

FEMTOCLOCKS™ CRYSTAL-TO-LVCMOS/LVTTL CLOCK GENERATOR

ICS840001

GENERAL DESCRIPTION

The ICS840001 is a Fibre Channel Clock Generator and a member of the HiPerClocks™ family of high performance devices from IDT. The ICS840001 uses a 26.5625MHz crystal to synthesize either 106.25MHz or 212.5MHz, using the **FREQ_SEL** pin.

The ICS840001 has excellent phase jitter performance, over the 637kHz – 10MHz integration range. The ICS840001 is packaged in a small 8-pin TSSOP, making it ideal for use in systems with limited board space.

FEATURES

- One LVCMOS/LVTTL output, 7Ω typical output impedance
- Crystal oscillator interface designed for 26.5625MHz, 18pF parallel resonant crystal
- Selectable 106.25MHz or 212.5MHz output frequency
- VCO range: 560MHz to 680MHz
- RMS phase jitter @ 106.25MHz, using a 26.5625MHz crystal (637kHz - 10MHz): 0.696ps (typical)
- RMS phase noise at 106.25MHz (typical)

Phase noise:

Offset	Noise Power
100Hz	-94.4 dBc/Hz
1kHz	-119.9 dBc/Hz
10kHz	-130.2 dBc/Hz
100kHz	-131.5 dBc/Hz

- 3.3V operating supply
- -30°C to 85°C ambient operating temperature
- Available in both standard (RoHS 5) and lead-free (RoHS 6) packages

POWER SUPPLY FILTERING TECHNIQUES

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. The ICS840001 provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL. V_{DD} , and V_{DDA} should be individually connected to the power supply plane through vias, and bypass capacitors should be used for each pin. To achieve optimum jitter performance, power supply isolation is required. *Figure 1* illustrates how a 10Ω resistor along with a $10\mu\text{F}$ and a $.01\mu\text{F}$ bypass capacitor should be connected to each V_{DDA} pin.

RECOMMENDATIONS FOR UNUSED INPUT PINS

INPUTS:

LVCMOS CONTROL PINS

All control pins have internal pull-ups or pull-downs; additional resistance is not required but can be added for additional protection. A $1\text{k}\Omega$ resistor can be used.

CRYSTAL INPUT INTERFACE

The ICS840001 has been characterized with 18pF parallel resonant crystals. The capacitor values, C1 and C2, shown in *Figure 2* below were determined using a 26.5625MHz, 18pF

parallel resonant crystal and were chosen to minimize the ppm error. The optimum C1 and C2 values can be slightly adjusted for different board layouts.

FIGURE 2. CRYSTAL INPUT INTERFACE

LVCMOS TO XTAL INTERFACE

The XTAL_IN input can accept a single-ended LVCMOS signal through an AC coupling capacitor. A general interface diagram is shown in *Figure 3*. The XTAL_OUT pin can be left floating. The input edge rate can be as slow as 10ns. For LVCMOS inputs, it is recommended that the amplitude be reduced from full swing to half swing in order to prevent signal interference with the power rail and to reduce noise. This configuration requires that the output

impedance of the driver (R_o) plus the series resistance (R_s) equals the transmission line impedance. In addition, matched termination at the crystal input will attenuate the signal in half. This can be done in one of two ways. First, R_1 and R_2 in parallel should equal the transmission line impedance. For most 50 Ω applications, R_1 and R_2 can be 100 Ω . This can also be accomplished by removing R_1 and making R_2 50 Ω .

LAYOUT GUIDELINE

Figure 4A shows a schematic example of the ICS840001. An example of LVCMOS termination is shown in this schematic. Additional LVCMOS termination approaches are shown in the LVCMOS Termination Application Note. In this example, an 18 pF parallel resonant 26.5625MHz crystal is used. The C1= 27pF and C2 = 33pF are recommended for frequency accuracy. For different

board layout, the C1 and C2 may be slightly adjusted for optimizing frequency accuracy. The output frequency can be set at either 106.25MHz or 212.5MHz. Leaving the R1 un-installed (or install 1kΩ pull-down) will set the output frequency at 106.25MHz. Installing the R1 pull up will set the output frequency at 212.5MHz.

PC BOARD LAYOUT EXAMPLE

Figure 4B shows an example of P.C. board layout. The crystal X1 footprint in this example allows either surface mount (HC49S) or through hole (HC49) package. C3 is 0805. C1 and C2 are 0402.

Other resistors and capacitors are 0603. This layout assumes that the board has clean analog power and ground planes.
