MAGNETIC FIELD SENSORS

DESCRIPTION

The ZMZ20M is an extremely sensitive magnetic field sensor in a 4 pin E-line package employing the magneto-resistive effects of thin film Permalloy. It allows the measurement of magnetic fields or the detection of metallic parts. The sensor consists of a chip covered with Permalloy stripes which form a Wheatstone bridge, whose output voltage is proportional to the magnetic field component Hy. A perpendicular field Hx is necessary to suppress the hysteresis and this is provided by an internal permanent magnet.

Hx

E-LINE

FEATURES

- Output voltage proportional to magnetic field Hy
- Magnetic fields vertical to the chip level are not effective

APPLICATIONS

- Linear position sensors for process control, door interlocks, proximity detectors, machine tool sensing
- · Scalar measurement for compassing
- Automotive door switches, engine position and speed sensing
- · Metering of fluids by sensing rotation of impeller
- · Traffic counting & vehicle-type sensing
- Measurement of current in a conductor without connection
