

## 100LVEL16 3.3V ECL Differential Receiver

### General Description

The 100LVEL16 is a low voltage differential receiver that contains an internally supplied voltage source,  $V_{BB}$ . When used in a single ended input condition the unused input must be tied to  $V_{BB}$ . When operating in this mode use a 0.01  $\mu$ F capacitor to decouple  $V_{BB}$  and  $V_{CC}$  and also limit the current sinking or sourcing capability to 0.5mA. When  $V_{BB}$  is not used it should be left open.

With inputs open the differential Q outputs default LOW and  $\bar{Q}$  outputs default HIGH.

The 100 series is temperature compensated.
