3. How to Control via External MCU

3.1. How to Send AT Commands

3.1.1. UART Mode

- **When BT is NOT connected, for ALL commands**

1. Output low to **UART PD** pin to enable UART interface. Please keep it LOW during the whole time when sending AT commands.
2. Send any AT commands you want. **Please wait for at least 250 ms between sending each command.**

We recommend sending corresponding “Read” command right after the delay to know whether the writing is successful before moving on to step 3 to save your settings.

Please prolong the delay (over 250 ms) when writing or/and reading is not successful.

3. **Send command “ AT+RESET ” (not HW reset) to save all your settings.**
4. Output high or NC to **UART PD** pin to turn off UART interface.

- **When BT is connected, for following commands ONLY**

**Write: AT+RESET, AT+SLEEP, AT+DISCONNECT,
AT+SCANNEWSTART**

Read: AT?PHYMODE, AT?CONNECTRSSI, AT?ADCVALUE

1. Output low to **flash default** pin to enable the module to receive AT commands. Please keep it LOW during the whole time when sending AT commands.
2. Send “AT+RESET” or “AT+SLEEP” or “AT+DISCONNECT” or “AT+SCANNEWSTART” “AT?PHYMODE” or “AT?CONNECTRSSI” or “AT?ADCVALUE”.
3. Output high or NC to **flash default** pin to disable the module to receive the AT commands.

3.1.2. USB Mode

- **When BT is **NOT** connected, for ALL commands**

1. Send any AT commands you want through COM port software. **Please wait for at least 250 ms between sending each command.**

We recommend sending corresponding “Read” command right after the delay to know whether the writing is successful before moving on to step 2 to save your settings.

Please prolong the delay (over 250 ms) when writing or/and reading is not successful.

2. Send command “ **AT+RESET** ” (**not HW reset**) to save all your settings through COM port software.

- **When BT is connected, for following commands ONLY**

**Write: AT+RESET, AT+SLEEP, AT+DISCONNECT,
AT+SCANNEWSTART**

Read: AT?PHYMODE, AT?CONNECTRSSI, AT?ADCVALUE

1. Send “AT+COMMANDEN” to enter **command** mode when BLE is connected.
2. Send “AT+RESET” or “AT+SLEEP” or “AT+DISCONNECT” or “AT+SCANNEWSTART” or “AT?PHYMODE” or “AT?CONNECTRSSI” or “AT?ADCVALUE”.
3. Send “AT+COMMANDDIS” to go back to **data** mode when BLE is connected.

3.2. How to Return to Setting of Default Flash

*** Only when BT is NOT connected ***

*** Note that default baud rate is “9600bps,n,8,1”. For other default, please check [“2.3 Default Info”](#)**

● Use Hardware Method

1. Read [indicator](#) pin first to check if BT is *NOT* in connection.
2. Output a low pulse to [flash default](#) pin, then system will return to default setting.

● Use Software method

1. Output low to [UART PD](#) pin to enable UART interface. Please keep it LOW during the whole time when sending AT commands.
2. Send command “AT+DEFAULT”, then system will return to default setting.

3.3. Default Definition of Connect/ADV LED Status

● Central

Scan the paired device	 <p>1秒 1秒 (continue)</p> <p>1 sec ON / 1 sec OFF</p>
Scan all devices	 <p>0.1秒 0.1秒 (continue)</p> <p>0.1 sec ON / 0.1 sec OFF</p>

● Peripheral

Mode	LED Status
Advertising	 <p>0.5秒 0.5秒 (continue)</p> <p>0.5 sec ON / 0.5 sec OFF</p>

3.4. How to Start Scanning

This section describes how to start scanning using a physical button (hardware) or the AT Command (firmware) under various occasions. Before getting started, here are some notes applied to both methods.

- Each central device is only able to pair with 1 Peripheral.
- The device will be in idle directly when it is powered or not in BLE connection.
- A few criteria must be met in order to complete BLE connection:

	Under Paired Scanning	Under All-Devices Scanning
Base UUID	√	√
Service UUID	√	√
Device name	√	√
RSSI Threshold		√
Mac Address in Paired Record	√	
RF Data Rate	√	√

● Use Key/Button

START Scanning Paired Device --- (a)

- Press the button for less than 2 seconds and release it to start scanning paired device.

START Scanning All Devices --- (b)

- Press the button for 2 seconds or longer directly to start scanning all devices.

STOP Scanning Paired / All Device(s)

- Press the button for less than 2 seconds and release it to stop scanning. The device will be back to idle and go into deep sleep after a given a timeout (no timeout in default).

Device Status	How to Start Scanning	
	Paired Device	All Devices
Idle	(a) ¹	(b)
BLE Connection	Not Available	(b)
Scanning Paired Device	Not Available	(b)
Scanning All Devices	(a) ¹	Not Available

Remark 1: The device stays in idle when there is no paired record.

● Use AT Command

START Scanning Paired Device --- (a)

- Enter "AT+SCANOLDSTART" to start scanning paired device.

START Scanning All Devices --- (b)

- Enter "AT+SCANNEWSTART" to start scanning all devices.

STOP Scanning Paired / All Device(s)

- Enter "AT+SCANSTOP" to stop scanning. The device will be back to idle and go into deep sleep after a given timeout.

Device Status	How to Start Scanning	
	Paired Device	All Devices
Idle	(a)	(b)
BLE Connection	Not Available	(b)
Scanning Paired Device	Not Available	(b)
Scanning All Devices	(a)	Not Available

5.3. RF Layout Suggestion (aka Keep-Out Area)

Make sure to keep the “No Ground Pad” as wider as you can regardless of the size of your PCB.

No Ground Pad should be included in the corresponding position of the antenna in **EACH LAYER.**

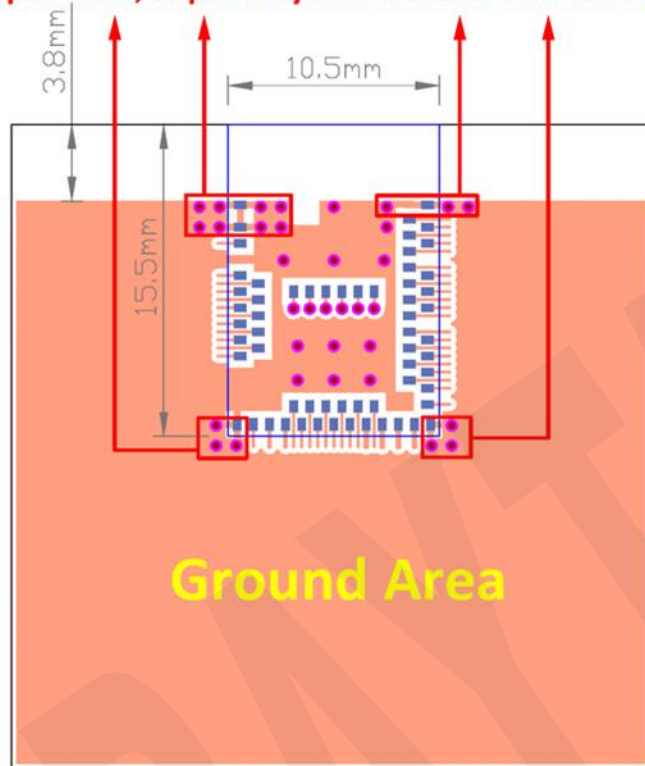

Place the module towards the edge of PCB to have better performance than placing it on the center.

Welcome to send us your layout in PDF for review at service@raytac.com or your contact at Raytac with title “Layout reviewing – Raytac Model No. – YOUR company’s name”.

Series	標籤樣式
MDBT50Q Series	
MDBT50Q-P Series	

以 MDBT50Q 為例，平台廠商必須於平台上標示字樣「本產品內含射頻模組：ID 編號 CCAM18LP0820T7」。

「平台」定義如下：若器材組裝本案模組，消費者仍能正常使用該器材主要功能，該器材得視為平台。若器材不組裝本案模組，消費者不能正常使用該器材主要功能，該器材不能視為平台。該類不同廠牌型號器材組裝本案審驗模組後，須分別申請型式認證。

12.10.4. IC (Canada)

The IC statement should be included in the user manual when there is not enough space on label. Otherwise, it should be included on the label.

“This device complies with Industry Canada license-exempt RSS Standard(s). Operation is subject to the following two conditions. (1) This device may not cause harmful interference. (2) This device must accept any interference received, including interference that may cause undesired operation.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.”

The final end product must be labeled in a visible area with the following: “Contain IC ID: 8017A-MDBT50Q”.

13. Notes and Cautions

Module is not designed to last for a lifetime. Like general products, it is expected to be worn out after continuous usage through the years. To assure that product will perform better and last longer, please make sure you:

- Follow the guidelines of this document while designing circuit/end-product. Any discrepancy of core Bluetooth technology and technical specification of IC should refer to definition of Bluetooth Organization and Nordic Semiconductor as final reference.
- Do not supply voltage that is not within range of specification.
- Eliminate static electricity at any cost when working with the module as it may cause damage. It is highly recommended adding anti-ESD components to circuit design to prevent damage from real-life ESD events. Anti-ESD methods can be also applied in mechanical design.
- Do not expose modules under direct sunlight for long duration. Modules should be kept away from humid and salty air conditions, and any corrosive gasses or substances. Store it within -40°C to $+125^{\circ}\text{C}$ before and after installation.
- Avoid any physical shock, intense stress to the module or its surface.
- Do not wash the module. No-Clean Paste is used in production. Washing it will oxidize the metal shield and have chemistry reaction with No-Clean Paste. Functions of the module are not guaranteed if it has been washed.

The module is not suitable for life support device or system and not allowed to be used in destructive device or systems in any direct or indirect ways. The customer agrees to indemnify Raytac for any losses when applying modules in applications such as the ones described above.
