
MAX4737/MAX4738/ MAX4739

4.5Ω Quad SPST Analog Switches in UCSP

General Description

The MAX4737/MAX4738/MAX4739 low-voltage, low on-resistance (R_{ON}), quad single-pole/single throw (SPST) analog switches operate from a single +1.8V to +5.5V supply. These devices are designed for USB 1.1 and audio switching applications.

The MAX4737/MAX4738/MAX4739 feature 4.5Ω R_{ON} (max) with 1.2Ω flatness and 0.4Ω matching between channels. These new switches feature guaranteed operation from +1.8V to +5.5V and are fully specified at 3V and 5V. These switches offer break-before-make switching (1ns) with $t_{ON} < 80\text{ns}$ and $t_{OFF} < 40\text{ns}$ at +2.7V. The digital logic inputs are +1.8V logic compatible with a +2.7V to +3.6V supply.

These switches are packaged in a chip-scale package (UCSP™), significantly reducing the required PC board area. The chip occupies only a 2mm x 2mm area and has a 4 x 4 bump array with a bump pitch of 0.5mm. These switches are also available in a 14-pin TSSOP and a 16-pin thin QFN (4mm x 4mm) package.

Applications

- Battery-Operated Equipment
- Audio/Video-Signal Routing
- Low-Voltage Data-Acquisition Systems
- Sample-and-Hold Circuits
- Data-Acquisition Systems
- Communications Circuits

UCSP is a trademark of Maxim Integrated Products, Inc.

Benefits and Features

- USB 1.1 Signal Switching
- 2ns (max) Differential Skew
- -3dB Bandwidth: >300MHz
- Low 20pF On-Channel Capacitance
- Low R_{ON}
 - 4.5Ω (max) (+3V Supply)
 - 3Ω (max) (+5V Supply)
- 0.4Ω (max) R_{ON} Match (+3V Supply)
- 1.2Ω (max) R_{ON} Flatness (+3V Supply)
- <0.5nA Leakage Current at +25°C
- High Off-Isolation: -55dB (10MHz)
- Low Crosstalk: -80dB (10MHz)
- Low Distortion: 0.03%
- +1.8V CMOS-Logic Compatible
- Single-Supply Operation from +1.8V to +5.5V
- Rail-to-Rail Signal Handling

Absolute Maximum Ratings

(All Voltages Referenced to GND)

| | |
|--|----------------------|
| V+, IN_ | -0.3V to +6.0V |
| COM_, NO_, NC_ (Note 1) | -0.3V to (V+ + 0.3V) |
| Continuous Current COM_, NO_, NC_ | ±100mA |
| Peak Current COM_, NO_, NC_ (pulsed at 1ms, 10% duty cycle) | ±200mA |
| Continuous Power Dissipation ($T_A = +70^\circ\text{C}$) | |
| 14-Pin TSSOP (derate 6.3mW/°C above +70°C) | 500mW |
| 16-Bump UCSP (derate 8.3mW/°C above +70°C) | 659mW |
| 16-Pin Thin QFN (derate 25mW/°C above +70°C) | 2000mW |

Note 1: Signals on COM_, NO_, or NC_ exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Electrical Characteristics—Single +3V Supply

(V+ = +2.7V to +3.6V, $V_{IH} = +1.4V$, $V_{IL} = +0.5V$, $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted. Typical values are at V+ = +3.0V, $T_A = +25^\circ\text{C}$, unless otherwise noted.) (Notes 3, 4)

Note 3: UCSP parts are 100% tested at $+25^\circ C$ only, and guaranteed by design over the specified temperature range. TSSOP and thin QFN parts are 100% tested at T_{MAX} and guaranteed by design over the specified temperature range.

Note 4: The algebraic convention used in this data sheet is where the most negative value is a minimum and the most positive value is a maximum.

Note 5: Guaranteed by design for UCSP and thin QFN parts.

Note 6: $\Delta R_{ON} = R_{ON(MAX)} - R_{ON(MIN)}$.

Note 7: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal ranges.

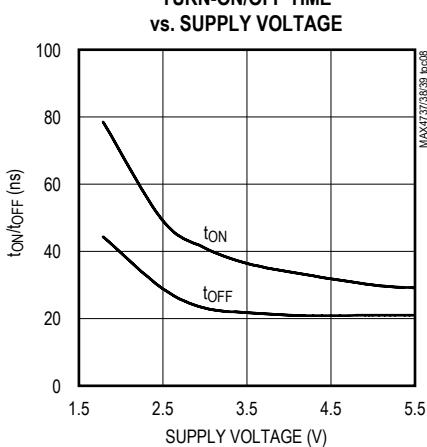

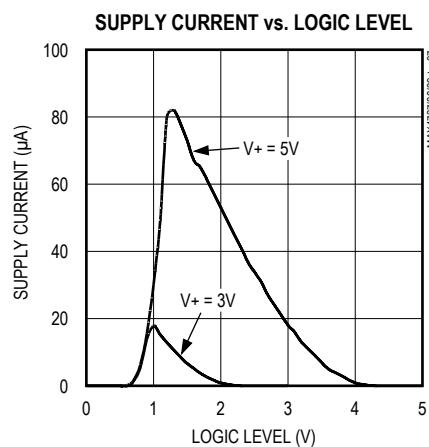

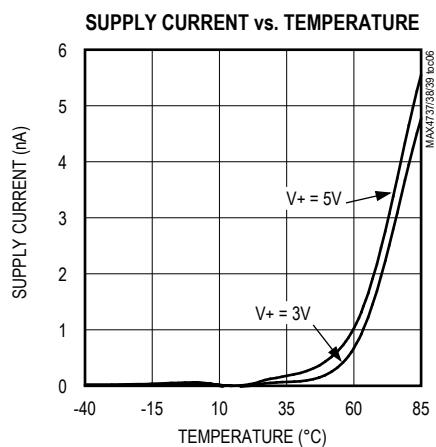

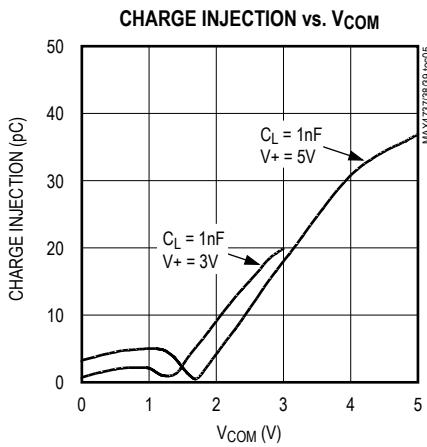

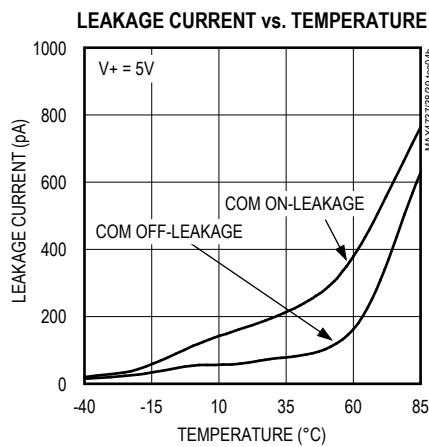

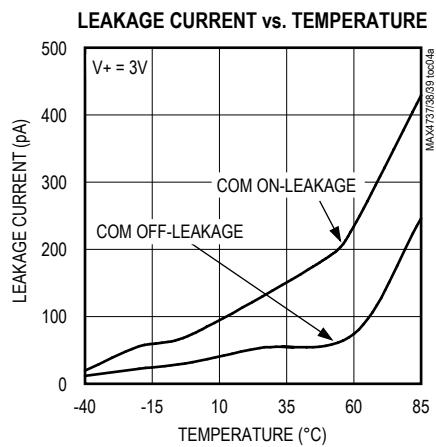

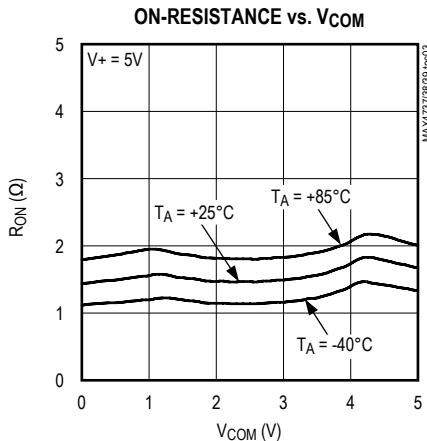

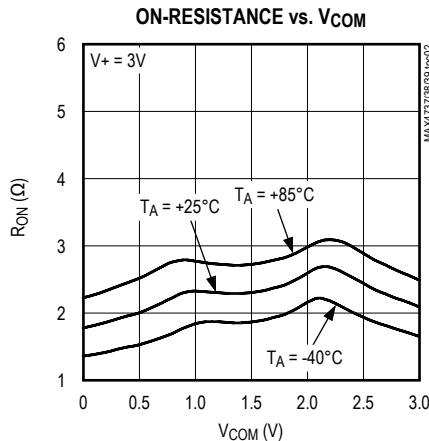

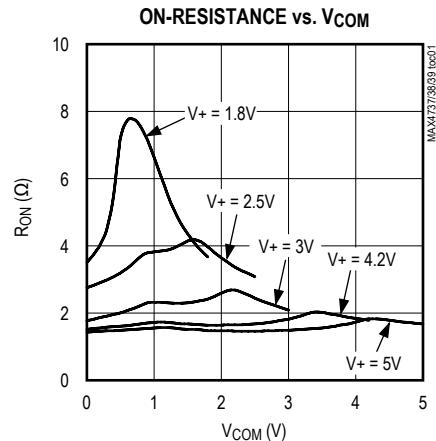

Note 8: Guaranteed by design.

Note 9: Off-Isolation = $20\log_{10}(V_{COM}/V_{NO})$, V_{COM} = output, V_{NO} = input to off switch.

Note 10: Between any two switches.

Detailed Description

The MAX4737/MAX4738/MAX4739 quad SPST analog switches operate from a single +1.8V to +5.5V supply. The MAX4737/MAX4738/MAX4739 offer excellent AC characteristics, <0.5nA leakage current, less than 1ns differential skew, and 15pF on-channel capacitance. All of these devices are CMOS-logic compatible with V+ to GND signal handling capability.

The MAX4737/MAX4738/MAX4739 are USB-compliant switches that provide 4.5Ω (max) on-resistance and 15pF on-channel capacitance to maintain signal integrity. At 12Mbps (USB full-speed data rate specification), the MAX4737/MAX4738/MAX4739 introduce less than 2ns propagation delay between input and output signals and less than 0.5ns change in skew for the output signals (see Figure 4).

The MAX4737 has four normally open (NO) switches, the MAX4738 has four normally closed (NC) switches, and the MAX4739 has two NO switches and two NC switches.

Applications Information

Digital Control Inputs

The MAX4737/MAX4738/MAX4739 logic inputs accept up to +5.5V regardless of supply voltage. For example, with a +3.3V supply, IN_{_} can be driven low to GND and high to +5.5V allowing for mixing of logic levels in a system. Driving the control logic inputs rail-to-rail minimizes power consumption. For a +1.8V supply voltage, the logic thresholds are 0.5V (low) and 1.4V (high); for a +5V supply voltage, the logic thresholds are 0.8V (low) and 2.0V (high).

Analog Signal Levels

Analog signals that range over the entire supply voltage (V+ to GND) are passed with very little change in on-resistance (see *Typical Operating Characteristics*). The switches are bidirectional, so the NO_{_}, NC_{_}, and COM_{_} pins can be either inputs or outputs.

Power-Supply Bypassing

Power-supply bypassing improves noise margin and prevents switching noise from propagating from the V+ supply to other components. A 0.1μF capacitor connected from V+ to GND is adequate for most applications.

UCSP Applications Information

For the latest application details on UCSP construction, dimensions, tape carrier information, PC board techniques, bump-pad layout, and recommended reflow temperature profile, as well as the latest information on reliability testing results, refer to the Application Note: *UCSP—A Wafer-Level Chip-Scale Package* on Maxim's web site at www.maximintegrated.com/ucsp.
