

Features

- Floating channel designed for bootstrap operation
- Fully operational to +600 V
- Tolerant to negative transient voltage – dV/dt immune
- Application-specific gate drive range:
Motor Drive: 12 V to 20 V (AUIRS2127/AUIRS2128)
Automotive: 9 V to 20 V (AUIRS21271/AUIRS21281)
- Undervoltage lockout
- Desaturation Over Current Protection
- 3.3 V, 5 V, and 15 V input logic compatible
- FAULT lead indicates shutdown has occurred
- Output in phase with input (AUIRS2127/AUIRS21271)
- Output out of phase with input (AUIRS2128/AUIRS21281)
- Lead-free, RoHS compliant
- Automotive qualified*

Typical Applications

- Fork Lift motor drives
- hydraulic pumps
- IGBT drive with Desaturation Detection
- General purpose three phase inverters

Product Summary

Topology		Single
V _{OFFSET}		≤ 600 V
V _{OUT}	AUIRS212(7,8)	12 V – 20 V
	AUIRS212(71,81)	8.4 V – 20 V
I _{o+} & I _{o-} (typical)		290 mA & 600 mA
t _{ON} & t _{OFF} (typical)		200 ns & 175 ns

Package Options

Description

The AUIRS2127S/AUIRS2128S/AUIRS21271S/AUIRS21281S are high voltage, high speed power MOSFET and IGBT drivers. Proprietary HVIC and latch immune CMOS technologies enable ruggedized monolithic construction. The logic input is compatible with standard CMOS or LSTTL outputs, down to 3.3 V. The protection circuitry detects over-current in the driven power transistor and terminates the gate drive voltage. An open drain FAULT signal is provided to indicate that an over-current shutdown has occurred. The output drivers feature a high pulse current buffer stage designed for minimum cross-conduction. The floating channel can be used to drive an N-channel power MOSFET or IGBT in the high- side or low-side configuration which operates up to 600 V.

Qualification Information[†]

Qualification Level		Automotive (per AEC-Q100 ^{††})	
		Comments: This family of ICs has passed an Automotive qualification. IR's Industrial and Consumer qualification level is granted by extension of the higher Automotive level.	
Moisture Sensitivity Level		SOIC8	MSL3 ^{†††} 260°C (per IPC/JEDEC J-STD-020)
ESD	Machine Model	Class M2 (Pass +/-150V) (per AEC-Q100-003)	
	Human Body Model	Class H1B (Pass +/-1000V) (per AEC-Q100-002)	
	Charged Device Model	Class C4 (Pass +/-1000V) (per AEC-Q100-011)	
IC Latch-Up Test		Class II, Level A ^{††††} (per AEC-Q100-004)	
RoHS Compliant		Yes	

† Qualification standards can be found at International Rectifier's web site <http://www.irf.com/>

†† Exceptions to AEC-Q100 requirements are noted in the qualification report.

††† Higher MSL ratings may be available for the specific package types listed here. Please contact your International Rectifier sales representative for further information.

†††† FAULT pin not stressed.

Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which permanent damage to the device may occur. These are stress ratings only, functional operation of the device at these or any other condition beyond those indicated in the “Recommended Operating Condition” is not implied. Exposure to absolute maximum-rated conditions for extended periods may affect device reliability. All voltage parameters are absolute voltages referenced to COM unless otherwise stated in the table. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

Symbol	Definition	Min.	Max.	Units
V_B	High-side floating absolute voltage	-0.3	625	V
V_S	High-side floating supply offset voltage	$V_B - 25$	$V_B + 0.3$	
V_{HO}	High-side floating output voltage	$V_S - 0.3$	$V_B + 0.3$	
V_{CC}	Logic supply voltage	-0.3	25	
V_{IN}	Logic input voltage	-0.3	$V_{CC} + 0.3$	
V_{FLT}	FAULT output voltage	-0.3	$V_{CC} + 0.3$	
V_{CS}	Current sense voltage	$V_S - 0.3$	$V_B + 0.3$	
dV_S/dt	Allowable offset supply voltage transient	—	50	V/ns
P_D	Package power dissipation @ $T_A \leq 25^\circ\text{C}$	—	0.625	W
R_{thJA}	Thermal resistance, junction to ambient	—	200	$^\circ\text{C}/\text{W}$
T_J	Junction temperature	—	150	$^\circ\text{C}$
T_S	Storage temperature	-55	150	
T_L	Lead temperature (soldering, 10 seconds)	—	300	

Recommended Operating Conditions

The input/output logic timing diagram is shown in Fig. 1. For proper operation the device should be used within the recommended conditions. The V_S offset rating is tested with all supplies biased at 15 V differentials.

Symbol	Definition	Min.	Max.	Units	
V_B	High-side floating supply voltage	(AUIRS2127/AUIRS2128)	$V_S + 12$	$V_S + 20$	V
		(AUIRS21271/AUIRS21281)	$V_S + 9$	$V_S + 20$	
V_S	High-side floating supply offset voltage	†	600		
V_{HO}	High-side floating output voltage	V_S	V_B		
V_{CC}	Logic supply voltage	10	20		
V_{IN}	Logic input voltage	0	V_{CC}		
V_{FLT}	FAULT output voltage	0	V_{CC}		
V_{CS}	Current sense voltage	V_S	$V_S + 5$		
T_A	Ambient temperature	-40	125	$^\circ\text{C}$	

† Logic operational for V_S of -5 to +600 V. Logic state held for V_S of -5 V to $-V_{BS}$.
(Please refer to the Design Tip DT97 -3 for more details).

Static Electrical Characteristics

Unless otherwise noted, these specifications apply for an operating junction temperature range of $-40^{\circ}\text{C} \leq T_j \leq 125^{\circ}\text{C}$ with bias conditions of $V_{\text{BIAS}} (V_{\text{CC}}, V_{\text{BS}}) = 15 \text{ V}$. The V_{IL} , V_{IH} and I_{IN} parameters are referenced to COM. The V_{O} and I_{O} parameters are referenced to V_{S} .

Symbol	Definition		Min	Typ	Max	Units	Test Conditions
V_{IH}	Logic "1" input voltage	(AUIRS2127/AUIRS21271)	2.5	—	—	V	$V_{\text{CC}} = 10 \text{ V to } 20 \text{ V}$
	Logic "0" input voltage	(AUIRS2128/AUIRS21281)					
V_{IL}	Logic "0" input voltage	(AUIRS2127/AUIRS21271)	—	—	0.8		
	Logic "1" input voltage	(AUIRS2128/AUIRS21281)					
$V_{\text{CSTH+}}$	CS input positive going threshold	(AUIRS2127/AUIRS2128)	180	250	320	mV	
		(AUIRS21271/AUIRS21281)	1.5	1.8	2.1	V	
V_{OH}	High level output voltage, $V_{\text{BIAS}} - V_{\text{O}}$		—	0.05	0.2	V	$I_{\text{O}} = 2 \text{ mA}$
V_{OL}	Low level output voltage, V_{O}		—	0.02	0.1	V	
I_{LK}	Offset supply leakage current		—	—	50	μA	$V_{\text{B}} = V_{\text{S}} = 600 \text{ V}$
I_{QBS}	Quiescent V_{BS} supply current		—	300	925		$V_{\text{IN}} = 0 \text{ V or } 5 \text{ V}$
I_{QCC}	Quiescent V_{CC} supply current		—	60	130		$V_{\text{IN}} = 5 \text{ V}$
$I_{\text{IN+}}$	Logic "1" input bias current		—	7.0	15		$V_{\text{IN}} = 0 \text{ V}$
$I_{\text{IN-}}$	Logic "0" input bias current		—	—	5.0		$V_{\text{CS}} = 3 \text{ V}$
$I_{\text{CS+}}$	"High" CS bias current		—	—	5.0		$V_{\text{CS}} = 0 \text{ V}$
$I_{\text{CS-}}$	"High" CS bias current		—	—	5.0		
$V_{\text{BSUV+}}$	V_{BS} supply undervoltage positive going threshold	(AUIRS2127/AUIRS2128)	8.8	10.3	11.8		V
		(AUIRS21271/AUIRS21281)	6.3	7.2	8.2		
$V_{\text{BSUV-}}$	V_{BS} supply undervoltage negative going threshold	(AUIRS2127/AUIRS2128)	7.5	9.0	10.6		
		(AUIRS21271/AUIRS21281)	6.0	6.8	7.7		
$I_{\text{O+}}$	Output high short circuit pulsed current ^(†)		200	290	—	mA	$V_{\text{O}} = 0 \text{ V}, V_{\text{IN}} = 5 \text{ V}$ $\text{PW} \leq 10 \mu\text{s}$
$I_{\text{O-}}$	Output low short circuit pulsed current ^(†)		420	600	—		$V_{\text{O}} = 15 \text{ V}, V_{\text{IN}} = 0 \text{ V}$ $\text{PW} \leq 10 \mu\text{s}$
$R_{\text{on, FLT}}$	FAULT – low on resistance		—	125	—	Ω	

(†) Guaranteed by design

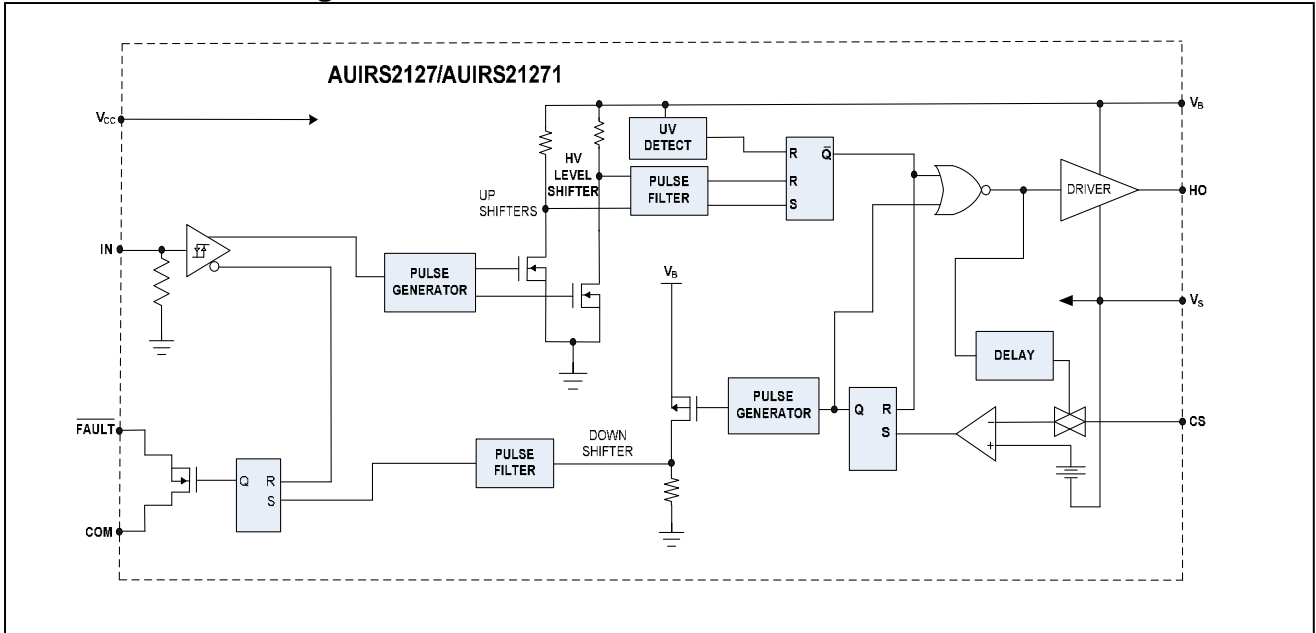

Dynamic Electrical Characteristic

Unless otherwise noted, these specifications apply for an operating junction temperature range of $-40^{\circ}\text{C} \leq T_j \leq 125^{\circ}\text{C}$ with bias conditions of $V_{\text{BIAS}} (V_{\text{CC}}, V_{\text{BS}}) = 15 \text{ V}$, $C_{\text{L}} = 1000 \text{ pF}$.

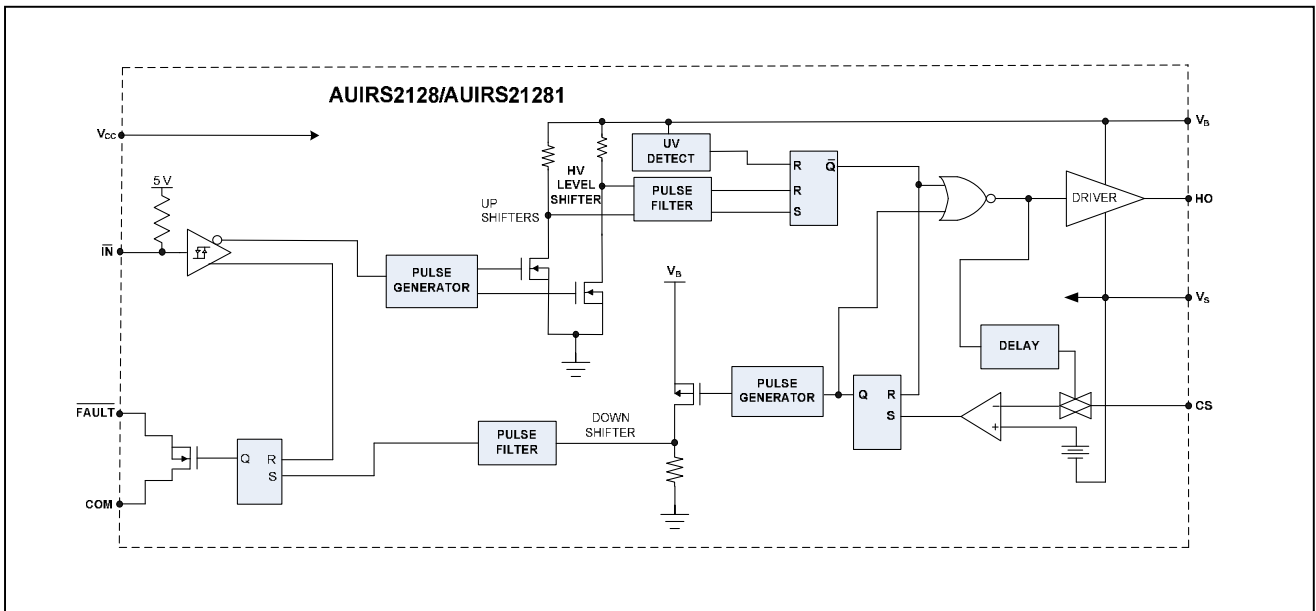

Symbol	Definition		Min	Typ	Max	Units	Test Conditions
t_{on}	Turn-on propagation delay		—	200	275	ns	$V_{\text{S}} = 0 \text{ V}$
t_{off}	Turn-off propagation delay		—	175	275		$V_{\text{S}} = 600 \text{ V}$
t_{r}	Turn-on rise time		—	80	130		
t_{f}	Turn-off fall time		—	40	65		
t_{bl}	Start-up blanking time		475	750	985		
t_{CS}	CS shutdown propagation delay		—	65	360		
t_{fit}	CS to FAULT pull-up propagation delay		—	270	510

Parameter Temperature Trends

Figures 6-33 provide information on the experimental performance of the AUIRS212(7, 71, 8, 81)S HVIC. The line plotted in each figure is generated from actual lab data.

A large number of individual samples were tested at three temperatures (-40 °C, 25 °C, and 125 °C) in order to generate the experimental curves. The line consists of three data points (one data point at each of the tested temperatures) that have been connected together to illustrate the understood trend. The individual data points on the curve were determined by calculating the averaged experimental value of the parameter (for a given temperature).

A different set of individual samples was used to generate curves of parameter trends vs. supply voltage.

IMPORTANT NOTICE

Unless specifically designated for the automotive market, International Rectifier Corporation and its subsidiaries (IR) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or services without notice. Part numbers designated with the "AU" prefix follow automotive industry and / or customer specific requirements with regards to product discontinuance and process change notification. All products are sold subject to IR's terms and conditions of sale supplied at the time of order acknowledgment.

IR warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with IR's standard warranty. Testing and other quality control techniques are used to the extent IR deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

IR assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using IR components. To minimize the risks with customer products and applications, customers should provide adequate design and operating safeguards.

Reproduction of IR information in IR data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alterations is an unfair and deceptive business practice. IR is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of IR products or serviced with statements different from or beyond the parameters stated by IR for that product or service voids all express and any implied warranties for the associated IR product or service and is an unfair and deceptive business practice. IR is not responsible or liable for any such statements.

IR products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or in other applications intended to support or sustain life, or in any other application in which the failure of the IR product could create a situation where personal injury or death may occur. Should Buyer purchase or use IR products for any such unintended or unauthorized application, Buyer shall indemnify and hold International Rectifier and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that IR was negligent regarding the design or manufacture of the product.

IR products are neither designed nor intended for use in military/aerospace applications or environments unless the IR products are specifically designated by IR as military-grade or "enhanced plastic." Only products designated by IR as military-grade meet military specifications. Buyers acknowledge and agree that any such use of IR products which IR has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

IR products are neither designed nor intended for use in automotive applications or environments unless the specific IR products are designated by IR as compliant with ISO/TS 16949 requirements and bear a part number including the designation "AU". Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, IR will not be responsible for any failure to meet such requirements.
