

## MS52XX

### SMD Pressure Sensor

#### SPECIFICATIONS

- 1, and 12 bar absolute pressure range
- Uncompensated
- Piezoresistive silicon micromachined sensor
- Surface mount 7.6 x 7.6 mm
- Low-noise, high-sensitivity, high-linearity

The MS52XX SMD pressure sensor series is designed for pressure systems with the highest demands on resolution and accuracy. The device consists of a silicon micromachined pressure sensor die mounted on a 7.6 x 7.6 mm ceramic carrier protected by a metal cap. The MS52XX can be delivered in a highly-sensitive version giving a maximal output voltage or in a highly-linear version giving a linear output voltage directly proportional to the applied pressure.

Full scale pressure	High Sensitivity Version			High Linearity Versions		
	Product code	Full scale span	Linearity	Product code	Full scale span	Linearity
1 bar	MS5201-AN	240 mV	±0.20 % FS	MS5201-BN	150 mV	±0.05 % FS
12 bar				MS5212-BM	150 mV	±0.05 % FS

SMD Pressure Sensor

### FEATURES

- Low-cost SMD ceramic package
- High-reliability, low-drift
- -40 °C to +125 °C operation range
- Optional: Gel protection against humidity and water

### APPLICATIONS

- Absolute pressure sensor systems
- High resolution altimeters, variometers
- Barometers
- Engine controls

### PIN CONFIGURATION

**PIN DESCRIPTION**

Pin Name	Pin No	Function
OUT-	1	Negative output voltage of Wheatstone bridge

## NOTES

- 1) Deviation at one half full-scale pressure from the least squares best line fit over pressure range.
- 2) Maximum difference of output voltage after 1 pressure cycle at any pressure within the operating pressure range.
- 3) Maximum difference in offset after one thermal cycle from -40°C to +125°C.
- 4) Same as 2) after 10 pressure cycles.
- 5) Slope of the end-point straight line from 25°C to 60°C.
- 6) Not 100% tested.

## APPLICATION INFORMATION

### GENERAL

The MS52XX is a miniaturized absolute pressure sensor series that has been designed for surface mounting applications. Its main advantages are the high reliability of the semiconductor sensor and a design which makes it suitable for applications requiring small-scale and cost-efficient solutions.

The sensor element of the MS52XX consists of a micromachined silicone membrane with borosilicate glass wafer-bonded under vacuum to the back-side for reference pressure. Implanted resistors make use of the piezo-resistive effect to sense pressure applied to the membrane. The sensor is mounted in a special process allowing best-offset stability making the part suitable for direct PCB assembly.

Typical applications for this miniaturized pressure sensor MS52XX are altitude measurements and the measurement of atmospheric reference pressure in medical and industrial equipment as well as in automotive and industrial applications, consumer electronics and pneumatics.

Full Scale Pressure	High Sensitivity Version (MS5201-AN)	High Linearity Versions (MS5201-BN and MS5212-BM)
1 bar	Variometer, altimeter, barometer	High end altimeter, medical instrumentation
12 bar		Pneumatic brake

### LIGHT SENSITIVITY

The MS52XX is sensitive to sunlight, especially to infrared light sources. This is due to the strong photo effect of silicon. As the effect is reversible there will be no damage, but the user has to take care that in the final product the sensor must not be exposed to direct light during operation. This can be achieved for instance by placing mechanical shielding with holes in such way that light cannot go through.

### CONNECTION TO PCB

The package outline of the module allows the use of a flexible PCB to connect it. This can be important for applications in watches and other special devices, and will also reduce mechanical stress on the device.

For applications subjected to mechanical shock, it is recommended to enhance the mechanical reliability of the solder junctions by covering the rim or the corners of MS52XX ceramic substrate with glue or Globtop-like material.

### SOLDERING

Please refer to the application note AN808 for all soldering issues.

### CLEANING

The MS52XX has been manufactured under cleanroom conditions. Each device has been inspected for the homogeneity and the cleanness of the silicone gel. It is therefore recommended to assemble the sensor under class 10'000 or better conditions. Should this not be possible, it is recommended to protect the sensor opening during assembly from entering particles and dust. To avoid cleaning of the PCB, solder paste of type "no-clean" shall be used. **Cleaning may damage the sensor.**
