14 × 32 × 6 FIELD-PROGRAMMABLE LOGIC ARRAYS

D2708, JUNE 1984—REVISED AUGUST 1989

- Input-to-Output Propagation Delay . . . 10 ns Typical
- 24-Pin, 300-mil Slim Line Packages
- Power Dissipation . . . 650 mW Typical
- Programmable Output Polarity

LOGIC FUNCTION

$f(i) = P_0 + P_1 \dots P_{31}$ for polarity link intact

$f(i) = \overline{P_0} * \overline{P_1} * \dots * \overline{P_{31}}$ for polarity link open

where P_0 through P_{31} are product terms

description

The 'FPLA839 (3-state outputs) and the 'FPLA840 (open-collector outputs) are TTL field-programmable logic arrays containing 32 product terms (AND terms) and six sum terms (OR terms). Each of the sum-of-products output functions can be programmed either high true or low true. The true condition of each output function is activated by the programmed logical minterms of 14 input variables. The outputs are controlled by two chip-enable pins to allow output inhibit and expansion of terms.

These devices provide high-speed data-path logic replacement where several conventional SSI functions can be designed into a single package.

The 'FPLA839C and 'FPLA840C are characterized for operation from 0°C to 70°C.

 †FPLA839 has 3-state (∇) outputs; FPLA840 has open-collector (\diamond) outputs.

absolute maximum ratings

Supply voltage, V_{CC} (see Note 1)	7 V
Input voltage (see Note 1)	5.5 V
Off-state output voltage (see Note 1)	5.5 V
Operating free-air temperature	0°C to 70°C
Storage temperature range	-65°C to 150°C

NOTE 1: These ratings apply except for programming pins during a programming cycle.

programming information

Texas Instruments Programmable Logic Devices can be programmed using widely available software and inexpensive device programmers.

Complete programming specifications, algorithms, and the latest information on hardware, software, and firmware are available upon request. Information on programmers capable of programming Texas Instruments Programmable Logic is also available, upon request, from the nearest TI field sales office, local authorized TI distributor, or by calling Texas Instruments at (214) 997-5666.

- NOTES: A. C_L includes probe and jig capacitance and is 50 pF for t_{pd} and t_{en} , 5 pF for t_{dis} .
 B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 C. All input pulses have the following characteristics: $PRR \leq 1$ MHz, $t_r = t_f = 2$ ns, duty cycle = 50%.
 D. When measuring propagation delay times of 3-state outputs, switch S1 is closed.
