Recommended Filter Circuit

All the AM2LW-Z Series have been tested with the above recommended test circuit. This series should be tested under load.

If it is necessary to further decrease the input/output ripple, the value of the filter capacitor can be increased; a capacitor with a low ESR should be used. Excessive filter capacitance can cause start up problems with the converter.

In general, the recommended capacitance values are:

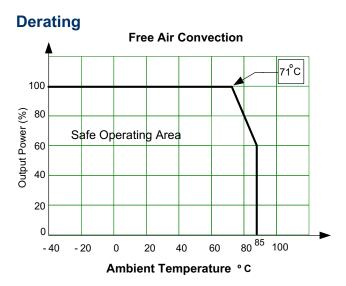

Cin: 10μF~47μF Cout: 10μF/100mA

Refer to table below for maximum capacitor values:

External Capacitor Value

Single Output Vout (VDC)	Cout (uF)	
5	1000	
12	470	
15	330
