Precision Quad SPDT Analog Switch

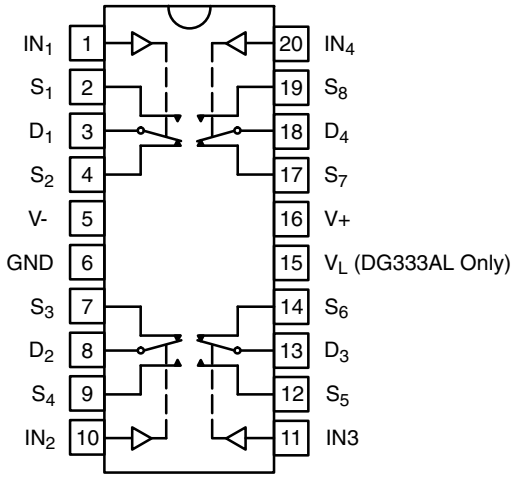
DESCRIPTION

The DG333A, DG333AL consist of four independently controlled single-pole double-throw analog switches. These monolithic switch is designed to control analog signals with a high degree of accuracy. The DG333A, DG333AL minimize measurement errors by offering low on-resistance (25 Ω typ), low leakage (20 pA typ.) and low charge injection performance. The DG333AL features micro-power operation (< 1 µW typ.). This is ideal for battery operated systems. Pin 15 is not connected on the DG333A.

An improved charge injection compensation design minimizes switching transients. These switches can handle up to ± 22 V signals and have an improved continuous current of 30 mA.

The DG333A, DG333AL is fabricated in Vishay Siliconix's proprietary HVSG-2 CMOS process, resulting in higher speed and lower power consumption. An epitaxial layer prevents latchup. Each switch conducts equally well in both directions when on. When off, they block voltages up to the power-supply levels.

DUAL-IN-LINE, WIDE-BODY SOIC AND TSSOP



Top View

FEATURES

- ± 22 V supply voltage range
- TTL and CMOS compatible logic
- Low on-resistance (25 Ω)
- On-resistance matched between channels (< 2 Ω)
- Flat on-resistance over analog signal range (Δ < 3 Ω)
- Low charge injection (1 pC)
- Low leakage (0.2 nA)
- Fast switching (175 ns)
- Single-supply operation (5 V to 40 V)
- ESD tolerance > 2 kV per 3015.x
- Low power (< 1 µA) - DG333A, DG333AL

BENEFITS

- Rail-to-rail analog signal range
- Simple logic interface
- High precision and accuracy
- Minimal transients
- Low distortion
- Reduced power consumption
- Improved reliability
- Break-before-make switching action

APPLICATIONS

- Audio switching
- Test equipment
- Portable instrumentation
- Communication systems
- PBX, PABX
- Computer peripherals
- Mass storage systems
- Switched-capacitor networks
- Battery-powered systems

TRUTH TABLE		
LOGIC	SW1, 4, 5, 8 NORMALLY OPEN	SW2, 3, 6, 7 NORMALLY CLOSED
0	OFF	ON
1	ON	OFF

Logic “0” ≤ 0.8 V
Logic “1” ≥ 2.4 V

ORDERING INFORMATION		
TEMP. RANGE	PACKAGE	PART NUMBER [a]
-40 °C to +85 °C	20-Pin Plastic DIP	DG333ADJ-E3
		DG333ALDJ-E3
	20-Pin Wide-Body SOIC (shipped in tubes)	DG333ADW-E3
		DG333ALDW-E3
	20-Pin Wide-Body SOIC (shipped in tape and reel)	DG333ADW-T1-E3
		DG333ALDW-T1-E3
	20-Pin TSSOP (shipped in tape and reel)	DG333ADQ-T1-E3
		DG333ALDQ-T1-E3

Note

a. For standard tin / lead external termination, remove the "-E3" from the ordering part number.

ABSOLUTE MAXIMUM RATINGS			
PARAMETER		LIMIT	UNIT
Voltages Referenced V+ to V-		44	V
GND		30	
V+ to GND		40	
Digital Inputs [a] V_S, V_D		(V-) - 2 to (V+) + 2 or 30 mA, whichever occurs first	
Current, Any Terminal		30	mA
Peak Current S or D (Pulsed at 1 ms, 10 % Duty Cycle max.)		100	
Storage Temperature		-65 to +125	°C
Power Dissipation (Package) [b]	20-Pin Plastic DIP [c]	890	mW
	20-Pin Wide SOIC [d]	800	

Notes

a. Signals on S_X, D_X, or IN_X exceeding V+ or V- will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
b. All leads welded or soldered to PC board.
c. Derate 12 mW/°C above 75 °C.
d. Derate 10 mW/°C above 75 °C.

Notes

a. Room = 25 °C, Full = as determined by the operating temperature suffix.
b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this datasheet.
c. Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
d. Guaranteed by design, not subject to production test.
e. V_{IN} = input voltage to perform proper function.
f. On-resistance match and flatness are guaranteed only for bipolar supply operation.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

APPLICATIONS

Band-Pass Switched Capacitor Filter

Single-pole double-throw switches are a common element for switched capacitor networks and filters. The fast switching times and low leakage of the DG333A, DG333AL allow for higher clock rates and consequently higher filter operating frequencies. Figure 8 shows two capacitors being switched.

The DG333A, DG333AL is capable of switching four capacitors.

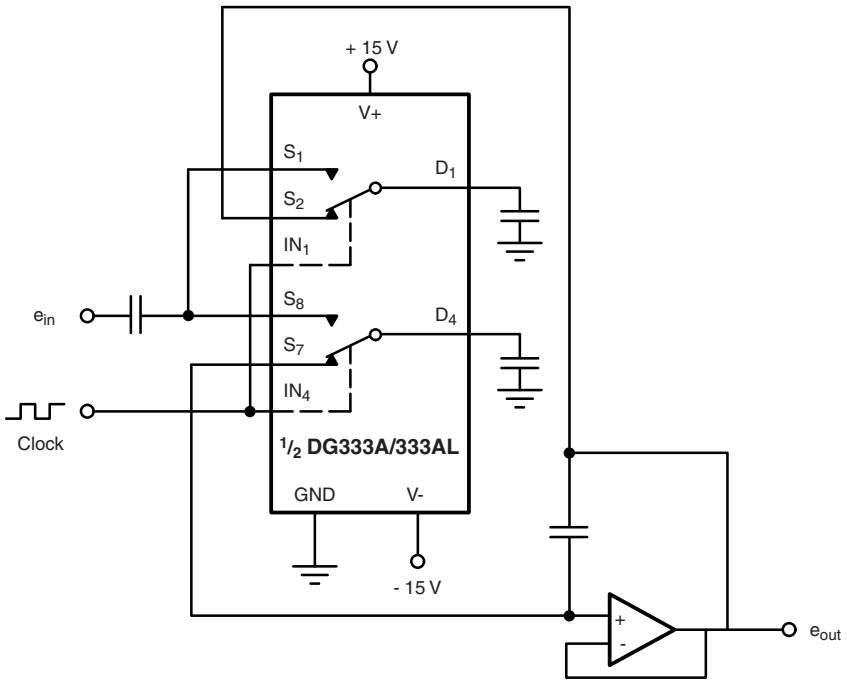

Fig. 8 - Band-Pass Switched Capacitor Filter

Vishay Siliconix maintains worldwide manufacturing capability. Products may be manufactured at one of several qualified locations. Reliability data for Silicon Technology and Package Reliability represent a composite of all qualified locations.
