# LUXEON R

## High flux for outdoor applications

LUXEON R brings illumination grade LED light sources to outdoor and industrial lighting applications and makes it easier than ever to design LED solutions and bring them to market. With hot testing, every LUXEON R is tested and specified at real world operating conditions — 85°C. *Freedom from Binning* means that every LUXEON R LED falls within a single 5-step MacAdam ellipse centered in ANSI defined standard color spaces and now, luminaire manufacturers can be confident in color consistency from LED to LED. The superior quality of light, volume of lumens, and real world efficacy enable leading performance and efficient solution development in a wide variety of high bay, low bay and outdoor applications.

### FEATURES AND BENEFITS

5-step MacAdam color definition: *Freedom from Binning*

Identical footprint to LUXEON Rebel family and ecosystem for compatibility with existing designs

Hot tested at real world conditions which leads to better color accuracy

70CRI minimum and a full range of CCTs

### PRIMARY APPLICATIONS

# General Information

## Product Nomenclature

LUXEON R emitters are tested and binned “hot” under conditions comparable to those found in “real-world” lighting products. The test conditions for LUXEON R are 700mA D.C. with junction temperature at 85°C.

The part number designation for the LUXEON R emitters is explained as follows:

L X A 7 - P W x x

Where:

- 7 — designates minimum CRI performance (value 7 = 70 minimum)
- P — designates radiation pattern (value P for Lambertian)
- W — designates color (value W = White)
- xx — designates nominal ANSI CCT (value 30 = 3000K, 40 = 4000K, 50 = 5000K, 57 = 5700K, and 65 = 6500K)

## Lumen Maintenance

LUXEON R products are tested in compliance with LM-80. Please visit [www.lumileds.com](http://www.lumileds.com) or contact your local Lumileds Technical Solutions Manager for TM-21 extrapolations or other support.

## Environmental Compliance

Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON R is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS and REACH directives. Lumileds will not intentionally add the following restricted materials to the LUXEON R: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

Soldering Temperature	JEDEC O20c 260°C
Allowable Reflow Cycles	3
Reverse Voltage (Vr)	LUXEON R LEDs are not designed to be driven in reverse bias

Notes for Table 4:

1. Proper current derating must be observed to maintain junction temperature below the maximum. For additional information on thermal measurement guidelines please refer to Application Brief AB33.
2. Residual periodic variations due to power conversion from alternating current (AC) to direct current (DC), also called 'ripple', with frequencies  $\geq 100$  Hz and amplitude  $\leq 200mA$  are acceptable, assuming the average current throughout each cycle does not exceed 1000mA.
3. Pulsed operation with a peak drive current of 1200mA is acceptable if the pulse on-time is  $\leq 5$  ms per cycle and the duty cycle is  $\leq 50\%$ .

# Product Binning and Labeling

## Purpose of Product Binning

In the manufacturing of semiconductor products, there is a variation of performance around the average values given in the technical data sheets. For this reason, Lumileds bins the LED components for luminous flux and forward voltage ( $V_f$ ). Color is offered in a single 5-step MacAdam ellipse color space centered on the ANSI CCT color bins. For additional information please review the MacAdam ellipse technical definition section.

## Decoding Product Bin Labeling

LUXEON R emitters are labeled using a two digit alphanumeric code (CAT code) depicting the bin values for emitters packaged on a single reel. All emitters packaged within a reel are of the same 2-variable bin combination. Using these codes, it is possible to determine optimum mixing and matching of products for consistency in a given application.

Reels of LUXEON R emitters are labeled with a two digit alphanumeric CAT code following the format below.

AB

A = Flux bin (J, K, L, M, N, P and Q)

B =  $V_f$  bin (P, R, and S)

# Luminous Flux Bins

Table 7 lists the standard photometric luminous flux bins for LUXEON R emitters (tested and binned at 700mA D.C., Junction Temperature = 85°C. Minimum luminous flux performance within published operating conditions. Lumileds maintains a tolerance of  $\pm 6.5\%$  on luminous flux measurements.

Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all CCT's.

## About Lumileds

Companies developing automotive, mobile, IoT and illumination lighting applications need a partner who can collaborate with them to push the boundaries of light. With over 100 years of inventions and industry firsts, Lumileds is a global lighting solutions company that helps customers around the world deliver differentiated solutions to gain and maintain a competitive edge. As the inventor of Xenon technology, a pioneer in halogen lighting and the leader in high performance LEDs, Lumileds builds innovation, quality and reliability into its technology, products and every customer engagement. Together with its customers, Lumileds is making the world safer, better and more beautiful—with light.
