

## Low Noise, Wideband Precision Operational Amplifiers

March 1993

### Features

- Gain Bandwidth Product ..... 100MHz
- Unity Gain Bandwidth ..... 35MHz
- High Slew Rate ..... 35V/μs
- Low Offset Voltage ..... 0.3mV
- High Open Loop Gain ..... 128dB
- Channel Separation at 10kHz ..... 110dB
- Low Noise Voltage at 1kHz ..... 3.4nV/√Hz
- High Output Current ..... 56mA
- Low Supply Current per Amplifier ..... 8mA

### Applications

- Precision Test Systems
- Active Filtering
- Small Signal Video
- Accurate Signal Processing
- RF Signal Conditioning

### Description

The HA-5221/5222 are single and dual high performance dielectrically isolated, monolithic op amps, featuring precision DC characteristics while providing excellent AC characteristics. Designed for audio, video, and other demanding applications, noise (3.4nV/√Hz at 1kHz), total harmonic distortion (< 0.005%), and DC errors are kept to a minimum.

The precision performance is shown by low offset voltage (0.3mV), low bias currents (40nA), low offset currents (15nA), and high open loop gain (128dB). The combination of these excellent DC characteristics with the fast settling time (0.4μs) make the HA-5221/5222 ideally suited for precision signal conditioning.

The unique design of the HA-5221/5222 gives them outstanding AC characteristics not normally associated with precision op amps, high unity gain bandwidth (35MHz) and high slew rate (35V/μs). Other key specifications include high CMRR (95dB) and high PSRR (100dB). The combination of these specifications will allow the HA-5221/5222 to be used in RF signal conditioning as well as video amplifiers.

For MIL-STD-883C compliant product and Ceramic LCC packaging, consult the HA-5221/5222/883C data sheet.

## Specifications HA-5221, HA-5222

### Absolute Maximum Ratings (Note 1)

Supply Voltage Between V+ and V- Terminals .....	35V
Differential Input Voltage (Note 14) .....	5V
Output Current Short Circuit Duration .....	Indefinite
Junction Temperature .....	+175°C
Junction Temperature (Plastic Package) .....	+150°C
Lead Temperature (Soldering 10 Sec.) .....	+300°C

### Operating Conditions

Operating Temperature Range	HA-5221/5222-9 .....	$-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$
	HA-5221/5222-5 .....	$0^{\circ}\text{C} \leq T_A \leq +75^{\circ}\text{C}$
Storage Temperature Range .....		$-65^{\circ}\text{C} \leq T_A \leq +150^{\circ}\text{C}$

**CAUTION:** Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

### Electrical Specifications $V_+ = 15\text{V}$ , $V_- = -15\text{V}$ , Unless Otherwise Specified

PARAMETER	TEMP	HA-5221-9 & HA-5222-9			HA-5221-5 & HA-5222-5			UNITS

**NOTES:**

- Absolute maximum ratings are limiting values, applied individually, beyond which the serviceability of the circuit may be impaired. Functional operation under any of these conditions is not necessarily implied.
- Refer to typical performance curve in data sheet.
- $A_{VCL} = 10, f_O = 1kHz, V_O = 5V_{rms}, R_L = 600\Omega, 10Hz$  to  $100kHz$ , Minimum resolution of test equipment is 0.005%.
- $V_{OUT} = 0$  to  $\pm 10V, R_L = 1K, C_L = 50pF$ .
- $V_{CM} = \pm 10V$ .
- $V_{OUT} = \pm 10V$ .
- Full Power Bandwidth is calculated by:  $FPBW = \frac{\text{Slew Rate}}{2\pi V_{Peak}}, V_{Peak} = 10V$
- HA-5222 only,  $f_O = 10kHz, R_L = 1K, C_L = 50pF$ .
- $V_{OUT} = \pm 2.5V, R_L = 1K, C_L = 50pF$ .
- $V_{OUT} = \pm 100mV, R_L = 1K, C_L = 50pF$ .
- Settling time is specified for a 10V step and  $A_V = -1$ .
- $V_S = \pm 10V$  to  $\pm 20V$ .
- See Test Circuits.
- Input is protected by back-to-back zener diodes. See applications section.
- Guaranteed by characterization.

**Applications Information**

**Operation at Various Supply Voltages**

The HA-5221/5222 operates over a wide range of supply voltages with little variation in performance. The supplies may be varied from  $\pm 5$  volts to  $\pm 15$  volts. See typical performance curves for variations in supply current, slew rate and output voltage swing.

**Offset Adjustment**

The following diagram shows the offset voltage adjustment configuration for the HA-5221. By moving the potentiometer wiper towards pin 8 (+BAL), the op amps output voltage will increase; towards pin 1 (-BAL) decreases the output voltage. A 20k $\Omega$  trim pot will allow an offset voltage adjustment of about 10mV.

**Capacitive Loading Considerations**

When driving capacitive loads >80pF, a small resistor, 50 to 100 $\Omega$ , should be connected in series with the output and inside the feedback loop.

**Saturation Recovery**

When an op amp is over driven, output devices can saturate and sometimes take a long time to recover. By clamping the input, output saturation can be avoided. If output saturation can not be avoided, the maximum recovery time when over-driven into the positive rail is 10.6 $\mu s$ . When driven into the negative rail the maximum recovery time is 3.8 $\mu s$ .

**Input Protection**

The HA-5221/5222 has built in back-to-back protection diodes which limit the maximum allowable differential input voltage to approximately 5 volts. If the HA-5221/5222 will be used in circuits where the maximum differential voltage may be exceeded, then current limiting resistors must be used. The input current should be limited to a maximum of 10mA.

**PC Board Layout Guidelines**

When designing with the HA-5221 or the HA-5222, good high frequency (RF) techniques should be used when building a P.C. board. Use of ground plane is recommended. Power supply decoupling is very important. A 0.01 $\mu F$  to 0.1 $\mu F$  high quality ceramic capacitor at each power supply pin with a 2.2 $\mu F$  to 10 $\mu F$  tantalum close by will provide excellent decoupling. Chip capacitors produce the best results due to ease of placement next to the op amp and basically no lead inductance. If leaded capacitors are used, the leads should be kept as short as possible to minimize lead inductance.
