INDUCTORS

⊗TDK

Inductors for power circuits Wound ferrite VLBU series

VLBU1024660F1 type

FEATURES

- O It is an SMD inductor for a power supply circuit that improves saturation current with high BS ferrite material.
- O Large current and lower DCR were achieved by the connecting wire-less structure.
- O This is a narrow inductor for multiphase operation, such as Vcore regulators, Voltage Regulator Modules (VRMs), Point-of-Load, and memory power applications.
- Support in PMIC Evaluation Kits.
- VLBU series is satisfied high efficiency requirements for VR13 and VR14 applications.
- Operating temperature range: -40 to +125°C (including self-temperature rise)

APPLICATION

○ Servers, BTS, VRM, others

PART NUMBER CONSTRUCTION

VLBU	1024660	R07	М	F1
Series name	L×W×H dimensions 10.2x4.6x6.0 mm max.	Inductance (µH)	Inductance tolerance	Internal code

CHARACTERISTICS SPECIFICATION TABLE

L		Measuring frequency	DC resista	nce	Rated current	nt*	Part No.
					Isat	Itemp	
(nH)	Tolerance	(kHz)	(m Ω)typ.	Tolerance	(A)typ.	(A)typ.	
70	±20%	100	0.23	±10%	104	70	VLBU1024660R07MF1
120	±20%	100	0.23	±10%	58	70	VLBU1024660R12MF1

* Rated current: smaller value of either lsat or Itemp.

Isat: When based on the inductance change rate (20% below the nominal value, under an environment of 20°C)

Itemp: When based on the temperature increase (temperature increase of 40°C by self heating)

Measurement equipment

Measurement item	Product No.	Manufacturer

REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

 The storage period is within 6 months. Be sure to follow the storage conditions (temperature: 5 to 30°C, humidity: 10 to 75% RH o less). If the storage period elapses, the soldering of the terminal electrodes may deteriorate. 					
\bigcirc Do not use or store in locations where there are conditions such as	Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).				
 Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature does not exceed 150°C. 	e difference between the solder temperature and chip temperature				
 Soldering corrections after mounting should be within the range of If overheated, a short circuit, performance deterioration, or lifespar 	-				
When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.					
Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set therma design.					
 Carefully lay out the coil for the circuit board design of the non-mag A malfunction may occur due to magnetic interference. 	gnetic shield type.				
○ Use a wrist band to discharge static electricity in your body through	n the grounding wire.				
\bigcirc Do not expose the products to magnets or magnetic fields.					
\bigcirc Do not use for a purpose outside of the contents regulated in the d	elivery specifications.
