

SOLUTIONS FOR RAPID PROTOTYPING

Answering the Needs of Practicing Engineers

Analog Devices participates in many vibrant hardware and software ecosystems, from Arduino to Pmod. Rapidly make your prototype and test your concepts. ADI's reference designs support many different applications and technologies, and include everything from hardware to embedded firmware that makes it easier for engineers to get their product concepts up and running fast.

Arduino Shields

Arduino shields are a popular hardware form factor that was first standardized by Arduino, and typically refer to being mechanically and electrically compatible with the Arduino Uno Rev 3 board. Many different FPGA, microprocessor, and DSP vendors provide plug and play connectivity into their development boards and environments using this form factor. Arduino shields provide analog and digital pins to configure devices and digitize signals coming from the real world. The digital communications protocols supported by Arduino shields are SPI, I²C, UART, PWM, and GPIO. All the below boards are compatible with either the [EVAL-ADICUP360](#) or [EVAL-ADICUP3029](#) and should work with any compatible Arduino form factor microcontroller platform. All software is open source and can be found on github.com/analogdevicesinc/.

Arduino Form Factor Microcontroller Board

Arduino has changed expectations for the industry and end users. It's now more important than ever to be able to interface with popular standards and pinouts so that users can easily and quickly prototype and evaluate different solution combinations. Using some of ADI's popular ARM® Cortex®-M3 microcontrollers with intriguing analog and digital functionality, we've created development platforms based on these features to enable customer designs. Using open-source ecosystems and tools, these development platforms offer customers a low cost solution that enables maximum reuse from industry standards, as well as open-source licensing for all the software, allowing customers to get to market faster with their solutions.
