

# High-accuracy EPROM Programmable Single-PLL Clock Generator

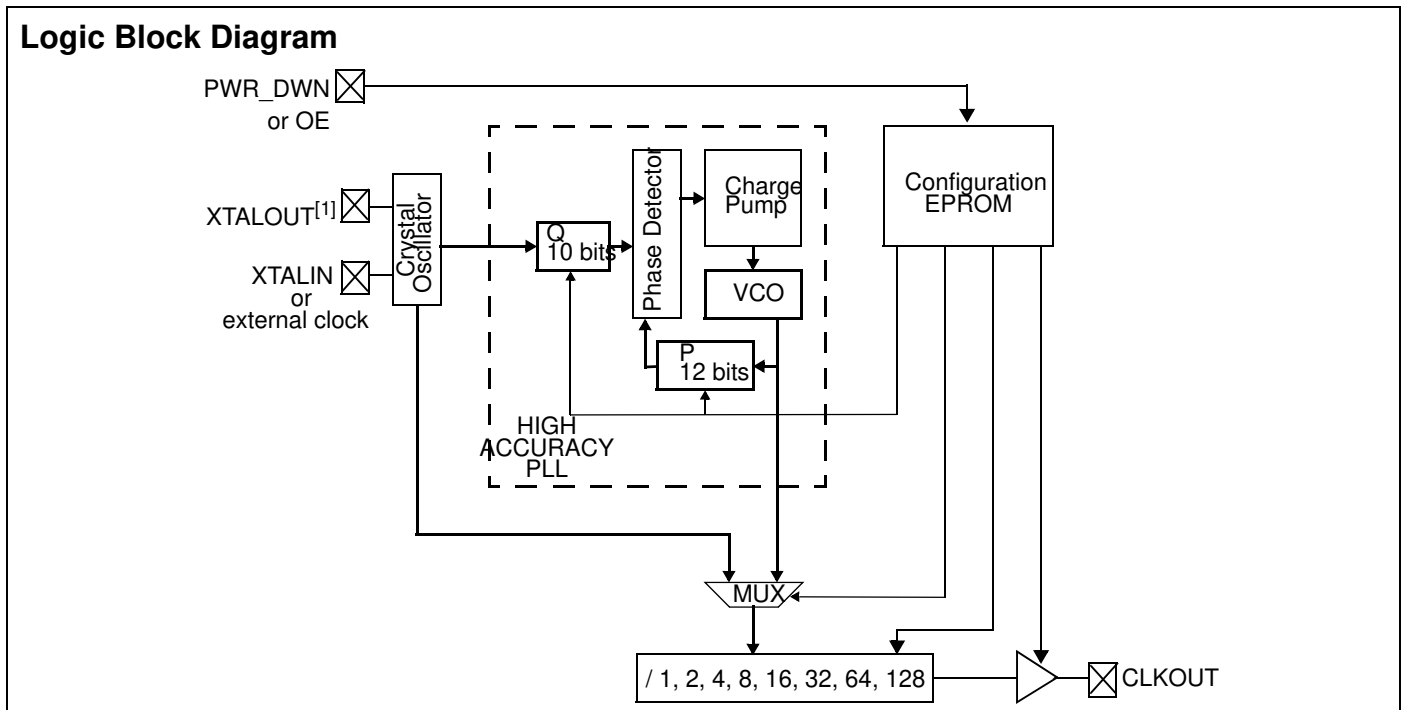

## Features

- High-accuracy PLL with 12-bit multiplier and 10-bit divider
- EPROM programmability
- 3.3V or 5V operation
- Operating frequency
  - 390 kHz–133 MHz at 5V
  - 390 kHz–100 MHz at 3.3V
- Reference input from either a 10–30 MHz fundamental toned crystal or a 1–75 MHz external clock
- EPROM selectable TTL or CMOS duty cycle levels
- Sixteen selectable post-divide options, using either PLL or reference oscillator/external clock
- Programmable PWR\_DWN or OE pin, with asynchronous or synchronous modes
- Low jitter outputs typically
  - 80 ps at 3.3V/5V
- Controlled rise and fall times and output slew rate
- Available in both commercial and industrial temperature ranges
- Factory programmable device options

## Benefits

- Enables synthesis of highly accurate and stable output clock frequencies with zero PPM
- Enables quick turnaround of custom frequencies
- Supports industry standard design platforms
- Services most PC, networking, and consumer applications
- Lowers cost of oscillator as PLL can be programmed to a high frequency using either a low-frequency, low-cost crystal, or an existing system clock
- Duty cycle centered at 1.5V or  $V_{DD}/2$
- Provides flexibility to service most TTL or CMOS applications
- Provides flexibility in output configurations and testing
- Enables low-power operation or output enable function and flexibility for system applications, through selectable instantaneous or synchronous change in outputs
- Suitable for most PC, consumer, and networking applications
- Has lower EMI than oscillators
- Suitable to fit most applications
- Easy customization and fast turnaround

## Logic Block Diagram

**Note**

1. When using an external clock source, leave XTALOUT floating.

## Pinouts

Figure 1. Pin Diagram - 8 Pin Top View

Table 1. Pin Definition - 8 Pin

Pin Name	Pin #	Pin Description
V <sub>DD</sub>	1	Voltage supply
V <sub>SS</sub>	5,6,7	Ground (all the pins must be grounded)
X <sub>D</sub>	2	Crystal output (leave this pin floating when external reference is used)
X <sub>G</sub>	3	Crystal input or external input reference
PWR_DWN / OE	4	EPROM programmable power down or output enable pin. PWR_DWN is active low. OE is active high. Weak pull up.
CLKOUT	8	Clock output. Weak pull down

## Functional Description

CY2077 is an EPROM-programmable, high-accuracy, general-purpose, PLL-based design for use in applications such as modems, disk drives, CD-ROM drives, video CD players, DVD players, games, set-top boxes, and data/telecommunications.

CY2077 can generate a clock output up to 133 MHz at 5V or 100 MHz at 3.3V. It has been designed to give the customer a very accurate and stable clock frequency with little to zero PPM error. CY2077 contains a 12-bit feedback counter divider and 10-bit reference counter divider to obtain a very high resolution to meet the needs of stringent design specifications. Furthermore, there are eight output divide options of /1, /2, /4, /8, /16, /32, /64, and /128. The output divider can select between the PLL and crystal oscillator output/external clock, providing a total of 16 different options to add more flexibility in designs. TTL or CMOS duty cycles can be selected.

Power management with the CY2077 is also very flexible. The user can choose either a PWR\_DWN, or an OE feature with which both have integrated pull up resistors. PWR\_DWN and OE signals can be programmed to have asynchronous and synchronous timing with respect to the output signal. There is a weak pull down on the output that pulls CLKOUT LOW when either the PWR\_DWN or OE signal is LOW. This weak pull down can easily be overridden by another clock signal in designs where multiple clock signals share a signal path.

Multiple options for output selection, better power distribution layout, and controlled rise and fall times enable the CY2077 to

be used in applications that require low jitter and accurate reference frequencies.

## EPROM Configuration Block

Table 2. EPROM Adjustable Features

EPROM Adjustable Features	
Adjust Freq.	Feedback counter value (P)
	Reference counter value (Q)
	Output divider selection
Duty cycle levels (TTL or CMOS)	
Power management mode (OE or PWR_DWN)	
Power management timing (synchronous or asynchronous)	

## PLL Output Frequency

CY2077 contains a high-resolution PLL with 12-bit multiplier and 10-bit divider.<sup>[2]</sup> The output frequency of the PLL is determined by the following formula:

$$F_{PLL} = \frac{2 \cdot (P + 5)}{(Q + 2)} \cdot F_{REF}$$

where P is the feedback counter value and Q is the reference counter value. P and Q are EPROM programmable values.

The calculation of P and Q values for a given PLL output frequency is handled by the CyberClocks™ software. Refer to “Programming Procedures” on page 12” for details.

### Note

- When using CyClocks, note that the PLL frequency range is from 50 MHz to 250 MHz for 5V V<sub>DD</sub> supply, and 50 MHz to 180 MHz for 3V V<sub>DD</sub> supply. The output frequency is determined by the selected output divider.

## Power Management Features

PWR\_DWN and OE options are configurable by EPROM programming for the CY2077. In PWR\_DWN mode, all active circuits are powered down when the control pin is set LOW. When the control pin is set back HIGH, both the PLL and oscillator circuit must relock. In the case of OE, the output is three-stated and weakly pulled down when the control pin is set LOW. The oscillator and PLL are still active in this state, which leads to a quick clock output return when the control pin is set back HIGH.

Additionally, PWR\_DWN and OE can be configured to occur asynchronously or synchronously with respect to CLKOUT. In asynchronous mode, PWR\_DWN or OE disables CLKOUT immediately (allowing for logic delays), without respect to the current state of CLKOUT. Synchronous mode prevents output glitches by waiting for the next falling edge of CLKOUT after PWR\_DWN, or OE becomes asserted. In either asynchronous or synchronous setting, the output is always enabled synchronously by waiting for the next falling edge of CLKOUT.

**Table 3. Device Functionality: Output Frequencies**

Symbol	Description	Condition	Min	Max	Unit
Fo	Output frequency	V <sub>DD</sub> = 4.5–5.5V	0.39	133	MHz
		V <sub>DD</sub> = 3.0–3.6V	0.39	100	MHz

## Absolute Maximum Ratings

Exceeding maximum ratings may shorten the useful life of the device. User guidelines are not tested.

Storage temperature (non-condensing)..... –55°C to +150°C  
 Junction temperature..... 150°C  
 Static discharge voltage..... ≥ 2000V  
 (per MIL-STD-883, method 3015)

Supply voltage ..... –0.5 to +7.0V  
 Input voltage ..... –0.5V to V<sub>DD</sub> +0.5V

## Operating Conditions for Commercial Temperature Device

Parameter	Description	Min	Max	Unit
V <sub>DD</sub>	Supply voltage	3.0	5.5	V
T <sub>A</sub>	Operating temperature, ambient	0	+70	°C
C <sub>TTL</sub>	Max. capacitive load on outputs for TTL levels			
	V <sub>DD</sub> = 4.5 – 5.5V, output frequency = 1 – 40 MHz		50	pF
	V <sub>DD</sub> = 4.5 – 5.5V, output frequency = 40 – 125 MHz		25	pF
	V <sub>DD</sub> = 4.5 – 5.5V, output frequency = 125 – 133 MHz		15	pF
C <sub>CMOS</sub>	Max. capacitive load on outputs for CMOS levels			
	V <sub>DD</sub> = 4.5 – 5.5V, output frequency = 1 – 40 MHz		50	pF
	V <sub>DD</sub> = 4.5 – 5.5V, output frequency = 40 – 125 MHz		25	pF
	V <sub>DD</sub> = 4.5 – 5.5V, output frequency = 125 – 133 MHz		15	pF
	V <sub>DD</sub> = 3.0 – 3.6V, output frequency = 1 – 40 MHz		30	pF
	V <sub>DD</sub> = 3.0 – 3.6V, output frequency = 40 – 100 MHz		15	pF
X <sub>REF</sub>	Reference frequency, input crystal with C <sub>load</sub> = 10 pF	10	30	MHz
	Reference frequency, external clock source	1	75	MHz
t <sub>PU</sub>	Power up time for all VDD's to reach minimum specified voltage (power ramps must be monotonic)	0.05	50	ms

## Electrical Characteristics

Figure 9. Duty Cycle vs.  $V_{DD}$  over Temperatures

Figure 10. Duty Cycle vs. Output Load

Figure 11. Duty Cycle vs. Output Frequency over Temperatures

**Note**

9. Duty cycle is measured at 1.4V for TTL output and 0.5  $V_{DD}$  for CMOS output.

Typical Jitter Trends for CY2077

Figure 12. Period Jitter (pk-pk) vs.  $V_{DD}$  over Temperatures

Figure 13. Period Jitter (pk-pk) vs. Output Frequency over Temperatures

## Programming Procedures

Currently the CY2077 is available only as a field-programmable device, as indicated by an “F” in the ordering code.

Devices may be programmed using the CY3670 programmer, or through programmers available from third party programmer manufacturers such as Hi-Lo Systems and BP Micro. Programming services are also available from third parties, including some Cypress distribution partners.

To generate a JEDEC format programming file, customers must use CyClocks software. This software automatically calculates the output frequencies that can be generated by

CY2077 devices. The CyClocks software is a subset of the larger software tool CyberClocks, which is available free of charge from the Cypress web site (<http://www.cypress.com>). CyberClocks is installed on a PC and must not be confused with the web-based application CyberClocks Online.

For high volume designs, factory programming of customer-specific configurations is available on other 8-pin devices such as the CY22180, CY22801 and CY22381. Factory programming is no longer offered for new designs using the CY2077.

## Ordering Information

Order Code <sup>[11]</sup>	Package Name	Package Type	Operating Temp. Range	Operating Voltage
<b>Pb-Free</b>				
CY2077FSXC	S8	8-pin SOIC	Commercial (T = 0°C to 70°C)	3.3V or 5V
CY2077FSXCT	S8	8-pin SOIC–Tape and Reel	Commercial (T = 0°C to 70°C)	3.3V or 5V
CY2077FZZ	Z8	8-pin TSSOP	Commercial (T = 0°C to 70°C)	3.3V or 5V
CY2077FZXI	Z8	8-pin TSSOP	Industrial (T = –40°C to 85°C)	3.3V or 5V
CY2077FZXIT	Z8	8-pin TSSOP–Tape and Reel	Industrial (T = –40°C to 85°C)	3.3V or 5V

**Table 4. Obsolete or Not For New Designs**

Original Device		Replacement Device	
Order Code <sup>[10, 11]</sup>	Description	Order Code	Description
CY2077SC-xxx		none	
CY2077SC-xxxT		none	
CY2077SI-xxx		none	
CY2077SI-xxxT		none	
CY2077SXC-xxx		none	
CY2077SXC-xxxT		none	
CY2077ZC-xxx		none	
CY2077ZC-xxxT		none	
CY2077ZI-xxx		none	
CY2077ZI-xxxT		none	
CY2077ZXC-xxx		none	
CY2077ZXC-xxxT		none	
CY2077FSI	SOIC, Industrial (T = –40°C to 85°C)	CY2077FSXC	Pb-free SOIC, Commercial
CY2077FZ	TSSOP, Commercial (T = 0°C to 70°C)	CY2077FZZ	Pb-free TSSOP, Commercial
CY2077FZI	TSSOP, Industrial (T = –40°C to 85°C)	CY2077FZXI	Pb-free TSSOP, Industrial
CY2077FS	SOIC, Commercial (T = 0°C to 70°C)	CY2077FSXC	Pb-free SOIC, Commercial

### Notes

10. The CY2077SC-xxx(T), CY2077SI-xxx(T), CY2077SXC-xxx(T), CY2077ZC-xxx(T), CY2077ZI-xxx(T) and CY2077ZXC-xxx(T), are factory programmed configurations. Factory programming is available for high-volume design opportunities. For more details, contact your local Cypress FAE or Cypress Sales Representative.
11. The CY2077F are field programmable. For more details, contact your local Cypress FAE or Cypress Sales Representative.

## Document History Page

Document Title: CY2077 High-accuracy EPROM Programmable Single-PLL Clock Generator Document Number: 38-07210				
REV.	ECN	Orig. of Change	Submission Date	Description of Change
**	111727	DSG	02/07/02	Convert from Spec number: 38-01009 to 38-07210
*A	114938	CKN	07/24/02	Added table and notes to page 11
*B	121843	RBI	12/14/02	Power up requirements added to Operating Conditions Information
*C	2104546	PYG/KVM /AESA	See ECN	Updated Ordering Information table Replaced the "Custom Configuration Request Procedure" section with "Programming Procedures" Updated package diagrams
*D	2631183	KVM/AESA	01/06/09	Updated template. CY2077FS removed from the active part number table. Added CY2077FZXI and CY2077FZXIT to the Ordering Information table. Corrected wording on p. 2 about when the weak output pull-down is active. Added to Table 1 to indicate that PWR_DWN is active low and OE is active high.

## Sales, Solutions, and Legal Information

### Worldwide Sales and Design Support

Cypress maintains a worldwide network of offices, solution centers, manufacturer's representatives, and distributors. To find the office closest to you, visit us at [cypress.com/sales](http://cypress.com/sales).

### Products

PSoC	<a href="http://psoc.cypress.com">psoc.cypress.com</a>
Clocks & Buffers	<a href="http://clocks.cypress.com">clocks.cypress.com</a>
Wireless	<a href="http://wireless.cypress.com">wireless.cypress.com</a>
Memories	<a href="http://memory.cypress.com">memory.cypress.com</a>
Image Sensors	<a href="http://image.cypress.com">image.cypress.com</a>

### PSoC Solutions
