

SCCS047 - January 1998 - Revised March 2000

Features

- Low power, pin-compatible replacement for LCX and LPT families
- 5V tolerant inputs and outputs
- · 24 mA balanced drive outputs
- · Power-off disable outputs permits live insertion
- · Edge-rate control circuitry for reduced noise
- FCT-C speed at 4.6 ns
- Latch-up performance exceeds JEDEC standard no. 17
- ESD > 2000V per MIL-STD-883D, Method 3015
- Typical output skew < 250ps
- Industrial temperature range of -40°C to +85°C
- TSSOP (19.6-mil pitch) or SSOP (25-mil pitch)
- Typical V_{olp} (ground bounce) performance exceeds Mil Std 883D
- V_{CC} = 2.7V to 3.6V

CY74FCT163501 Features:

- · Balanced output drivers: 24 mA
- · Reduced system switching noise
- Typical V_{OLP} (ground bounce) <0.6V at V_{CC} = 3.3V, T_A = 25°C

CY74FCT163H501 Features:

- · Bus hold retains the last active state
- Devices with bus hold are not recommended for translating rail-to-rail CMOS signals to 3.3V logic levels

18-Bit Registered Transceivers

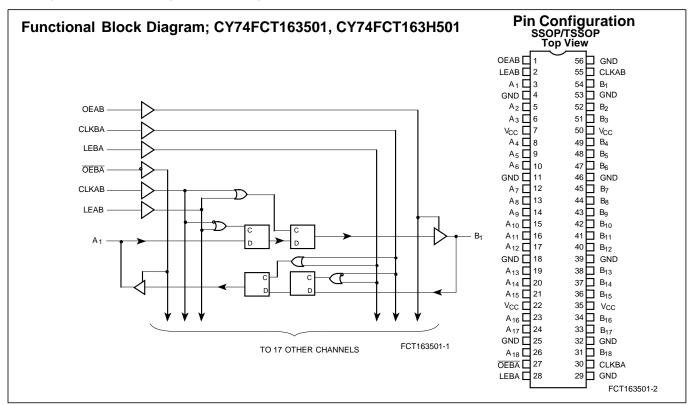

Eliminates the need for external pull-up or pull-down resistors

Functional Description

These 18-bit universal bus transceivers can be operated in transparent, latched or clock modes by combining D-type latches and D-type flip-flops. Data flow in each direction is controlled by output enable (OEAB and OEBA), latch enable (LEAB and LEBA), and clock inputs (CLKAB and CLKBA). For A-to-B data flow, the device operates in transparent mode when LEAB is HIGH. When LEAB is LOW, the A data is latched if CLKAB is held at a HIGH or LOW logic level. If LEAB is LOW, the A bus data is stored in the latch/flip-flop on the LOW-to-HIGH transition of CLKAB. OEAB performs the output enable function on the B port. Data flow from B-to-A is similar to that of A-to-B and is controlled by OEBA, LEBA, and CLKBA. The output buffers are designed with a power-off disable feature to allow live insertion of boards.

THE CY74FCT163501 has 24-mA balanced output drivers with current limiting resistors in the outputs. This reduces the need for external terminating resistors, as well as provides for minimal undershoot and reduced ground bounce. The CY74FCT163501 is ideal for driving transmission lines.

The CY74FCT163H501 is a 24-mA balanced output part, that has "bus hold" on the data inputs. The device retains the input's last state whenever the input goes to high impedance. This eliminates the need for pull-up/down resistors and prevents floating inputs.

Pin Description

Name	Description
OEAB	A-to-B Output Enable Input
OEBA	B-to-A Output Enable Input (Active LOW)
LEAB	A-to-B Latch Enable Input
LEBA	B-to-A Latch Enable Input
CLKAB	A-to-B Clock Input
CLKBA	B-to-A Clock Input
А	A-to-B Data Inputs or B-to-A Three-State Outputs ^[1]
В	B-to-A Data Inputs or A-to-B Three-State Outputs ^[1]

Function Table^[2, 3]

	Outputs			
OEAB	LEAB	CLKAB	Α	В
L	Х	Х	Х	Z
Н	Н	Х	L	L
Н	Н	Х	Н	Н
Н	L	Т	L	L
Н	L		Н	Н
Н	L	L	Х	B ^[4]
Н	L	Н	Х	B ^[5]

Maximum Ratings^[6, 7]

(Above which the useful life may be impaired. For user guidelines, not tested.)
Storage Temperature55°C to +125°C
Ambient Temperature with
Power Applied–55°C to +125°C
DC Input Voltage0.5V to +7.0V

Power Dissipation1.0W
Static Discharge Voltage>2001V (per MIL-STD-883, Method 3015)

Operating Range

Range	Ambient Temperature	V _{CC}
Industrial	–40°C to +85°C	2.7V to 3.6V

- On the 74FCT163H501 these pins have bus hold.

 A-to-B data flow is shown. B-to-A data flow is similar but uses OEBA, LEBA, and CLKBA.

 H = HIGH Voltage Level
 L = LOW Voltage Level
 X = Don't Care
 Z = High-impedance
 __ = LOW-to-HIGH Transition
 Output level before the indicated steady-state input conditions were established.
 Output level before the indicated steady-state input conditions were established, provided that CLKAB was HIGH before LEAB went LOW.
 Operation beyond the limits set forth may impair the useful life of the device. Unless otherwise noted, these limits are over the operating free-air temperature range.
 Unused inputs must always be connected to an appropriate logic voltage level, preferably either V_{CC} or ground.

Electrical Characteristics for Non Bus Hold Devices Over the Operating Range $V_{CC} = 2.7V$ to 3.6V

Parameter	Description	Test Condit	tions	Min.	Typ. [8]	Max.	Unit
V _{IH}	Input HIGH Voltage	All Inputs		2.0		5.5	V
V _{IL}	Input LOW Voltage					0.8	V
V _H	Input Hysteresis ^[9]				100		mV
V _{IK}	Input Clamp Diode Voltage	V _{CC} =Min., I _{IN} =–18 r	mA		-0.7	-1.2	V
I _{IH}	Input HIGH Current	V _{CC} =Max., V _I =5.5				±1	μΑ
I _{IL}	Input LOW Current	V _{CC} =Max., V _I =GND)			±1	μΑ
I _{OZH}	High Impedance Output Current (Three-State Output pins)	V _{CC} =Max., V _{OUT} =5.5V				±1	μА
I _{OZL}	High Impedance Output Current (Three-State Output pins)	V _{CC} =Max., V _{OUT} =GND				±1	μА
Ios	Short Circuit Current ^[10]	V _{CC} =Max., V _{OUT} =G	ND	-60	-135	-240	mA
I _{OFF}	Power-Off Disable	V _{CC} =0V, V _{OUT} ≤4.5V				±100	μΑ
I _{CC}	Quiescent Power Supply Current	V _{IN} ≤0.2V, V _{IN} ≥V _{CC} −0.2V	/ _{CC} =Max.		0.1	10	μА
Δl _{CC}	Quiescent Power Supply Current (TTL inputs HIGH)	V _{IN} =V _{CC} -0.6V ^[11] V	/ _{CC} =Max.		2.0	30	μА

Typical values are at V_{CC}=3.3V, T_A = +25°C ambient.
 This parameter is specified but not tested.
 Not more than one output should be shorted at a time. Duration of short should not exceed one second. The use of high-speed test apparatus and/or sample and hold techniques are preferable in order to minimize internal chip heating and more accurately reflect operational values. Otherwise prolonged shorting of a high output may raise the chip temperature well above normal and thereby cause invalid readings in other parametric tests. In any sequence of parameter tests, I_{OS} tests should be performed last.
 Per TTL driven input (V_{IN}=3.4V); all other inputs at V_{CC} or GND.

Electrical Characteristics For Bus Hold Devices Over the Operating Range V_{CC} =2.7V to 3.6V

Parameter	Description	Test Condi	tions	Min.	Typ. ^[8]	Max.	Unit
V _{IH}	Input HIGH Voltage	All Inputs		2.0		V _{CC}	V

Notes:

Notes:

14. For conditions shown as Max. or Min., use appropriate value specified under Electrical Characteristics for the applicable device type.

15. This parameter is not directly testable, but is derived for use in Total Power Supply Current.

16. I_C= I_{QUIESCENT} + I_{INPUTS} + I_{DYNAMIC}
I_C = I_{CC}+ΔI_{CC}D_HN_T+I_{CCD}(f₀/2 + f₁N₁)
I_{CC} = Quiescent Current with CMOS input levels
ΔI_{CC} = Power Supply Current for a TTL HIGH input (V_{IN}=3.4V)
D_H = Duty Cycle for TTL inputs HIGH
N_T = Number of TTL inputs at D_H
I_{CCD} = Dynamic Current caused by an input transition pair (HLH or LHL)
I₀ = Clock frequency for registered devices, otherwise zero
I₁ = Input signal frequency

= Input signal frequency

= Number of inputs changing at f₁

All currents are in milliamps and all frequencies are in megahertz.

17. Values for these conditions are examples of the I_{CC} formula. These limits are specified but not tested.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

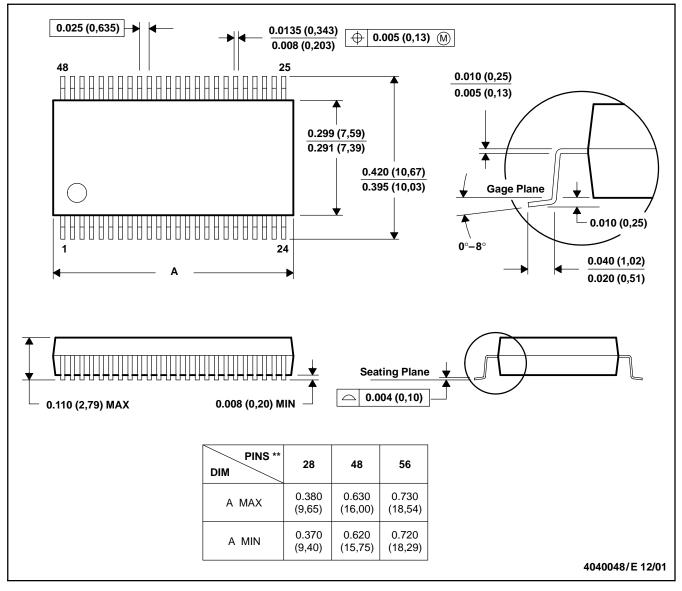

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
