SN74LV594A-Q1 SCLS887 - DECEMBER 2022

SN74LV594A-Q1 Automotive 8-Bit Parallel-Out Serial Shift Registers

1 Features

- AEC-Q100 qualified for automotive applications:
 - _ Device temperature grade 1: -40°C to +125°C, Τ_A
 - **Device HBM ESD Classification Level 2** Device CDM ESD Classification Level C6
 - Available in wettable flank QFN (WBQB) package
- ٠ 2 V to 5.5 V V_{CC} operation
- Maximum tpd of 6.5 ns at 5 V •
- Typical V_{OLP} (output ground bounce) <0.8 V at V_{CC} • = 3.3 V, T_A = 25°C
- Support mixed-mode voltage operation on all ports
- 8-bit serial-in, parallel-out shift registers with ٠ storage
- Independent direct overriding clears on shift and storage registers
- Independent clocks for shift and storage registers
- Latch-up performance exceeds 100 mA per JESD 78. Class II

2 Applications

- **Output expansion**
- LED matrix control
- 7-segment display control

3 Description

The SN74LV594A-Q1 devices are 8-bit shift registers designed for 2-V to 5.5-V V_{CC} operation.

Package Information⁽¹⁾

| PART NUMBER | PACKAGE | BODY SIZE (NOM) | | |
|---------------|----------------|-------------------|--|--|
| SN74LV594A-Q1 | BQB (WQFN, 16) | 3.60 mm × 2.60 mm | | |

For all available packages, see the orderable addendum at (1) the end of the data sheet.

Table 5-1. Pin Functions

(1) I = Input, O = Output, I/O = Input or Output, G = Ground, P = Power

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

| | | | MIN | MAX | UNIT |
|------------------|---|-------------------------|-----------------------|-----|------|
| V _{CC} | Supply voltage | | -0.5 | 7 | V |
| VI | Input voltage ⁽²⁾ | | -0.5 | 7 | V |
| Vo | Voltage range applied to any output in the high-i | -0.5 | 7 | V | |
| Vo | Output voltage ^{(2) (3)} | -0.5 | V _{CC} + 0.5 | V | |
| I _{IK} | Input clamp current | V _I < 0 | -20 | | mA |
| I _{OK} | Output clamp current | V _O < 0 | -50 | | mA |
| I _O | Continuous output current | $V_{O} = 0$ to V_{CC} | -25 | 25 | mA |
| T _{stg} | Storage temperature | | -65 | 150 | °C |

(1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

(2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.

(3) The value is limited to 5.5 V maximum.

6.2 ESD Ratings

| | | | VALUE | UNIT |
|--------------------|-------------------------|--|-------|------|
| | - | Human body model (HBM), per AEC Q100-002 HBM ESD Classification Level 2 ⁽¹⁾ | ±2000 | |
| V _(ESD) | Electrostatic discharge | Charged device model (CDM), per AEC Q100-011 CDM ESD Classification Level C6 | ±1000 | V |

(1) AEC Q100-002 indicate that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

| | | | MIN | MAX | UNIT |
|-----------------|------------------------------------|----------------------------------|-----------------------|-----------------------|------|
| V _{CC} | Supply voltage | | 2 | 5.5 | V |
| | | V _{CC} = 2 V | 1.5 | | |
| V | High-level input voltage | V _{CC} = 2.3 V to 2.7 V | V _{CC} × 0.7 | | V |
| V _{IH} | $V_{CC} = 3 V \text{ to } 3.6 V$ | | V _{CC} × 0.7 | | v |
| | | V _{CC} = 4.5 V to 5.5 V | V _{CC} × 0.7 | | |
| | | V _{CC} = 2 V | | 0.5 | |
| V | Low-level input voltage | V _{CC} = 2.3 V to 2.7 V | | V _{CC} × 0.3 | V |
| VIL | Low-level input voltage | V _{CC} = 3 V to 3.6 V | | V _{CC} × 0.3 | v |
| | | V _{CC} = 4.5 V to 5.5 V | | V _{CC} × 0.3 | |
| VI | Input voltage | | 0 | 5.5 | V |
| Vo | Output voltage | | 0 | V _{CC} | V |
| | | V _{CC} = 2 V | | -50 | μA |
| | High-level input current | V _{CC} = 2.3 V to 2.7 V | | -2 | |
| I _{ОН} | riigii-ievei iliput current | V _{CC} = 3 V to 3.6 V | | 6 | mA |
| | | V _{CC} = 4.5 V to 5.5 V | | –12 | |
| | | V _{CC} = 2 V | | 50 | μA |
| Le. | Low-level output current | V _{CC} = 2.3 V to 2.7 V | | 2 | |
| I _{OL} | Low-level output current | V _{CC} = 3 V to 3.6 V | | 6 | mA |
| | | V _{CC} = 4.5 V to 5.5 V | | 12 | |
| | | V _{CC} = 2.3 V to 2.7 V | | 200 | |
| Δt/Δv | Input transition rise or fall rate | V _{CC} = 3 V to 3.6 V | | 100 | ns/V |
| | | V _{CC} = 4.5 V to 5.5 V | | 20 | |
| T _A | Operating free-air temperature | | -40 | 125 | °C |

 All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report Implications of Slow or Floating CMOS Inputs, SCBA004.

6.4 Thermal Information

| | | SN74LV594A-Q1 BQB (WQFN) 16 PINS 86.0 82.6 54.9 | |

6.14 Typical Characteristics

7 Parameter Measurement Information

- NOTES: A. CL includes probe and jig capacitance.
 - B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
 - C. All input pulses are supplied by generators having the following characteristics: PRR \leq 1 MHz, Z_O = 50 Ω , t_f \leq 3 ns, t_f \leq 3 ns.
 - D. The outputs are measured one at a time, with one input transition per measurement.
 - E. tpLZ and tpHZ are the same as tdis.
 - F. tpzL and tpzH are the same as ten.
 - G. tPHL and tPLH are the same as tpd.
 - H. All parameters and waveforms are not applicable to all devices.

Figure 7-1. Load Circuit and Voltage Waveforms

8 Detailed Description

8.1 Overview

The SN74LV594A-Q1 devices are 8-bit shift registers designed for 2-V to 5.5-V V_{CC} operation.

These devices contain an 8-bit serial-in, parallel-out shift register that feeds an 8-bit D-type storage register. Separate clocks (RCLK, SRCLK) and direct overriding clear (\overline{RCLR} , \overline{SRCLR}) inputs are provided on the shift and storage registers. A serial output ($Q_{H'}$) is provided for cascading purposes. The shift-register (SRCLK) and storage-register (RCLK) clocks are positive-edge triggered. If the clocks are tied together, then the shift register always is one clock pulse ahead of the storage register.

8.2 Functional Block Diagram

8.3 Feature Description

The device's wide operating range allows it to be used in a variety of systems that use different logic levels. The low propagation delay allows fast switching and higher speeds of operation. In addition, the low ground bounce stabilizes the performance of non-switching outputs while another output is switching.

8.4 Device Functional Modes

| | | INPUTS | | | FUNCTION | | | | | | | | |
|-----|-------|--------|------|------|---|--|--|--|--|--|--|--|--|
| SER | SRCLK | SRCLR | RCLK | RCLR | FUNCTION | | | | | | | | |
| Х | Х | L | X | Х | Shift register is cleared. | | | | | | | | |
| L | 1 | Н | x | х | First stage of shift register goes low. Other stages store the data of previous stage, repectively. | | | | | | | | |
| н | 1 | Н | x | х | First stage of shift register goes high. Other stages store the data of previous stage, respectively. | | | | | | | | |

| Х | Х | Х | Ļ | Н | Storage register state is not changed. | | | | | | | | |

Table 8-1. Function Table

9 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Application Information

The SN74LV594A-Q1 is a low drive CMOS device that can be used for a multitude of bus interface type applications where output ringing is a concern. The low drive and slow edge rates will minimize overshoot and undershoot on the outputs.

9.2 Typical Application

9.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads, so consider routing and load conditions to prevent ringing.

9.2.2 Detailed Design Procedure

- · Recommended input conditions:
 - Rise time and fall time specs. See ($\Delta t/\Delta V$) in Section 6.3.
 - Specified high and low levels. See (V_{IH} and V_{IL}) in Section 6.3.
 - Inputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid V_{CC} .
- Recommended output conditions:
 - Load currents should not exceed 25 mA per output and 50 mA total for the part.
 - Outputs should not be pulled above V_{CC}.

9.2.3 Application Curves

RCLK rising edge shifts data to the output registers

10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Recommended Operating Conditions*. Each V_{CC} terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, TI recommends a 0.1- μ F capacitor and if there are multiple V_{CC} terminals then TI recommends a 0.01- μ F or 0.022- μ F capacitor for each power terminal. Multiple bypass capacitors can be paralleled to reject different frequencies of noise. Frequencies of 0.1 μ F and 1 μ F are commonly used in parallel. The bypass capacitor should be installed as close as possible to the power terminal for best results.

11 Layout 11.1 Layout Guidelines

When using multiple bit logic devices inputs should not ever float.

In many cases, functions or parts of functions of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or only three of the four buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Specified below are the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or V_{CC} whichever make more sense or is more convenient. Floating outputs is generally acceptable, unless the part is a transceiver. If the transceiver has an output enable pin, then it will disable the outputs section of the part when asserted. This will not disable the input section of the I.O's so they also cannot float when disabled.

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 Support Resources

TI E2E[™] support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

12.3 Trademarks

TI E2E[™] is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.5 Glossary

TI Glossary This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

| Orderable Device | Status (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan (2) | Lead finish/ Ball material | MSL Peak Temp (3) | Op Temp (°C) | Device Marking (4/5) | Samples |
|--------------------|---------------|--------------|--------------------|------|----------------|-----------------|-------------------------------|----------------------|--------------|-------------------------|---------|
| SN74LV594AQWBQBRQ1 | ACTIVE | WQFN | BQB | 16 | 3000 | RoHS & Green | (6) NIPDAU | Level-1-260C-UNLIM | -40 to 125 | LV594Q | Samples |

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
