

DIN Rail-Mountable Sockets EMG...-SD and SD-.../(LA)

1. Description

DIN rail-mountable sockets in standard format are just as important in modern control cabinets as in simple power distribution systems.

The socket, mounted in an easily accessed position, provides a quick connection for assembly tools, servicing equipment, and other electrical equipment.

A 90 mm (3.543 in.) double socket is available in addition to the 45 mm (1.772 in.) standard socket to provide more connections in the control cabinet.

This socket stands out due to its compact structure. The connection terminals, which are protected against accidental contact, demonstrate the high standard of quality associated with Phoenix Contact. The mains connection terminals (L1, N, and PE) are provided on one side of the socket for easy connection. In addition, a device ID plate can be mounted on the housing.

The 45 mm (1.772 in.) socket is available with or without a fuse. The fuse is a 6.3 A, 5 x 20 mm (0.197 x 0.787 in.) glass fuse.

In parts of the system where equipment is still powered up after the main switch has been turned off, this equipment should be marked according to DIN VDE 0105-1 and IEC 204-1/EN 60 204-1/ DIN VDE 0113 Part 1 and German accident prevention regulation VBG 4. A socket version in yellow housing is provided for this type of application.

Both 45 mm (1.772 in.) standard and 90 mm (3.543 in.) double housing sockets can be quickly snapped onto the symmetrical DIN rail according to EN 50 022.

The contact protected sockets are available in the following cost-effective versions:

- Screw or spring-cage connection
- With or without LED
- Schuko, Belgian, French or USA version
- Green, yellow or light gray housing
