**1 EVM Overview**

**1.1 Features**

- Full-featured, small form-factor EVM for the TLV320AIC3262 Audio Codec
- USB connection to the PC provides power, control, and streaming audio for quick and easy evaluation.
- Easy-to-use AIC3262 Control Software (CS) provides a graphical user interface to configure and control the TLV320AIC3262.

The TLV320AIC3262EVM-U is compatible with Windows™ XP-based personal computers.

**1.2 Introduction**

The TLV320AIC3262EVM-U is a USB audio device with programmable inputs and outputs, effects, and extensive routing capabilities. It is a simple platform to evaluate the TLV320AIC3262 miniDSP Audio Codec.

Figure 1. Top view of TLV320AIC3262EVM-U board

## 2 EVM Description and Getting Started

### 2.1 TLV320AIC3262EVM-U Hardware Description

**Table 1** summarizes the audio jacks available to connect analog inputs and outputs to the TLV320AIC3262 and the switches.

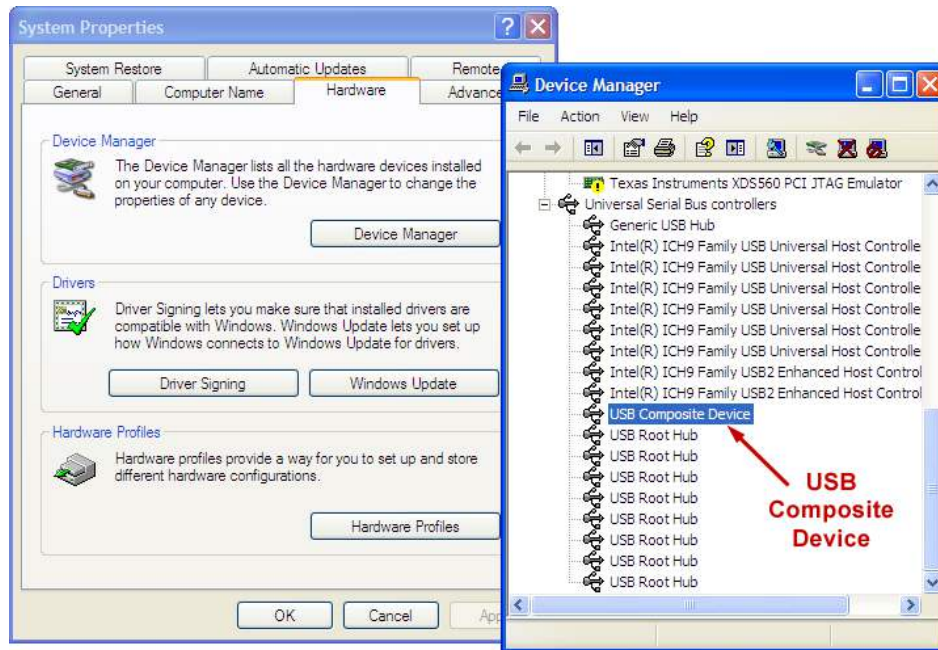

**Table 1. Audio Jacks Available to Connect Analog Inputs and Outputs**

Designator	Label	Associated pin	Description
J1	N/A	N/A	USB Mini-B jack
J2	MIC IN	IN2L/IN2R	Line input or electret-condenser microphone input. For Line output, W11 and W12 jumpers should be removed. To use electret-condenser microphones, install jumpers on W11 and W12; this connects 2.2kΩ pullup resistors to MICBIAS at both the tip and the ring.
J3	SPEAKER OUTPUTS	SPKLP/SPKLM/SPKRP/SPKRM	Stereo Class-D Speaker Outputs
J4	HP OUT	HPL/HPR	Headphone Output
J5	REC OUT	RECP/RECM	Receiver Output
J6	SAR REF VOLTAGE	VREF_SAR	External voltage supply for SAR
J7	SAR IN	IN1L/IN1R	SAR ADC Inputs
J11	CLASS D PWR INPUT	SLVDD/SRVDD/SPK_V	Connector for External Speaker Supply. To use external supply, set JP3 to 1-2 ("EXT") and JP2 to 1-2 ("EXT").
J19	LINE OUT	LOL/LOR	Line output. Connect only high-impedance loads to this output (e.g., external Class-D amplifier).
SW1	RESET	N/A	RESET switch
SW2	APP	N/A	Cycles through the applications loaded in the onboard EEPROM.
SW3	PATCH	N/A	Cycles through the patches loaded in the onboard EEPROM.
SW4	USB_RESET	N/A	USB_RESET

## 2.2 Getting Started

Evaluation can start right out of the box:

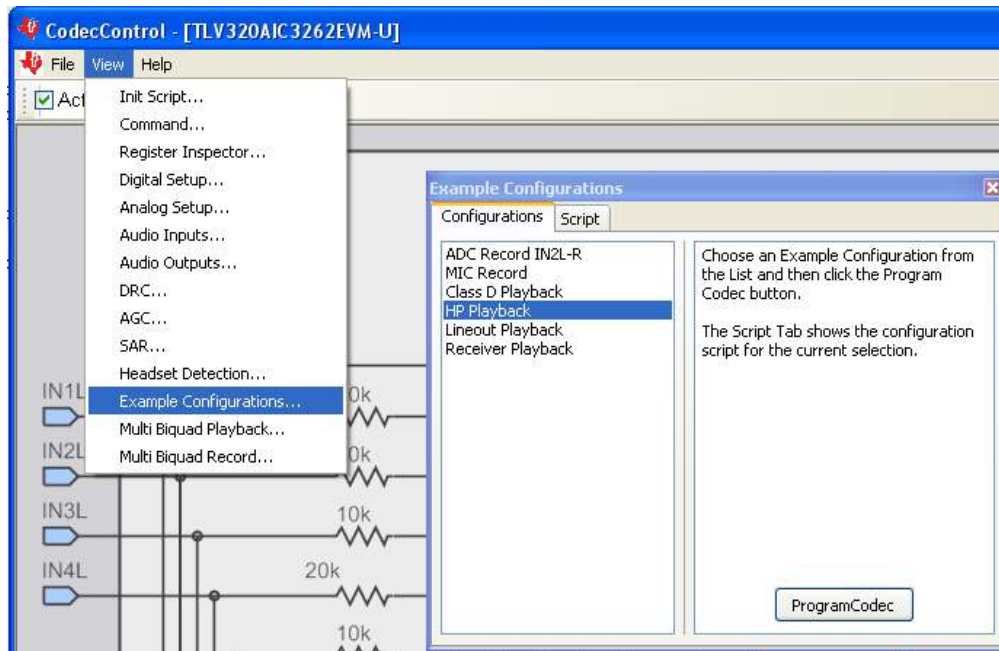

1. Install jumpers for TLV320AIC3262EVM-U (see [Section 7](#) for default jumper settings)
2. Download and install the TLV320AIC3262EVM-U Control Software from the EVM product folder. The password for installation is "CC".
3. Connect the TLV320AIC3262EVM to an available USB port. LED lights D1 and D2 should illuminate once the EVM is detected by PC. Also in the Windows device manager, the EVM should be recognized as "USB Composite Device".

**Figure 2. USB Connection**

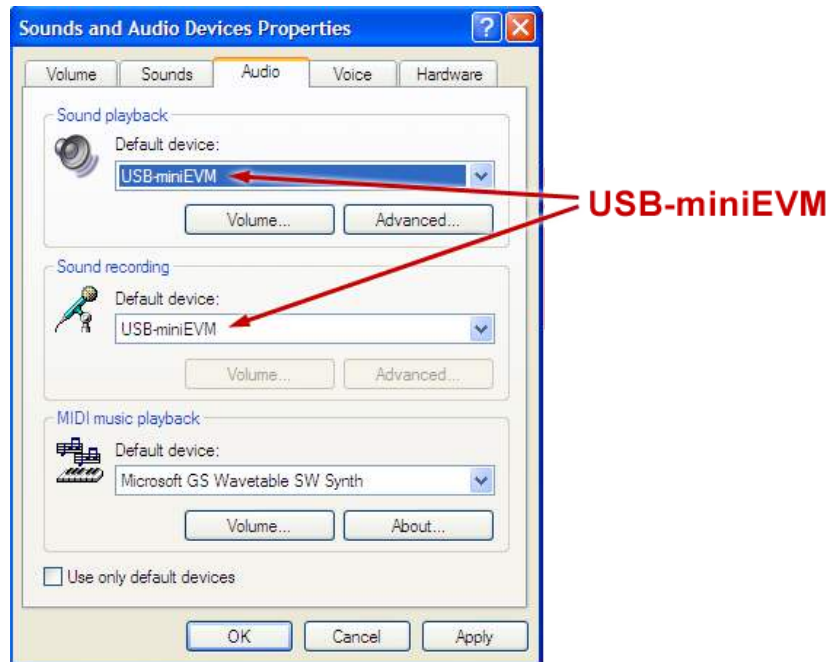

4. Connect stereo headphones at the headphone output (J4)

5. Open AIC3262 Control Software and select a typical headphone playback script, as shown in Figure 3.

**Figure 3. Using Example Configurations in Control Software**

6. Play audio through any media playback tool on your PC. Make sure the playback setup on the PC is through "USB-miniEVM".

To adjust playback volume, open "Sounds and Audio Devices Properties" in the control panel, and click the Volume button of the Sound playback section of the Audio tab. Ensure that "USB-miniEVM" is selected as the default playback and recording devices.

The following section explains the software installation procedure which allows programming of the audio device.

### 3 AIC3262 Control Software

The following sections describe the operation and installation of the AIC3262 control software.

#### 3.1 AIC3262EVM CS Setup

To install the TLV320AIC3262 EVM-U software:

1. Download the latest version of the AIC3262EVM-U Control Software (CS) located in the *TLV320AIC3262 Product Folder*.
2. Open the self-extracting installation file, and extract to a known folder.
3. In that folder, install the Software by double-clicking the "CC.exe" and follow the directions. The installation password is "CC".
4. Connect TLV320AIC3262EVM-U to PC through USB cable and open up TLV320AIC3262 Control Software. The software will then pop up a window called select EVM to prompt the user to choose the correct EVM name

### 3.2 Using the AIC3262EVM-U CS

The following sections describe the AIC3262EVM-U CS usage.

#### 3.2.1 Main Panel Window

The Main Panel window, shown in Figure 4, provides easy access to all the features of the AIC3262 CS.

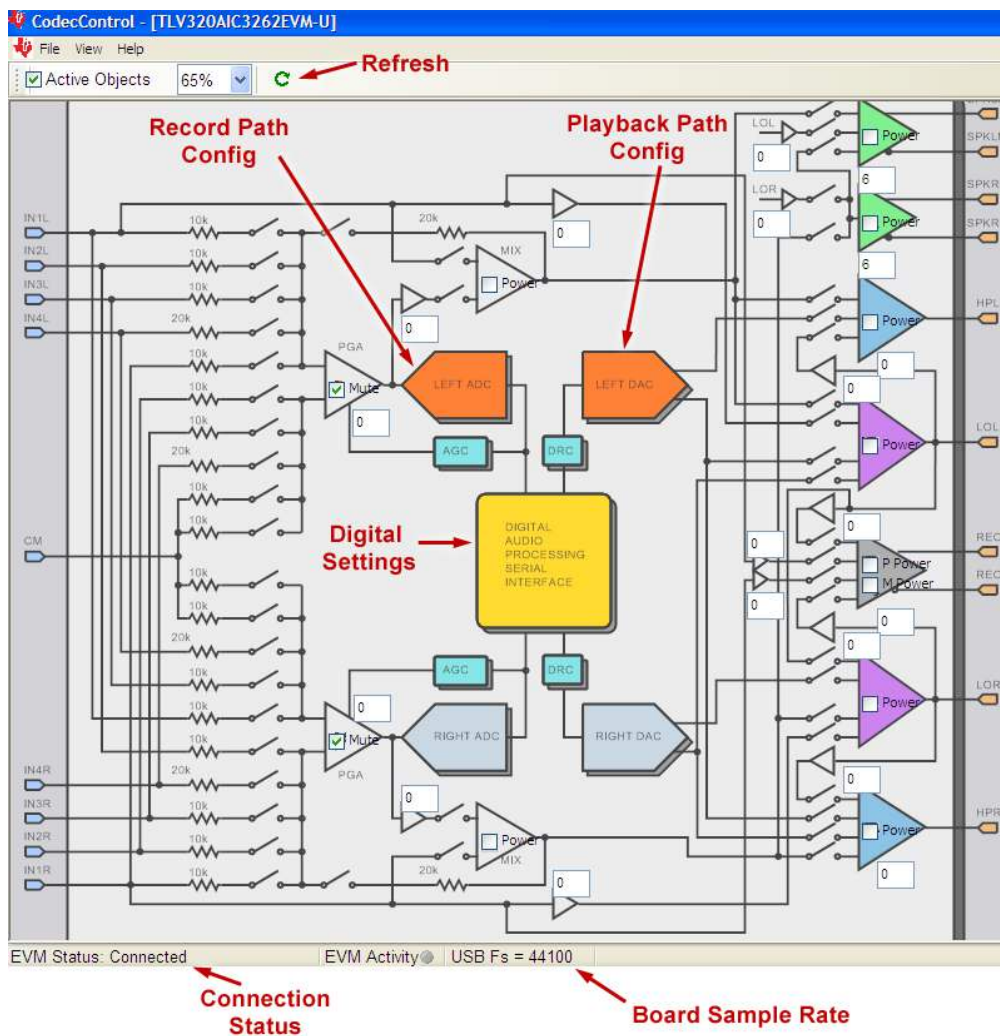

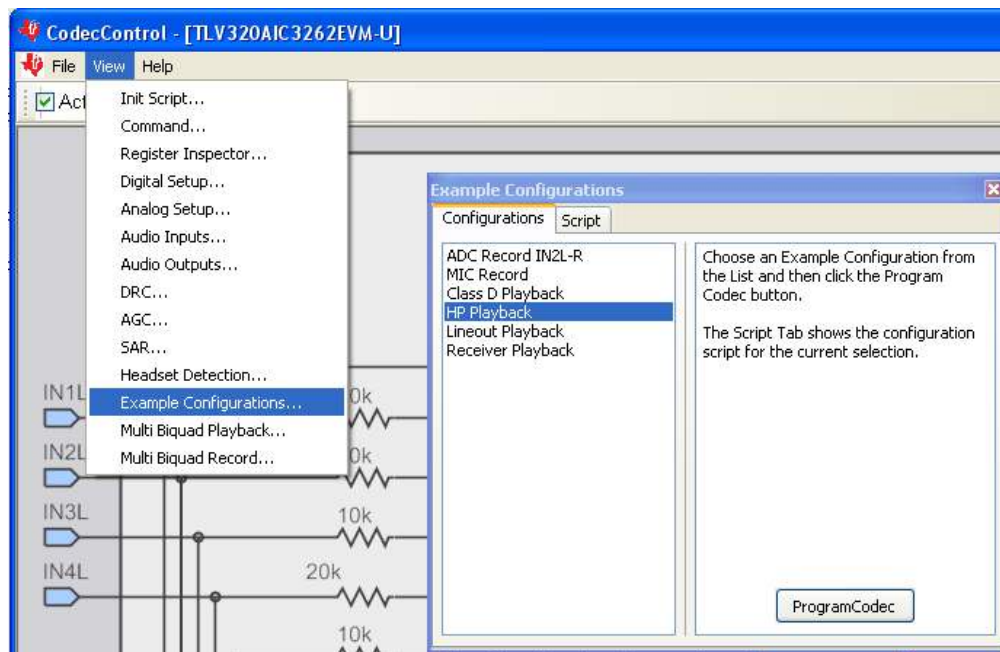

Figure 4. Main Panel Window

The main panel provides a high-level block diagram of the AIC3262. On the main panel, shown in Figure 4, users can configure the analog input and output routings by simply clicking on the switches. The analog setup, digital setup, audio inputs, audio outputs, DRC, AGC, SAR and headset detection provide additional control of many other features of the AIC3262. These categories are intended for advanced users and can be accessed by clicking “View” on the main panel. One can also click on the colored blocks on the main panel to gain access to these categories. Left ADC and Right ADC blocks provide detailed settings for recording path. Left DAC and Right DAC blocks provide detailed settings for playback path. Yellow block in the middle provides settings for digital interface, which includes Audio Serial Interface configuration, clock settings, etc.

Clicking “Refresh” button on the top will read back the current state of the AIC3262 register settings and reflect it to the user interface. “EVM status” on the bottom part of the main panel reflects the hardware connection of the EVM. “USB Fs” indicates the current sample rate of the EVM board.

### 3.2.2 Typical Configuration

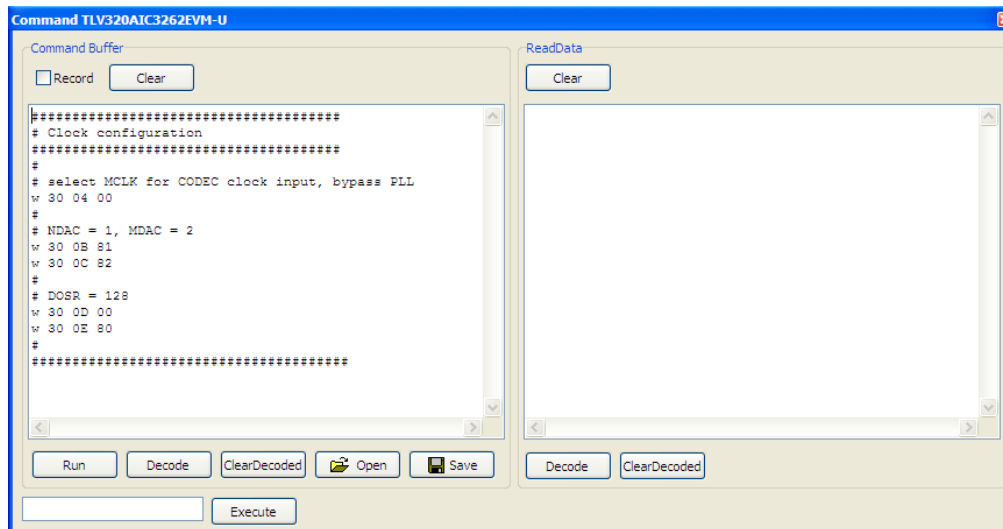

AIC3262 Control Software provides example scripts to typical playback and record application. These typical record and playback configurations can be accessed by choosing “Example Configuration...” under View. Once the typical configuration is selected, click “ProgramCodec” to download the script into EVM.

**Figure 5. Example Configurations Window**

### 3.2.3 Command-Line Interface Panel

**Figure 6. TLV320AIC3262 Control Software Command-Line Window**

The command-line interface provides a means to communicate with the TLV320AIC3262 using a simple scripting language (described in the [Section 8](#)). The TAS1020B USB controller handles all communication between the PC and the codec. A script is loaded into the command buffer, either by loading a script file using the “open” button or by pasting text from the clipboard. Click “Run” to execute the command buffer.

All controls update their status with respect to the register contents in the following conditions:

- A panel is open
- The “Run” button in the command-line interface is pressed
- The “Refresh” button on the main panel window is pressed

One feature in the command-line interface is the “Decode” function of the script. Clicking the “Decode” button on the command-line interface will decode the script line by line. This decode feature provides an easy means to understand the meaning of the script without referring to the register map. The decode content can be cleared by clicking “ClearDecode”.

**Figure 7. Decode Window**

Another feature in the command-line interface is the “Record” function. By checking the “Record” box, one can record the current value of the register that is being modified. The recorded register values along with their page numbers are displayed in the command buffer. The recorded register values can also be decoded by clicking the “Decode” tab on the command-line interface window. The content of the command buffer can be cleared by clicking “Clear” button.

### 3.2.4 Register Inspector Table

**Figure 8. Register Inspector Window**

The contents of TLV320AIC3262 register map can be accessed through the Register inspector table. The “Page” number control selects the page to be displayed in the register table. The register table contains information such as register name, current register value and the bit field of the current register value. While using the register inspect table, user should first specify the page number. Once the page is specified, user can inspect or change the register value by either entering the hex value of the register or changing the corresponding bits for that register.

## 4 PC Board Drawings

The working dimensions of the PCB as shown below are 165mm x 91.4mm (6.5 x 3.6 inches).

## 7 Default Jumper Positions

**Table 3. TLV320AIC3262EVM-U Default Jumper Positions**

Reference Designator	Default Position	Description
JP2	2-3	Supply for SRVDD
JP3	2-3	Supply for SLVDD
JP4	1-2	Selection between Record to USB and SRC Record
W1	Installed	AVDD3_33 Current Measurement
W2	Installed	HVDD Current Measurement
W3	2-3	Supply Selection for CPVDD_18
W4	2-3	Supply Selection for DVDD
W5	Installed	IOVDD Current Measurement
W6	2-3	Supply Selection for IOVDD
W7	Installed	AVDD_18 Current Measurement
W8	Installed	AVDD1_18 Current Measurement
W9	Installed	AVDD2_18 Current Measurement
W10	Installed	AVDD4_18 Current Measurement
W11	Installed	Internal MICBIAS
W12	Installed	Internal MICBIAS
W14	Open	Supply Selection for VBAT
W16	2-3	Input Configuration for IN1R
W17	2-3	Input Configuration for IN1L
W18	Installed	Jumper for MICDET
W19	2-3	I2C/SPI - Selection between SCL and /SS lines
W20	2-3	I2C/SPI - Selection between SDA and MOSI lines
W21	Open	I2C/SPI - Connection of MISO to GPO1 pin
W22	Open	I2C/SPI - Connection of SCLK to GPI1 pin
W23	2-3	Selection for External MCLK1
W24	1-2	Selection for External MCLK2
W25	2-3	Configuration for Audio Serial Interface #1 DIN1
W26	2-3	Configuration for Audio Serial Interface #1 BCLK1
W27	2-3	Configuration for Audio Serial Interface #1 DOUT1
W28	2-3	Configuration for Audio Serial Interface #1 WCLK1
W29	2-3	Configuration for Audio Serial Interface #2 DIN2
W30	2-3	Configuration for Audio Serial Interface #2 BCLK2
W31	2-3	Configuration for Audio Serial Interface #2 DOUT2
W32	2-3	Configuration for Audio Serial Interface #2 WCLK2
W33	2-3	Configuration for Audio Serial Interface #3 DIN3
W34	2-3	Configuration for Audio Serial Interface #3 BCLK3
W35	2-3	Configuration for Audio Serial Interface #3 DOUT3
W36	2-3	Configuration for Audio Serial Interface #3 WCLK3
W37	2-3	Configuration for Audio Serial Interface #4 DIN3
W38	2-3	Configuration for Audio Serial Interface #4 BCLK3
W39	2-3	Configuration for Audio Serial Interface #4 DOUT3
W40	2-3	Configuration for Audio Serial Interface #4 WCLK3
W41	Installed	Jumper to enable/disable Y2 Output Clock
W42	Installed	Jumper to enable/disable Y3 Output Clock
W43	Installed	Jumper to configure divider ratio of U12
W44	Installed	Jumper to configure divider ratio of U12

Table 3. TLV320AIC3262EVM-U Default Jumper Positions (continued)

Reference Designator	Default Position	Description
W45	1-2	Clock selection for SRC1_MCLK
W46	1-2	Clock selection for SRC2_MCLK
W47	Installed	Jumper for MICBIAS_EXT
W48	1-2	Selection for MCLK1
W49	Open	Selection for MCLK2
W51	2-3	6 wire I <sup>2</sup> S enable on GPI3
W52	1-2	Pull-up or Pull-down Selection for GPI3
W53	2-3	6 wire I2S enable on GPI4
W54	1-2	Pull-up or Pull-down Selection for GPI4
W55	1-2	Load Selection for Headphone HPL Output
W56	1-2	Load Selection for Headphone HPR Output
W57	1-2	Supply Selection for IOVDD
W60	Open	Headset Type Selection 1
W61	Open	Headset Type Selection 2

For 16-Ohm Load measurement, Set W55=1-2 and W56=1-2 (as shown above)

For 32-Ohm Load measurement, Set W55=2-3 and W56=2-3

Figure 23. Default Jumper Settings Layout

## 8 Writing Scripts

A script is simply a text file that contains data to send to the serial control buses.

Each line in a script file is one command. No provision is made for extending lines beyond one line, except for the > command. A line is terminated by a carriage return.

The first character of a line is the command. Commands are:

- l** Set interface bus to use
- r** Read from the serial control bus
- w** Write to the serial control bus
- >** Extend repeated write commands to lines below a **w**
- #** Comment
- b** Break
- d** Delay
- f** Wait for Flag

The first command, **l**, sets the interface to use for the commands to follow. This command must be followed by one of the following parameters:

<b>i2cstd</b>	Standard mode I <sup>2</sup> C bus
<b>i2cfast</b>	Fast mode I <sup>2</sup> C bus
<b>spi8</b>	SPI bus with 8-bit register addressing
<b>spi16</b>	SPI bus with 16-bit register addressing

For example, if a fast mode I<sup>2</sup>C bus is to be used, the script begins with:

```
l i2cfast
```

A double-quoted string of characters following the **b** command can be added to provide information to the user about each breakpoint. When the script is executed, the software's command handler halts as soon as a breakpoint is detected and displays the string of characters within the double quotes.

The Wait for Flag command, **f**, reads a specified register and verifies if the bitmap provided with the command matches the data being read. If the data does not match, the command handler retries for up to 200 times. This feature is useful when switching buffers in parts that support the adaptive filtering mode.

The command **f** syntax follows:

```
f [i2c address] [register] [D7][D6][D5][D4][D3][D2][D1][D0]
```

where 'i2c address' and 'register' are in hexadecimal format and 'D7' through 'D0' are in binary format with values of 0, 1 or X for don't care.<sup>8</sup>

Anything following a comment command **#** is ignored by the parser, provided that it is on the same line.

The delay command **d** allows the user to specify a time, in milliseconds, that the script pauses before proceeding. Note: The delay time is entered in decimal format.

A series of byte values follows either a read or write command. Each byte value is expressed in hexadecimal, and each byte must be separated by a space. Commands are interpreted and sent to the TAS1020B by the program.

The first byte following an **r** (read) or **w** (write) command is the I<sup>2</sup>C slave address of the device (if I<sup>2</sup>C is used) or the first data byte to write. (If SPI is used, note that SPI interfaces are not standardized on protocols, so the meaning of this byte varies with the device being addressed on the SPI bus.) The second byte is the starting register address that data will be written to (again, with I<sup>2</sup>C; SPI varies). Following these two bytes are data, if writing; if reading, the third byte value is the number of bytes to read, (expressed in hexadecimal).

For example, to write the values 0xAA 0x55 to an I<sup>2</sup>C device with a slave address of 0x30, starting at a register address of 0x03, the user writes:

```
#example script
I i2cfast
w 30 03 AA 55
r 30 03 02e
```

This script begins with a comment, specifies that a fast I<sup>2</sup>C bus is used, then writes 0xAA 0x55 to the I<sup>2</sup>C slave device at address 0x30, writing the values into registers 0x03 and 0x04. The script then reads back two bytes from the same device starting at register address 0x03. Note that the slave device value does not change. It is unnecessary to set the R $\bar{W}$  bit for I<sup>2</sup>C devices in the script; the read or write commands does that.

If extensive repeated write commands are sent and commenting is desired for a group of bytes, the > command can be used to extend the bytes to other lines that follow. A usage example for the > command follows:

```
#example script for '>' command
I i2cfast
# Write AA and BB to registers 3 and 4, respectively
w 30 03 AA BB
# Write CC, DD, EE and FF to registers 5, 6, 7 and 8, respectively
> CC DD EE FF
# Place a commented breakpoint
b "AA BB CC DD EE FF was written, starting at register 3"
# Read back all six registers, starting at register 3
r 30 03 06b
```

The following example demonstrates usage of the Wait for Flag command, f:

```
#example script for 'wait for flag' command
I i2cfast
# Switch to Page 44
w 30 00 2C
# Switch buffer
w 30 01 05
# Wait for bit D0 to clear. 'x' denotes a don't care.
f 30 01 xxxxxxx0
```

Any text editor can be used to write these scripts; jEdit is an editor that is highly recommended for general usage. For more information, go to: [www.jedit.org](http://www.jedit.org).

Once the script is written, it can be used in the command window by running the program, and then selecting *Open Script File...* from the File menu. Locate the script and open it. The script then is displayed in the command buffer. The user also can edit the script once it is in the buffer and save it by selecting *Save Script File...* from the File menu.

Once the script is in the command buffer, it can be executed by pressing the *Execute Command Buffer* button. If breakpoints are in the script, the script executes to that point, and the user is presented with a dialog box with a button to press to continue executing the script. When ready to proceed, the user pushes that button and the script continues.

## 9 Example Scripts

### 9.1 Headphone playback script

```

## Evaluation Board/Kit Important Notice

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. Persons handling the product(s) must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards. This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and therefore may not meet the technical requirements of these directives or other related directives.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

**EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

TI currently deals with a variety of customers for products, and therefore our arrangement with the user **is not exclusive.**

TI assumes **no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.**

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please contact the TI application engineer or visit [www.ti.com/esh](http://www.ti.com/esh).

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

## FCC Warning

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

## EVM Warnings and Restrictions

It is important to operate this EVM within the input voltage range of and the output voltage range of .

Exceeding the specified input range may cause unexpected operation and/or irreversible damage to the EVM. If there are questions concerning the input range, please contact a TI field representative prior to connecting the input power.

Applying loads outside of the specified output range may result in unintended operation and/or possible permanent damage to the EVM. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative.

During normal operation, some circuit components may have case temperatures greater than . The EVM is designed to operate properly with certain components above as long as the input and output ranges are maintained. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors. These types of devices can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during operation, please be aware that these devices may be very warm to the touch.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
