6. OPTICAL CHARACTERISTICS

6.1 TEST CONDITIONS

Item	Symbol	Value	Unit
Ambient Temperature	Ta	25±2	°C
Ambient Humidity	Ha	50±10	%RH
Supply Voltage	V _{CC} & V _{DD}	3.0	V

6.2 OPTICAL SPECIFICATIONS

Item	symbol	Rating			Unit	Note
		Min.	Typ.	Max.		
Contrast Ratio	CR	5	10	---	---	$\theta_x = \theta_y = 0(1), (2)$
Refresh time	Tr	---	3	---	sec	(2)
Reflectance	R%	---	32	---	%	(3)

Not include Masking Film. Driven and optical measured by PDI waveform and CM-700d.

Note (1) Definition of Viewing Angle (θ_x, θ_y):

(2) 1.5 second is the refresh time at 25°C. The refresh time and contrast ratio are easy to be changed due to different films, display performance requirement, and ambient temperature. The refresh time is times of that at room temperature.

(3) Definition of Reflectance (R%):

The reflectance can be calculated by the following expression.

$$\text{Reflectance}(R\%) = L(\text{White}) / L(\text{Std. White}) * 100\%$$

L(White): Luminance of white

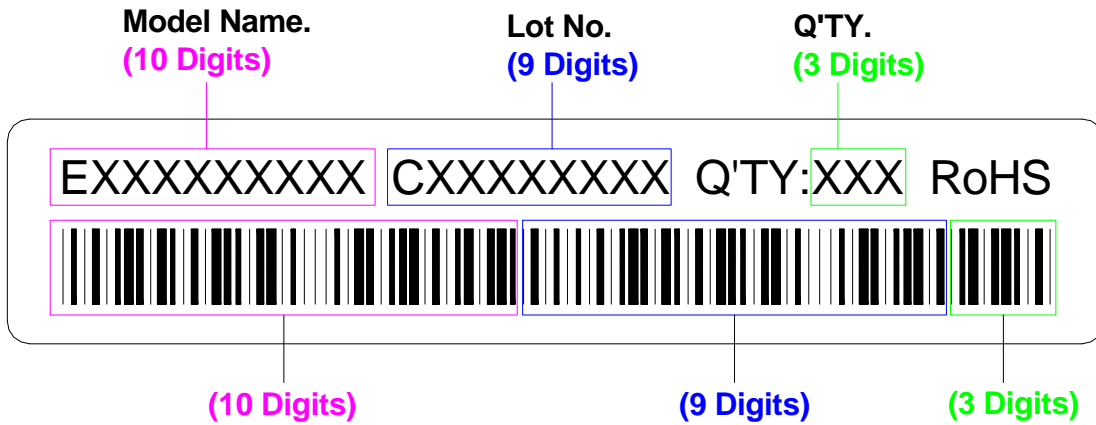

L(Std. White): Luminance of the standard white plate, which is made of BaCO₃

8. PRECAUTIONS

- (1) Do not apply rough force such as bending or twisting to the EPD panel during assembly.
- (2) It is recommended to assemble or install EPD panels in a clean working area. Dust and oil may cause electrical shorts or degrade the PS film.
- (3) Do not apply pressure to the EPD panel in order to prevent damaging it.
- (4) Always follow the correct power-on sequence in turning on the EPD panel. This will help prevent a short circuit "latchup" of the ICs.
- (5) Do not plug in or pull out the I/F connector while the EPD panel is in operation.
- (6) Do not disassemble or reassemble the EPD panel.
- (7) Use a soft dry cloth without chemicals for cleaning. The surface of the PS film is very soft and easily scratched.
- (8) Be mindful of moisture to avoid its penetration into the EPD panel, which may cause damage during operation.
- (9) High temperature, high humidity, sunlight or fluorescent light may degrade the EPD panel's performance. Please do not expose the unprotected EPD panel to high temperature, high humidity, sunlight, or fluorescent for long periods of time. It is highly recommended to store the EPD panel in a dark place without condensation, a temperature range of 20°C to 30°C, and humidity from 40%RH to 60%RH.
- (10) The ink used for marking the Panel ID number is erased easily by solvent. Please avoid using solvent to clean the EPD panel.
