

# PHVL Supercapacitors

## Cylindrical packs

### Description

Eaton supercapacitors are high reliability, high power, ultra-high capacitance energy storage devices utilizing electric double layer capacitor (EDLC) construction combined with proprietary materials and processes. This combination of advanced technologies allows Eaton to offer a wide variety of capacitor solutions tailored to applications for backup power, pulse power and hybrid power systems.

They can be applied as the sole energy storage or in combination with batteries to optimize cost, life time and run time. System requirements can range from a few microwatts to megawatts.

All products feature low ESR for high power density with environmentally friendly materials for a green power solution. Eaton supercapacitors are maintenance-free with design lifetimes up to 20 years\* and operating temperatures down to -40 °C and up to +85 °C.

### Features and benefits

- Low leakage current, low self discharge
- Large capacitance for high energy density
- Ultra-low ESR for high power density

### Applications

- Pulse Power
- Water and gas meters
- Battery assist for peak power
  - Especially Lithium Thionyl
- IoT sensors
- Long duration, low power discharges
  - RTC
  - Memory backup
- Bridging or hold-up power

### Environmental compliance

\*Supercapacitor lifetimes vary based on charge voltage and temperature. See Eaton's application guidelines or contact your local Eaton sales representative for more information on lifetime estimates

## Performance

Parameter	Capacitance change (% of initial value)	ESR (% of maximum initial value)
Lifetime: (3.9 V; 2 years @ +65 °C, 5,000 hours @ +85 °C)	≤ 30%	≤ 200%
Charge/discharge cycles <sup>7</sup> : (500,000 at +20 °C)	≤ 30%	≤ 200%
Storage: Low and high temperature (1000 hours @ -40 °C and +85 °C)	≤ 30%	≤ 200%

1. Capacitance, Equivalent series resistance (ESR) and leakage current are measured according to IEC62391-1

2. Leakage current at +20 °C after 72 hour charge and hold.

3. Stored energy (mWh) =  $\frac{0.5 \times V^2 \times C}{3600} \times 1000$

4. Peak power (W) =  $\frac{V^2}{4 \times \text{ESR}}$

5. Pulse current for 1 second from full rate voltage to half voltage.(A) =  $\frac{0.5 \times V \times C}{(1 + \text{ESR} \times C)}$

6. Short circuit current is for safety information only. Do not use as operating current.

7. Cycling between rated voltage and half voltage, 3 second rest at +20 °C.

8. Voltage testing and verification of product under end application conditions is recommended

## Safety and certifications

Environmental compliance	RoHS, REACH, lead free, halogen free
Warnings	Do not overvoltage, do not reverse polarity
Shipping	No restrictions, per UN3499 with all cells <10 watt-hours

## Manual solder

+350 °C (4-5 seconds by soldering iron), generally manual/hand soldering is not recommended

## Cleaning/Washing

Avoid cleaning of circuit boards, however if the circuit board must be cleaned use static or ultrasonic immersion in a standard circuit board cleaning fluid for no more than 5 minutes and a maximum temperature of +60 °C. Afterwards thoroughly rinse and dry the circuit boards. In general, treat supercapacitors in the same manner you would an aluminum electrolytic capacitor.

Life Support Policy: Eaton does not authorize the use of any of its products for use in life support devices or systems without the express written approval of an officer of the Company. Life support systems are devices which support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
