Up to 128 I/O points

The control unit width is only 25 mm .984 inch*. Only 105 mm 4.134 inch even in combination with expansion units having a maximum of 128 I/O points

Up to three expansion units can be directly connected without connection cables.

* The width of the control unit with 32 I/O points and the S-LINK control unit is 30 mm 1.181 inch.
The control unit can fit in your pocket: W 25 × H 90 × D 60 mm W .984 × H 3.543 × D 2.362 inch
The number of I/O points can be expanded up to 128. Even with the maximum expansion, the size is only W 105 × H 90 × D 60 mm W 4.134 × H 3.543 × D 2.362 inch. The ultra-compact body size and installation area beyond comparison with the conventional compact PLCs facilitate the miniaturization of target machines, equipment, and control panels.

The expansion units can be directly connected to the control unit with a simple operation using the expansion connector and lock lever on the unit side. Dedicated cables or motherboards are not necessary for expansion.

FP0 Features

Equipped with 2-axis independent positioning, high-speed counter and PWM output

● Pulse output function (For transistor output type only)

The FP0 comes equipped with 2 channels of pulse output up to 10 kHz (5 kHz during 2-channel output). Since these two channels can be separately controlled, the FP0 is also suitable for 2-axis independent positioning. Setting for automatic trapezoid control, automatic return to home position and JOG operation are very easy, by using special instructions.

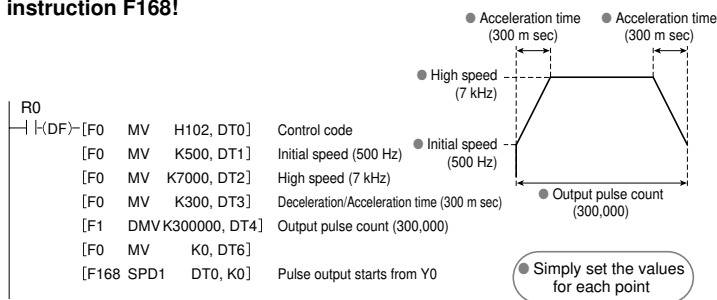

● High-speed counter function

The high-speed counter is prepared for 4 channels in single phase, and 2 channels in 2-phase. In single phase, the 4-channel total is 10 kHz, and in 2-phase the 2-channel total is 2 kHz total speed, making the unit suitable for inverter control, and so forth.

Position control is a breeze with the auto trapezoid control instruction F168!

● PWM output function

(For transistor output type only)

Its PWM output (Pulse Width Modulation output) function makes it possible to provide temperature control with a single compact FP0 unit.

● When pulse width values are increased...

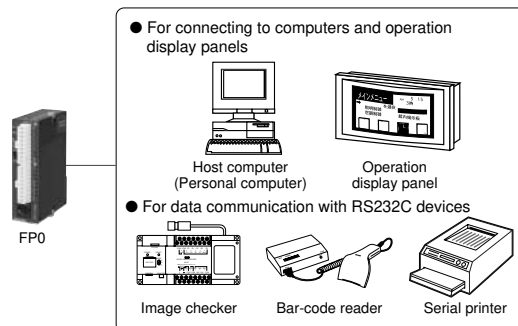

● When reduced...

RS232C port enables serial communications. (Product No. C10CR, C14CR, C16CT, C32CT, T32CT, SL1)

* The port block is connected by three S.R.G. terminals. Operation display panels can also be connected using the tool port.
 * RS232C port is equipped on the control units for both relay types and transistor output types.

Wide variety of analog units available

Connecting an FP0 to the FP Web-Server unit with an RS232C cable and then setting up using the dedicated software (FP Web Configurator Tool) makes surveillance possible of the FP0 running conditions from a PC Web browser.

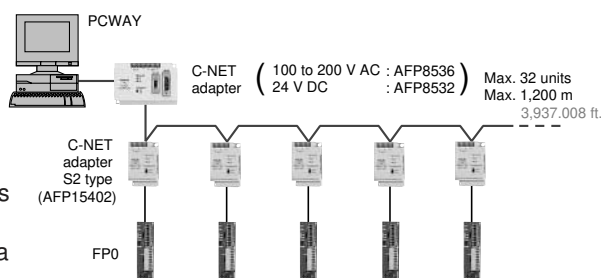

By using C-NET, you can use multiple FP0s as data collection terminals.

By using the C-NET network and exclusive adapters, you can connect multiple FP0s by multi-drop connection with 2-wire cables. You can use computers for distributed control or have network terminals for a centralized management system.

● PCWAY

The Excel add-in software 'PCWAY' is available for data collection of the networked PLCs. PLC status and data registers value can be simply shown and managed on Excel worksheets, which also makes it possible to transmit Email when malfunctions occur or to make status inquiries.

- Notes
- 1) The measurement range available for degree Celsius is not available for degree Fahrenheit, of which the upper-limit measurement is set lower than degree Celsius, since the digital value (temperature value displayed) for degree Fahrenheit is bigger than that for degree Celsius.
 - 2) When the thermocouple is broken, the digital value will become K8000 or K16000 within 70 seconds since broken. Practice in the ladder program a process for avoiding a risk, would be resulting from a broken thermocouple, and exchange the thermocouple.
 - 3) Until the conversion data will be ready after the initial startup was made, the digital value shows K8001 or K16001. Those are not a temperature data. Create a ladder program, so that they are not acquired as a temperature data.
 - 4) The settings of the input channel selection switch.
 - 5) Conversion values for 6-time measurements (6 from the latest 8 measurements, excluding the max. and min.) are averaged, so that it takes time for the digital value to be displayed due to the rapid temperature change.
 - 6) The control unit reads the data for 2 channels per 1 scan by the control unit. Read data by utilizing the sample program given in the product specifications and manual.
