‡ Pressure applied on an SMA outer contact is extremely high; therefore inadequate torque of connector body will result in a slight deformation of the outer contact. Reflections will appear above 2GHz.

For phase array radar, test equipment, ILS landing systems and other instrumentation using phase matching techniques, these SMA connectors for semi-rigid coaxial cables and the SMA plug-to-Jack adapter offer a precise and simple means of phase adjustment for microwave devices.

Features/Benefits

- Connectors incorporate a threaded interconnection of variable length.
 - Adjustment nut creates incremental changes in connector length and angle.
 - Proper phase setting for each cable is maintained by connector locking-nuts.
- (For example, one revolution of the adjustment nut results in a phase angle change of 5.7° for a 9 GHz signal [0.636 x 9]°.)*
- Connectors provide ease of mechanical screw adjustments, compared to the delays and expense of laborious cable-trimming.
 - Allow phase matching to be performed at the final production stages.
