

### Single Phase Synchronous Buck PWM Controller

### AP3581A/B/C

#### General Description

The AP3581A/B/C is a compact synchronous-rectified buck controller specifically designed to operate from 5V/12V supply and deliver high-quality output voltage as low as 0.6V (AP3581A) or 0.8V (AP3581B/C). The AP3581A/B/C operates at fixed frequency of 300kHz (AP3581A/B) or 200kHz (AP3581C) and provides an optimal level of integration to reduce size and cost of the power supply.

This controller integrates internal MOSFET drivers that support 12V+12V bootstrapped voltage for high-efficiency power conversion. The bootstrap diode is built-in to simplify the circuit design and minimize external part count.

This controller provides single feedback loop, voltage-mode control with fast transient response. The error amplifier features a 10MHz gain-bandwidth product and 6V/μs slew rate which enables high converter bandwidth for fast transient performance.

Other features include internal soft-start, under voltage protection, over current protection and shutdown function. With afore-mentioned functions, this part provides customers a compact, high efficiency, well-protected and cost-effective solutions.

The AP3581A/B/C is available in PSOP-8 package.

#### Features

- Supply Voltage: 5V/12V  
V<sub>IN</sub> Input Range: 3.0V to 13.2V  
0.6V/0.8V to 80% of V<sub>IN</sub> Output Range  
Internal Reference: 0.6V/0.8V
- Simple Single-loop Control  
Voltage-mode PWM Control  
Duty Cycle: 0% to 80%  
Fast Transient Response
- 10MHz High-bandwidth Error Amplifier with 6V/μs Slew Rate
- Fixed Oscillator Frequency: 300kHz/200kHz
- Lossless, Programmable Over Current Protection (Uses Lower MOSFET R<sub>DS(ON)</sub>)
- Start-up into Pre-biased Output
- Built-in Thermal Shutdown
- Built-in Soft-start
- Over Current/Voltage Protection
- Under Voltage Protection
- Integrated Boot Diode

#### Applications

- Power Supplies for Microprocessors/Peripherals  
PCs, Embedded Controllers, Memory Supplies  
DSP and Core Communications Processor Supplies
- Subsystem Power Supplies  
PCI, AGP, Graphics Cards, Digital TV  
SSTL-2 and DDR/2/3 SDRAM Bus Termination Supply
- Cable Modems, Set Top Boxes, and DSL Modems
- Industrial Power Supplies and General Purpose Supplies
- 5V/12V Input DC-DC Regulators
- Low-voltage Distributed Power Supplies

Figure 1. Package Type of AP3581A/B/C

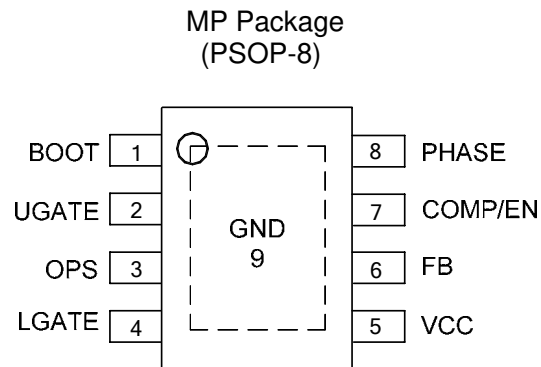

**Single Phase Synchronous Buck PWM Controller**
**AP3581A/B/C**
**Pin Configuration**

Figure 2. Pin Configuration of AP3581A/B/C (Top View)

**Pin Description**

Pin Number	Pin Name	Function
1	BOOT	Bootstrap pin. Connect a bootstrap capacitor (Typically from 0.1 $\mu$ F to 0.47 $\mu$ F) from this pin to PHASE pin to create a BOOT voltage suitable to drive a standard N-Channel MOSFET
2	UGATE	Upper-gate drive pin. Connect this pin to the upper MOSFET gate providing the gate drive. This pin is monitored by the adaptive shoot-through protection circuitry to determine when the upper MOSFET has been turned off
3	OPS	Over-current setting pin. Connecting a resistor ( $R_{OCSET}$ ) between OPS and GND to set the over-current trigger point
4	LGATE	Lower-gate drive pin. Connect LGATE to the lower MOSFET gate providing the gate drive for the lower MOSFET. This pin is monitored by the adaptive shoot-through protection circuitry to determine when the lower MOSFET has turned off
5	VCC	Bias supply pin. Provides a 5V or 12V bias supply for the chip from this pin. The pin should be bypassed with a capacitor to GND
6	FB	Feedback pin. This pin is the inverting input of the internal error amplifier. Use FB pin, in combination with the COMP pin, to compensate the voltage control feedback loop of the converter. A resistor divider from output to GND is used to set the output voltage
7	COMP/EN	Compensation and disable pin, this pin is the output of the error amplifier. Pull COMP pin low will shut down the IC
8	PHASE	PHASE pin. This pin connects to the source of the upper MOSFET and the drain of the lower MOSFET. This pin is also monitored by the adaptive shoot-through protection circuitry to determine when the upper MOSFET has turned off
9	GND	Exposed pad as ground pin. Represents the signal and power ground for the IC. Tie this pin to the ground island/plane through the lowest impedance connection available

**Ordering Information**

Package	Temperature Range	Part Number	Marking ID	Packing Type
PSOP-8	-40 to 85°C	AP3581AMP-G1	3581AMP-G1	Tube
		AP3581AMPTR-G1	3581AMP-G1	Tape & Reel
		AP3581BMP-G1	3581BMP-G1	Tube
		AP3581BMPTR-G1	3581BMP-G1	Tape & Reel
		AP3581CMP-G1	3581CMP-G1	Tube
		AP3581CMPTR-G1	3581CMP-G1	Tape & Reel

BCD Semiconductor's Pb-free products, as designated with "G1" suffix in the part number, are RoHS compliant and green.

**Single Phase Synchronous Buck PWM Controller****AP3581A/B/C****Absolute Maximum Ratings (Note 1)**

Parameter	Symbol	Value	Unit
Supply Voltage	$V_{CC}$	-0.3 to 15	V
BOOT Voltage	$V_{BOOT}$	-0.3 to $V_{PHASE} + 15$	V
Voltage from UGATE to PHASE	$V_{UGATE}$	-0.3 to 15	V
Voltage from PHASE, LGATE Pin to GND	$V_{PHASE}$ , $V_{LGATE}$	-1 to 15	V
Voltage on Other Separate Pin		-0.3 to 6	V
Thermal Resistance	$\theta_{JA}$	50	°C/W
Operating Junction Temperature	$T_J$	-40 to 125	°C
Storage Temperature	$T_{STG}$	-65 to 150	°C
Lead Temperature (Soldering, 10 sec)	$T_{LEAD}$	260	°C
ESD (Human Body Model) (Note 2)		2000	V
ESD (Machine Model) (Note 2)		200	V

Note 1: Stresses greater than those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “Recommended Operating Conditions” is not implied. Exposure to “Absolute Maximum Ratings” for extended periods may affect device reliability.

Note 2: Devices are ESD sensitive. Handling precaution recommended.

**Recommended Operating Conditions**

Parameter	Symbol	Min	Max	Unit
Supply Input Voltage	$V_{CC}$	4.5	13.2	V
Operating Junction Temperature Range	$T_J$	-40	125	°C
Operating Ambient Temperature	$T_A$	-40	85	°C

**Single Phase Synchronous Buck PWM Controller**
