S5-E2000D40

The S5-E2000D40 is a shock recorder with a high performance piezoelectric accelerometer, a secondary capacitive accelerometer and other environmental sensors. This model is most popular for shock testing due its wide 2,000g range. Its aluminum enclosure improves reliability in harsh environments and widens its frequency response. The S5 offers a larger battery to allow for the longest recording times of our sensors.

Battery & Storage Performance

Battery performance is heavily dependent upon the device configuration (sensor sample rates and triggers), battery age (including charging cycles), and temperature. The following table provides the battery life and storage capacity

of this device assuming it has a relatively new battery and it is at room temperature. When showing performance it assumes all sensors are on at the default sample rate with the main accelerometer sample rate driving performance. With triggers, it assumes the device is in trigger mode 99% of the time. Here are some additional resources: [Measurement Settings](#), [Battery Specifications](#), [Battery Life Estimator Tool](#).

Sample Rate	Storage Capacity	Continuous Recording	Main Accel. Trigger	2nd Accel. Trigger	Periodic/Time Trigger
100 Hz	22 days	44 hours	44 hours	7 days	177 days
1,000 Hz	18 days	41 hours	44 hours	7 days	167 days
5,000 Hz	3 days	30 hours	44 hours	7 days	129 days
20,000 Hz	17 hours	17 hours	44 hours	7 days	68 days
