

HS35 ABSOLUTE ENCODER

Product Description

Built on the same rugged design as the incremental model, the HS35 Absolute Encoder is available with various output options including Gray Code and Natural Binary. Designed with a cast aluminum housing, a sealed connector and shaft seals, it carries an IP65 environmental rating. With the optional insulating inserts, it can be mounted on smaller diameter shafts. It is designed for either a through shaft mounting or blind shaft mounting with a closed cover to maintain its environmental rating.

SPECIFICATIONS

Electrical Specifications

Options	Parallel: NB or GC 12-14 Bits (See Table 1) Serial (S3): 12-16 Bits (See Table 3) Analog: (A1-A5) 12-15 Bits (See Table 2)
Count Transition Accuracy	±1/2 Bit Maximum (Consult factory over 13 Bits)
Counts per Shaft Turn	4096 - 65536, Depending on Options
Supply Voltage	5 to 28 VDC, 13 to 28 VDC for analog
Output Formats	Parallel: Gray Code, Natural Binary, Serial and Analog
Voltage/Output	(see note 2) 28V/V: Line Driver, 5–28 VDC in, $V_{out} = V_{in}$ 28V/5: Line Driver, 5–28 VDC in, $V_{out} = 5$ VDC 28V/OC: Open Collector, 5–28 VDC in, OC_{out} SSI: 5–28 VDC in/ $5V_{out}$ (consult factory for more information) Analog: A1-A5
Protection Level	Reverse, overvoltage and output short circuit protection
Frequency Response	500kHz or 6000 RPM (Parallel)
Output Termination Pinouts	See Tables For S3 options, reference Spec Addendum 02087-005 For A1-A5 options, reference Spec Addendum 02088-002

Mechanical Specifications

Shaft Bore	Many diameters from .375 to 1.000 inch are available, including metric. (Consult factory for details)
Allowable Misalignments	0.005" T.I.R. on mating shaft 0.75" from shaft end
Bore Runout	0.001 T.I.R. maximum
Starting Torque at 25°C	Through shaft version (SS) = 7 in-oz (max); Blind shaft version (BS) = 4 in-oz max
Bearings	52100 SAE High carbon steel
Shaft Material	416 stainless steel
Bearing Housing	Die cast aluminum with iridite finish; stainless steel (special feature)
Cover	Die cast aluminum with protective finish (For MS or CS terminations), otherwise drawl aluminum with protective finish; stainless-steel (special feature)
Bearing Life	7.5 X 10 ⁹ revs (50,000 hrs at 2500 RPM)
Maximum RPM	6,000 RPM (see frequency response above)
Moment of Inertia	0.019 oz-in-sec ²
Weight	18 oz. typical

Environmental Specifications

Temperature	Operating, 0° to 70°C; Extended temperature ratings are available in the following ranges: -40 to 70°C, -40

HOW TO SPECIFY SSI OUTPUT IN THE ENCODER MODEL NUMBER: Example:
HS35-100-R2-SS-12-NB-S3-CW-SM18

Direction of Count: Standard is CW increasing when viewed from the shaft end. Pin R is normally HI (or N/C) and is pulled up internally to +V. To reverse the count direction, Pin R must be pulled LO (COMMON).

Latch Control: Encoder outputs are active and provide continuous parallel position information when Pin U is HI (or N/C). Pin U is pulled up internally to +V. When Pin U is LO (COMMON) the encoder outputs are latched at the logic state that is present when the latch is applied and will stay latched until Pin U is no longer LO (COMMON).

M18 Connector is a MS3102R18-1P, 10-pin connector on the encoder body and mates to an MS3106F18-1S connector or can be used with a standard cable/connector assembly, BEI P/N 924-31186-18XX (Where XX = 10, 20 30 or 50 for a 10, 20, 30, or 50 foot length). This is the preferred connector for SSI output.

M14/19 Connector is a MS3112E14-19P, 19-pin connector on the encoder body and mates to an MS3116J14-19S or equivalent.

NOTES

1. The rubber shaft seal is recommended in virtually all installations. The most common exceptions are applications requiring a very low starting torque or those requiring operation at both high temperature and high speed. For these exceptions, a felt shaft seal is recommended. Felt seals require very low starting torque and can virtually eliminate frictional heat. Encoders ordered with felt shaft seals will have an enclosure rating of IP50 and will have less than 1/10th the Starting Torque specified under Mechanical Configurations.
 2. Output IC's: Output IC's are available as either Line Driver (LD) or NPN Open Collector (OC) types. Open Collectors require pull-up resistors, resulting in higher output source impedance (sink impedance is similar to that of line drivers). In general, use of a Line Driver style output is recommended. Line Drivers source or sink current and their lower impedance mean better noise immunity and faster switching times. **Warning:** Do not connect any line driver outputs directly to circuit common/OV, which may damage the driver. Unused outputs should be isolated and left floating. Our applications specialists would be pleased to discuss your system requirements and the compatibility of your receiving electronics with Line Driver type outputs.
- 28V/V:** Multi-voltage Line Driver (7272*): 100 mA source/sink. Input voltage 5 to 28 VDC $\pm 5\%$ standard (Note: $V_{out} = V_{in}$). This driver is TTL compatible when used with 5 volt supply. Supply lines are protected against overvoltage to 60 volts and reverse voltage. Outputs are short circuit protected for one minute. Supply current is 120 mA typical (plus load current). This is the recommended replacement for 3904R and 7406R open collector outputs with internal pullup resistors. It is also a direct replacement for any 4469, 88C30, 8830 or 26LS31 line driver
- 13-28VDC:** For Analog
- 28V/5:** Multi-voltage Line Driver (7272*): 100 mA source/sink. Input voltage 5 to 28 VDC $\pm 5\%$ standard, internally regulated with 5V (TTL compatible) logic out. Supply lines are protected against overvoltage to 60 volts and reverse voltage. Outputs are short circuit protected for one minute. Supply current is 90 mA typical (plus load current). Note: Limit encoder load to 2.5W max at ambient. Example at 12 VDC: $2.5W / (+12VDC \text{ minus } +5VDC) = 357 \text{ mA}$ total allowed current. Consult factory for your specific requirements.
- 28V/OC:** NPN Open Collector (3904*, 7273*). Current sink of 80 mA max. Current sourced by external pull-up resistor. Output can be pulled up to voltage other than supply voltage (30 V max). Input voltage 5 to 28 VDC $\pm 5\%$ standard. Supply current is 120 mA typical. This replaces prior IC's with designations of 3904, 7406, 3302, 681 and 689.
3. Special -S at the end of the model number is used to define a variety of non-standard features such as special shaft lengths, voltage options, or special testing. Please consult the factory to discuss your special requirements.

* Products manufactured prior to April 2007 used the line driver IC number instead of voltage output in model number.
