGLE 8-CHANNEL MULTIPLEXER

■ GENERAL DESCRIPTION

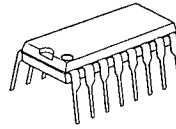

The NJU4051B is a single 8-channel multiplexer with three binary control inputs and an inhibit input.

The three binary control input signals select 1 of 8 channels to be turned on, and connect it to the single output.

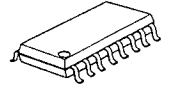

The operating voltage is as wide as 3 to 18V and the quiescent current is as low as 5μA max. (at V<sub>DD</sub>=5V).

It is equivalent to RCA CD4051B and Motorola MC14051B.
