

1x10 W digital input class-D automotive audio amplifier with advanced diagnostics, wide voltage operating range for telematics and e-Call application

QFN32 (exposed pad down)

Features

- AEC-Q100 qualified 
- Integrated 100 dB D/A conversion
- I²S and TDM digital input (up to 16CH TDM)
- Selectable input sample rate frequency (8/16/32/44.1/48/96 kHz)
- Wide supply operating range: 3.3 V - 18 V
- PWM frequency switching selectable by I²C
 - 352.8 kHz, 384kHz, 411.6 kHz, 448 kHz
- 2 I²C addresses
- MOSFET power outputs
 - Typ 10 W 4 Ω at 14.4 V, 1 kHz THD = 1%
 - Typ 5 W 8 Ω at 14.4 V, 1 kHz THD = 1%
- Noise: 38 μV A-weighted: 20 kHz
- 8 Ω, 4 Ω driving capability
- Input amplitude limiter (configurable through I²C)
- I²C full configurability and diagnostic
 - Startup diagnostic
 - Input voltage amplitude limiter function (configurable through I²C)
 - 4 x Thermal warning
 - DC diagnostic
 - OCP protection scheme configurable
 - Mute time configuration
 - DAM (Digital-Admittance-Meter)
- Capability to run complete diagnostic in play
 - Configurable Clipping Detector
 - One of the Thermal Warnings
 - Over Current Protection
 - Open Load detection
 - High voltage mute
- Load current monitor
- 2 CD/Diag pin
- Integrated ESD and short circuit protection
- QFN32 wettable flanks
- Tested according to CISPR 25 - Class V (Fourth edition)

Order code	Package	Packing
FDA903S-6DY	QFN32	Tray
FDA903S-6DT	(exp. pad down)	Tape and reel

Description

The **FDA903S** is the new ST single channel class-D audio amplifier, specifically designed for automotive applications. The FDA903S integrates a 24-bit, 100 dB DAC conversion and PWM class-D output stage with feedback before LC filter. This configuration enables the design of a compact and inexpensive application.

The FDA903S supports I²S and TDM digital bit stream up to 16CH with several sampling frequencies from 8 kHz up to 96 kHz. FDA903S embeds a complete diagnostic in play, including real-time load-current monitoring and digital admittance meter, to support the most demanding OEM requirements in terms of speaker control and system robustness/ reliability.

The FDA903S supports start stop cranking down to 3.3 V and it is available in a very compact and thin QFN 5x5 package. Thus the FDA903S is suitable for any level of automotive application especially e-Call and Telematics.

2 Electrical specifications

2.1 Thermal data

Table 2. Thermal resistance

Symbol	Parameter	Value	Unit
$R_{th\ j-a-2s2pv}$	Thermal resistance junction-to-ambient (2s2p+vias)	32.4	°C/W

Note:

- 2s2p is referred to a board with 2 layers dedicated to the signals and 2 layers dedicated to the power signals and supplies.
- from simulation according to Jedec best practice guidelines (JESD51-12) $T_{AMB} = 25\text{ °C}$ Infinite Heat Sink.

3 General information

The FDA903S is a fully digital single channel class-D audio amplifier with feedback before LC filter, designed for compact and low-cost Application, such as Telematics and eCall. The feedback before LC architecture has been chosen for allowing smaller components for the demodulator filter, saving cost and space occupation.

The I²S interface is used to provide the audio bit stream, with several sampling frequency from 8 kHz up to 96 kHz. The standard format is used for 4 channels applications, while the TDM allows to work up to 16 channels. The I²C interface is used to communicate and control the state of the power amplifier, perform the diagnostic and other features.

The FDA903S embeds an internal 24 bits DAC with 100 dB of resolution. Thanks to interpolation and noise shaping, the digital signal processing allows to reach up a good audio performance in a small device area. The internal PLL uses the clock frequency of the bit stream to generate the internal clock for the digital part and PWM for the outputs.

The innovative self-diagnostic algorithm, available also in play, allows the automatic detection of wrong load connections or variation of the load and provides this information through the I²C bus to an external microcontroller.

The amplifier signals full in-play diagnostics including real-time load-current monitoring through I²S or I²C interfaces, enabling ASIL-A certification of safety-related applications like warning-tone generators and acoustic vehicle alerting systems (AVAS). A digital admittance meter is also provided, ensuring systems containing the FDA903S can meet the most demanding requirements of automotive OEMs.

The communication to the microcontroller is improved by two dedicated CD/Diag. All the useful information, such as thermal warnings, input and output offset detection, and some more can be selected by the I²C setting and addressed to the one of the CD/Diag pins. Furthermore, one of these pins could be used to synchronize other devices on the platform for better EMC management.

4 Package information

In order to meet environmental requirements, ST offers these devices in different grades of **ECOPACK** packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: www.st.com. ECOPACK is an ST trademark.
