14.2-GBPS Dual Channel, Dual Mode Linear Equalizer

Check for Samples: SN65LVCP1412

FEATURES

- Dual Channel, Uni-Directional, Multi-Rate, Dual-Mode Linear Equalizer with Operation up to 14.2Gbps Serial Data Rate for Backplane and Cable Interconnects
- Linear Equalization Increases Link Margin for Systems Implementing Decision Feedback Equalizers (DFE)
- 18dB Analog Equalization at 7.1GHz with 1dB Step Control for Backplane Mode or Cable Mode
- Output Linear Dynamic Range: 1200mV
- Bandwidth: >20GHz – Typical
- Better than 15dB Return Loss at 7.1GHz
- Supports Out-of-Band (OOB) Signaling
- Low Power: Typically 75mW per Channel at 2.5V VCC
- 24-Terminal QFN (Quad Flatpack, No-Lead) 4mm x 5mm x 0.75mm; 0.5mm Terminal Pitch
- Excellent Impedance Matching to 100Ω Differential PCB Transmission Lines
- GPIO or I^2C Control
- 2.5V and 3.3V±5% Single Power Supply
- 2kV ESD (HBM)
- Flow-Through Pin-Out Provides Ease of Routing
- Small Package Size Saves Board Space

APPLICATIONS

- High Speed Links in Telecommunication and Data communication
- Backplane and Cable Interconnects for 10GbE, 16GFC,10G SONET, SAS, SATA, CPRI, OBSAI, Infiniband, 10GBase-KR, and XFI/SFI

DESCRIPTION

The SN65LVCP1412 is an asynchronous, protocol-agnostic, low latency, two-channel linear equalizer optimized for use up to 14.2Gbps and compensates for losses in backplane or active cable applications. The architecture of SN65LVCP1412 is designed to work with an ASIC or a FPGA with digital equalization employing Decision Feedback Equalizers (DFE). SN65LVCP1412 linear equalizer preserves the shape of the transmitted signal ensuring optimum DFE performance. SN65LVCP1412 provides a low power solution while at the same time extending the effectiveness of DFE.

SN65LVCP1412 is configurable via I^2C or GPIO interface. Using the I^2C interface of the SN65LVCP1412 enables the user to control independently the Equalization, Path Gain, and Output Dynamic Range for each individual channel. In GPIO mode, Equalization, Path Gain, and Output Dynamic Range can be set for all channels using the GPIO Input pins.

SN65LVCP1412 outputs can be disabled independently via I^2C.

The SN65LVCP1412 operates from a single 2.5V or 3.3V power supply.

The package for the SN65LVCP1412 is a 24 pin 4mm x 5mm x 0.75mm QFN (Quad Flatpack, No-lead) lead-free package with 0.5mm pitch, and characterized for operation from –40°C to 85°C.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

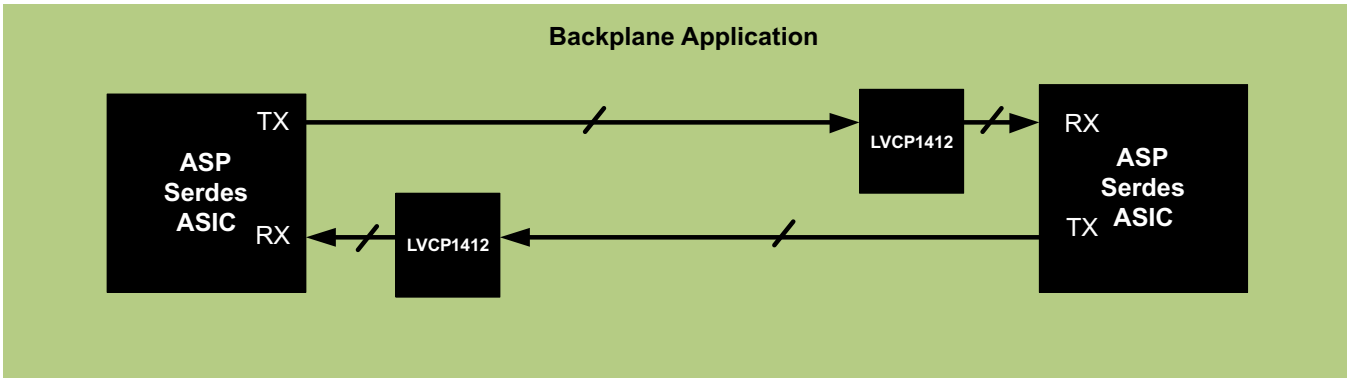

Figure 1. Typical Backplane Application – Trace Mode

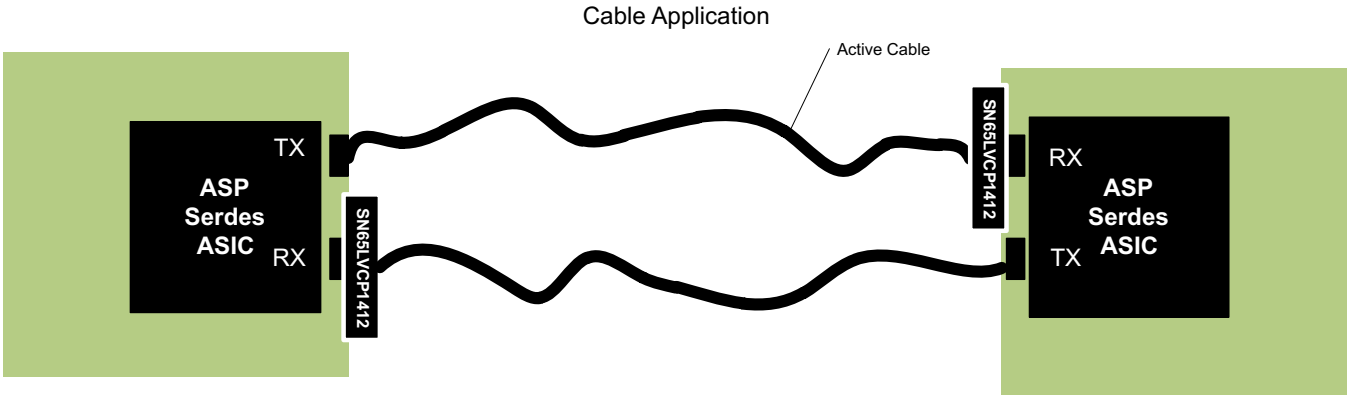

Figure 2. Typical Cable Application – Cable Mode

BLOCK DIAGRAM (GPIO or I²C Mode)

A simplified block diagram of the SN65LVCP1412 is shown in Figure 3 for GPIO or I²C input control mode. This compact, low power, 14.2Gbps dual-channel dual-mode linear analog equalizer consists of two high-speed data paths and an input GPIO pin logic-control block and a two-wire interface with a control-logic block.

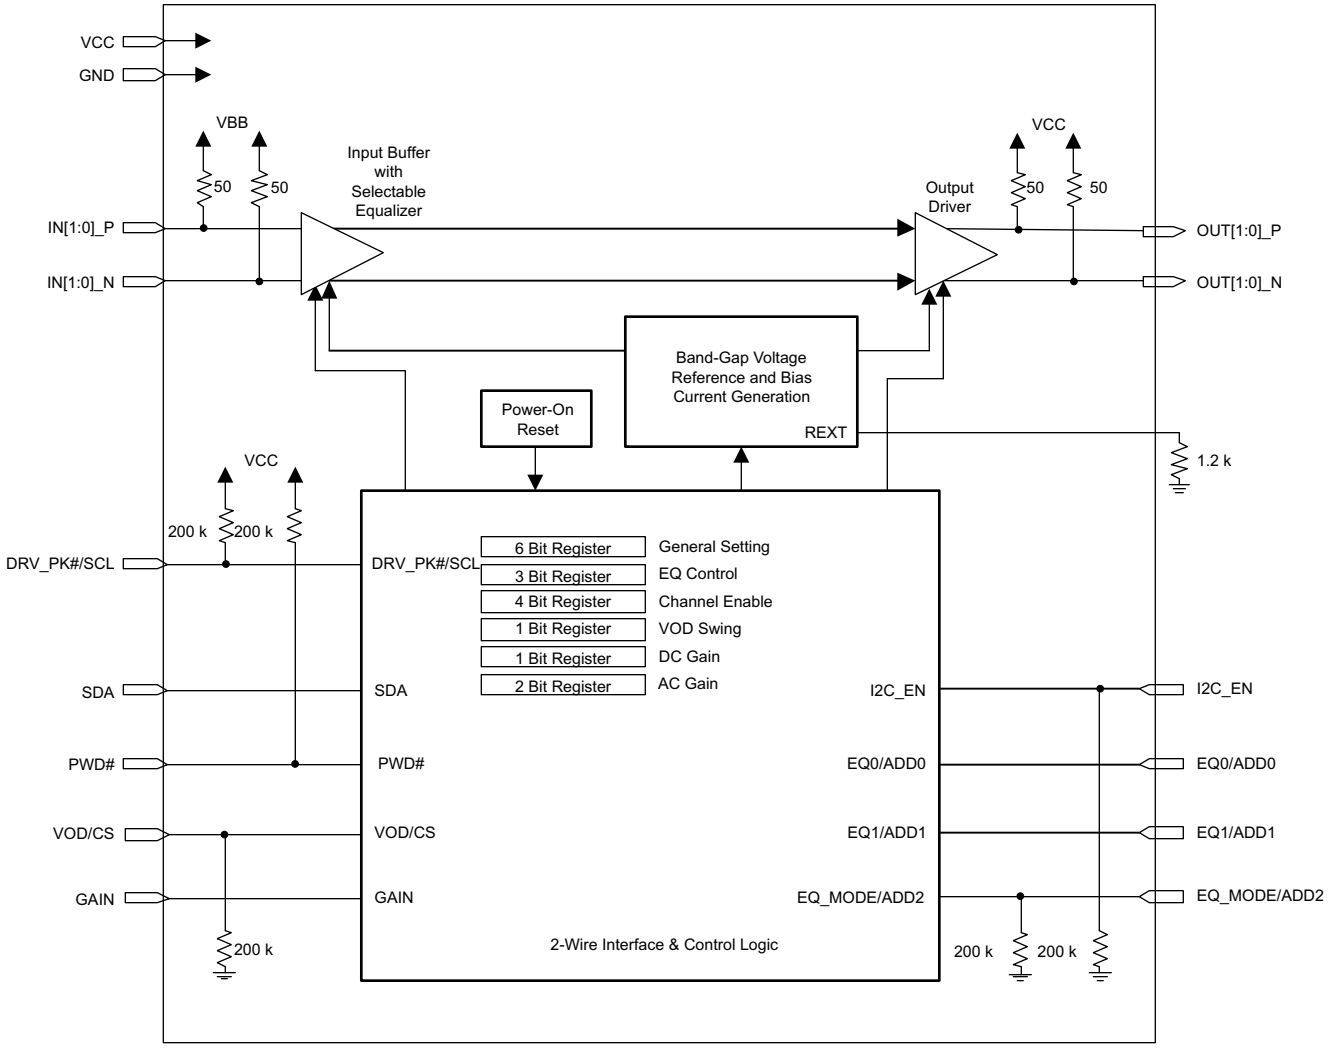

Figure 3. Simplified Block Diagram of the SN65LVCP1412

PACKAGE

The package pin locations and assignments are shown in Figure 4. The SN65LVCP1412 is packaged in a 4mm x 5mm x 0.75mm, 24 pin, 0.5mm pitch lead-free QFN.

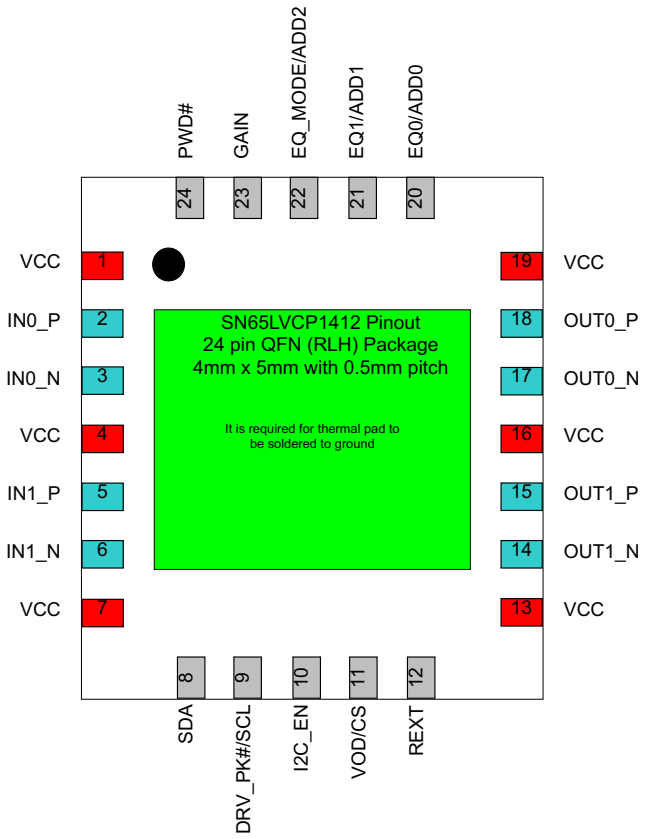

Figure 4. Package Drawing (Top View)

PIN DESCRIPTIONS

PINS		DIRECTION TYPE SUPPLY	DESCRIPTION	
NAME	NO.			
DIFFERENTIAL HIGH-SPEED I/O				
IN0_P IN0_N	2 3	Input, (with 50 Ω termination to input common mode)	Differential input, lane 0	
IN1_P IN1_N	5 6	Input, (with 50 Ω termination to input common mode)	Differential input, lane 1	
OUT0_P OUT0_N	18 17	Output	Differential output, lane 0	
OUT1_P OUT1_N	15 14	Output	Differential output, lane 1	
CONTROL SIGNALS				
SDA	8	Input Output, Open drain	**GPIO mode** No action needed	**I²C mode** I²C data. Connect a 10kΩ pull-up resistor externally
DRV_PK#/SCL	9	Input. (with 200kΩ pull-up)	**GPIO mode** HIGH: disable Driver peaking LOW: enables Driver 6dB AC peaking	**I²C mode** I²C clock. Connect a 10kΩ pull-up resistor externally
I2C_EN	10	Input, (wtih 200kΩ pull-down) 2.5V/3.3V CMOS	Configures the device operation for I²C or GPIO mode: HIGH: enables I²C mode LOW: enables GPIO mode

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted)(1)

		VALUES	UNIT
V_{CC}	Supply voltage range(2)	–0.3 to 4	V
$V_{IN,DIFF}$	Differential Voltage between INx_P and INx_N	±2.5	V
$V_{IN+,\ IN-}$	Voltage at Inx_P and fINx_N	–0.5 V to VCC+0.5	V
V_{IO}	Voltage on Control IO pins	–0.5 V to VCC+0.5	V
I_{IN+} I_{IN-}	Continuous Current at high speed differential data inputs (differential)	–25 to 25	mA
I_{OUT+} I_{OUT-}	Continuous Current at high speed differential data outputs	–25 to 25	mA
ESD	Human Body Model(3) (All Pins)	2.0	kV
	Charged-Device Model(4) (All Pins)	500	V
Moisture Sensitivity level		2	
Shelf Life Conditions In Moisture Barrier Bag		24 Months at <40ºC and <90% Humidity	
Reflow Temperature package soldering, 4 sec		260	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.
(3) Tested in accordance with JEDEC Standard 22, Test Method A114-A.
(4) Tested in accordance with JEDEC Standard 22, Test Method C101.

THERMAL INFORMATION

THERMAL METRIC(1)		SN65LVCP1412 RLH (24 PINS)	UNITS
θ_{JA}	Junction-to-ambient thermal resistance(2)	34.7	°C/W
θ_{JCtop}	Junction-to-case (top) thermal resistance(3)	33.8	
θ_{JB}	Junction-to-board thermal resistance(4)	12.5	
ψ_{JT}	Junction-to-top characterization parameter(5)	0.50	
ψ_{JB}	Junction-to-board characterization parameter(6)	12.5	
θ_{JCbot}	Junction-to-case (bottom) thermal resistance(7)	2.00	

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, SPRA953.
(2) The junction-to-ambient thermal resistance under natural convection is obtained in a simulation on a JEDEC-standard, high-K board, as specified in JESD51-7, in an environment described in JESD51-2a.
(3) The junction-to-case (top) thermal resistance is obtained by simulating a cold plate test on the package top. No specific JEDEC-standard test exists, but a close description can be found in the ANSI SEMI standard G30-88.
(4) The junction-to-board thermal resistance is obtained by simulating in an environment with a ring cold plate fixture to control the PCB temperature, as described in JESD51-8.
(5) The junction-to-top characterization parameter, ψ_{JT}, estimates the junction temperature of a device in a real system and is extracted from the simulation data for obtaining θ_{JA}, using a procedure described in JESD51-2a (sections 6 and 7).
(6) The junction-to-board characterization parameter, ψ_{JB}, estimates the junction temperature of a device in a real system and is extracted from the simulation data for obtaining θ_{JA} , using a procedure described in JESD51-2a (sections 6 and 7).
(7) The junction-to-case (bottom) thermal resistance is obtained by simulating a cold plate test on the exposed (power) pad. No specific JEDEC standard test exists, but a close description can be found in the ANSI SEMI standard G30-88.

RECOMMENDED OPERATING CONDITIONS

$t_{SK(PP)}$	Part-to-part skew(4)	All outputs terminated with 100 Ω			50	ps
r_{OT}	Single ended output resistance	Single ended on-chip termination to VCC. Outputs will be AC coupled.		50		Ω
r_{OM}	Output termination mismatch at 1MHz	$\Delta rom = 2 \times \frac{rp - rn}{rp + rn} \times 100$		5		%
Ch_{iso}	Channel-to-channel isolation	Frequency at 7.1GHz	35	45		dB
OUT_{NOISE}	Output referred noise(5)	10MHz to 7.1GHz. No other noise source present. VOD = LOW		400		µVRMS
		10MHz to 7.1GHz. No other noise source present. VOD = HIGH		500		µVRMS
EQUALIZATION						
EQ_{Gain}	At 7.1GHz input signal	Equalization Gain, EQ = MAX	15	18		dB
Vpre	Output pre-cursor pre-emphasis	Input signal with 3.75 pre-cursor and measure it on the output signal, Refer Figure 9. Vpre = 20log(V3/V2)		3.75		dB
Vpst	Output post-cursor pre-emphasis	Input signal with 12dB post-cursor and measure it on the output signal, Refer Figure 9. Vpst = 20log(V1/V2)		12		dB
DJ1	Residual deterministic jitter at 10.3125 Gbps	Transmit Side application Tx launch Amplitude = 0.6Vpp, EQ=0, ACGain and DCgain = Low and VOD = High, Trace Mode Test Channel -> 0". See Figure 11		0.016		UIp-p
DJ2	Residual deterministic jitter at 10.3125 Gbps	Receive Side Application Tx launch Amplitude = 0.6Vpp, EQ=7, ACGain and VOD = High and DCGain = High, Trace Mode Test Channel -> 12" (9dB loss at 5GHz) See Figure 10		0.11		UIp-p
DJ3	Residual Deterministic Jitter at 14.2 Gbps	Transmit Side Application Tx launch Amplitude = 0.6Vpp, EQ=0, ACGain and DCgain = Low and VOD = High, Trace Mode Test Channel -> 0". See Figure 11		0.041		UIp-p
DJ4	Residual Deterministic Jitter at 14.2 Gbps	Receive Side Application Tx launch Amplitude = 0.6Vpp, EQ=7, ACGain and VOD = High and DCGain = High, Trace Mode Test Channel -> 8" (9dB loss at 7GHz) See Figure 10		0.13		UIp-p

(2) Rise and Fall measurements include board and channel effects of the test environment, refer to Figure 10 and Figure 11
(3) $t_{SK(O)}$ is the magnitude of the time difference between the channels.
(4) $t_{SK(PP)}$ is the magnitude of the difference in propagation delay times between any specified terminals of two devices when both devices operate with the same supply voltages, at the same temperature, and have identical packages and test circuits.
(5) All noise sources added.

TWO-WIRE SERIAL INTERFACE AND CONTROL LOGIC

The SN65LVCP1412 uses a 2-wire serial interface for digital control. The two circuit inputs, SDA and SCL, are driven, respectively, by the serial data and serial clock from a microcontroller, for example. The SDA and SCK pins require external 10kΩ pull-ups to VCC.

The 2-wire interface allows write access to the internal memory map to modify control registers and read access to read out control and status signals. The SN65LVCP1412 is a slave device only which means that it cannot initiate a transmission itself; it always relies on the availability of the SCK signal for the duration of the transmission. The master device provides the clock signal as well as the START and STOP commands. The protocol for a data transmission is as follows:

1. START command
2. 7 bit slave address (0000ADD[2:0]) followed by an eighth bit which is the data direction bit (R/W). A zero indicates a WRITE and a 1 indicates a READ. The ADD[2:0] address bits change with the status of the ADD2, ADD1, and ADD0 device pins, respectively. If the pins are left floating or pulled down, the 7 bit slave address is 0000000.
3. 8 bit register address
4. 8 bit register data word
5. STOP command

Regarding timing, the SN65LVCP1412 is I^2C compatible. The typical timing is shown in Figure 9 and a complete data transfer is shown in Figure 10. Parameters for Figure 9 are defined in Table 3.

Bus Idle: Both SDA and SCL lines remain HIGH

Start Data Transfer: A change in the state of the SDA line, from HIGH to LOW, while the SCL line is HIGH, defines a START condition (S). Each data transfer is initiated with a START condition.

Stop Data Transfer: A change in the state of the SDA line from LOW to HIGH while the SCL line is HIGH defines a STOP condition (P). Each data transfer is terminated with a STOP condition; however, if the master still wishes to communicate on the bus, it can generate a repeated START condition and address another slave without first generating a STOP condition.

Data Transfer: The number of data bytes transferred between a START and a STOP condition is not limited and is determined by the master device. The receiver acknowledges the transfer of data.

Acknowledge: Each receiving device, when addressed, is obliged to generate an acknowledge bit. The transmitter releases the SDA line and a device that acknowledges must pull down the SDA line during the acknowledge clock pulse in such a way that the SDA line is stable LOW during the HIGH period of the acknowledge clock pulse. Setup and hold times must be taken into account. When a slave-receiver doesn't acknowledge the slave address, the data line must be left HIGH by the slave. The master can then generate a STOP condition to abort the transfer. If the slave-receiver does acknowledge the slave address but some time later in the transfer cannot receive any more data bytes, the master must abort the transfer. This is indicated by the slave generating the not acknowledge on the first byte to follow. The slave leaves the data line HIGH and the master generates the STOP condition.

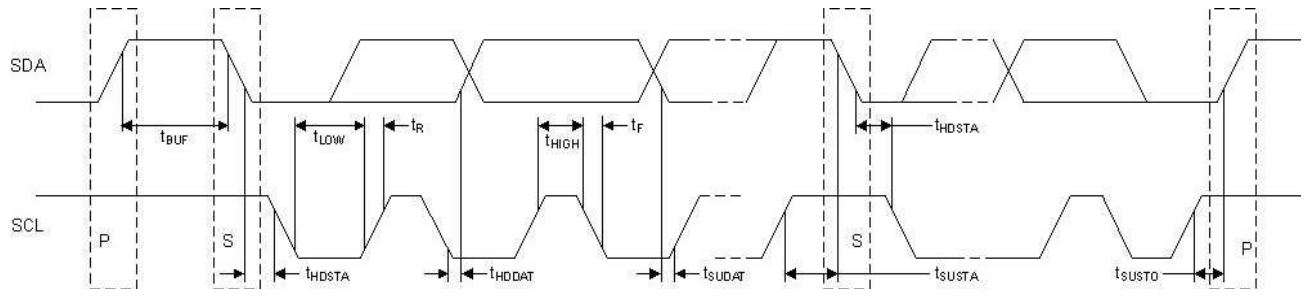

Figure 23. Two-wire Serial Interface Timing Diagram

Table 3. Two-Wire Serial Interface Timing Diagram Definitions

SYMBOL	PARAMETER	MIN	MAX	UNIT
f_{SCL}	SCL clock frequency		400	kHz
t_{BUF}	Bus free time between START and STOP conditions	1.3		µs
t_{HDSTA}	Hold time after repeated START condition. After this period, the first clock pulse is generated	0.6		µs
t_{LOW}	Low period of the SCL clock	1.3		µs
t_{HIGH}	High period of the SCL clock	0.6		µs
t_{SUSTA}	Setup time for a repeated START condition	0.6		µs
t_{HDDAT}	Data HOLD time	0		µs
t_{SUDAT}	Data setup time	100		ns
t_R	Rise time of both SDA and SCL signals		300	ns
t_F	Fall time of both SDA and SCL signals		300	ns
t_{SUSTO}	Setup time for STOP condition	0.6		µs

Table 5. SN65LVCP1412 Register Description

REGISTER	BIT	SYMBOL	FUNCTION	DEFAULT
0x00	7	RSVD	Fot TI use only	00000000
	6	PWRDOWN	Power down the device: 0 = Normal operation 1 = Powerdown	
	5	SYNC_01	All settings from channel 1 will be used for channel 0 and 1: 0 = channel 0 tracking channel 1 settings 1 = no tracking tracking	
	4	RSVD	For TI use only	
	3	SYNC_ALL	All settings from channel 1 will be used on all channels: 0 = all channels tracking channel 1 1 = no channel tracking Overwrites SYNC_01	
	2	EQ_MD	Set EQ Mode: 0 = Cable Mode 1 = Trace Mode	
	1			
	0	RSVD	For TI use only

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN65LVCP1412RLHR	ACTIVE	WQFN	RLH	24	3000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	LVCP 1412	Samples
SN65LVCP1412RLHT	ACTIVE	WQFN	RLH	24	250	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	LVCP 1412	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

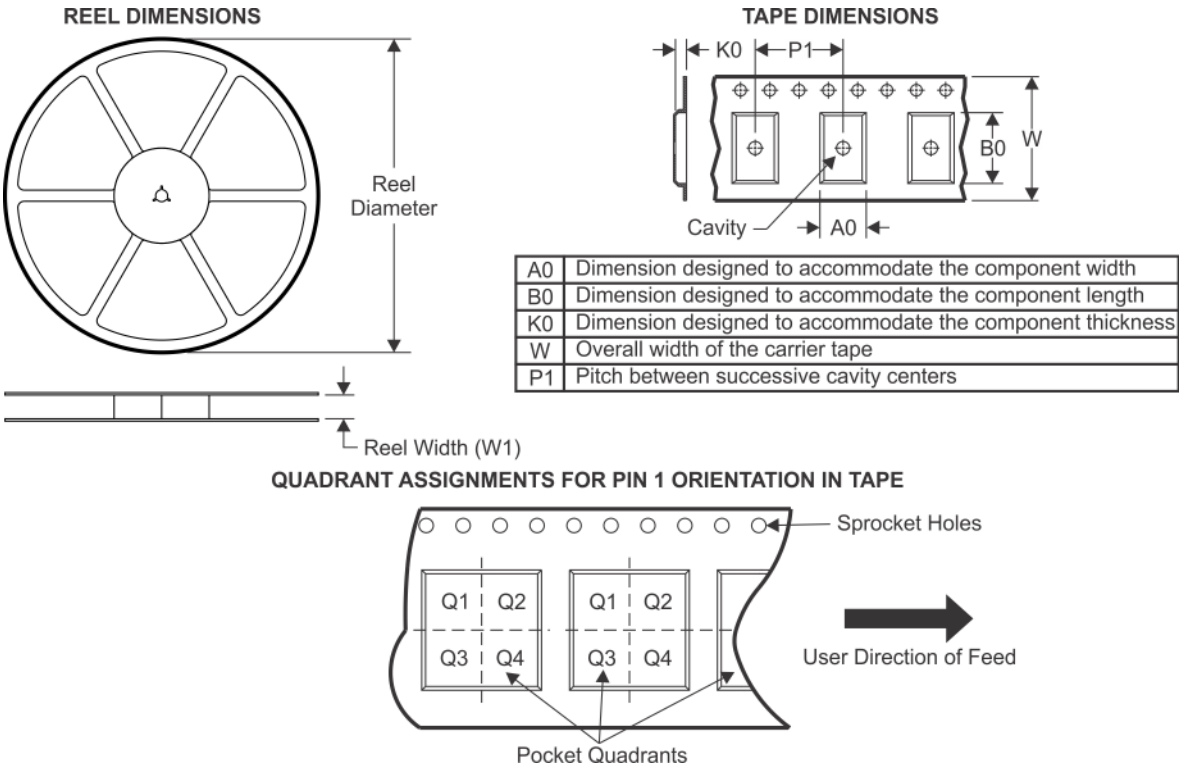
(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

TAPE AND REEL INFORMATION

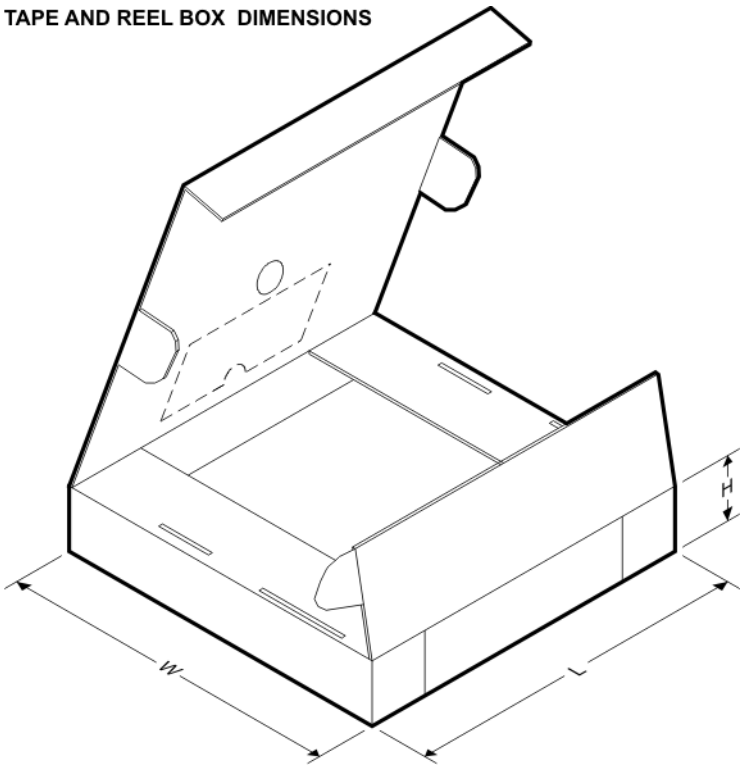


A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
SN65LVCP1412RLHR	WQFN	RLH	24	3000	330.0	12.4	4.3	5.3	1.3	8.0	12.0	Q1
SN65LVCP1412RLHT	WQFN	RLH	24	250	330.0	12.4	4.3	5.3	1.3	8.0	12.0	Q1

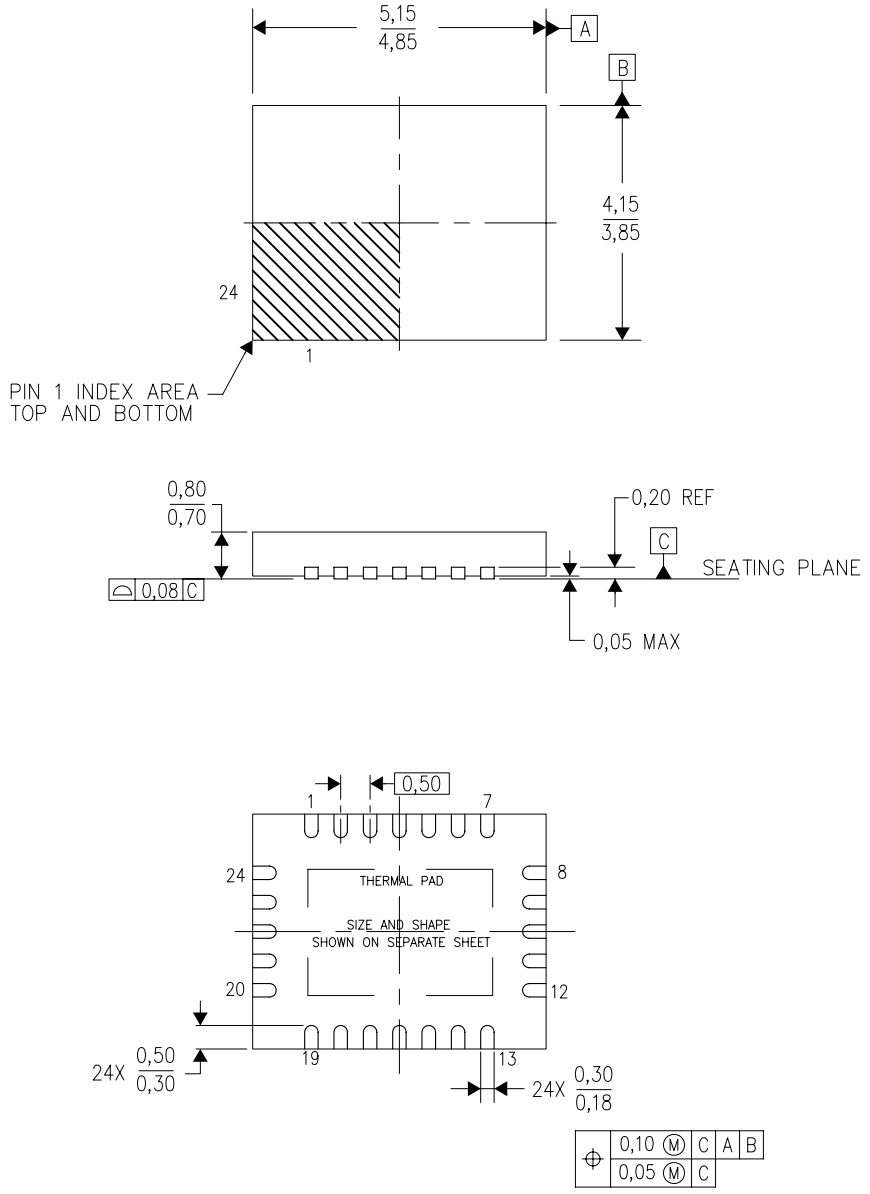
TAPE AND REEL BOX DIMENSIONS



*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
SN65LVCP1412RLHR	WQFN	RLH	24	3000	367.0	367.0	38.0
SN65LVCP1412RLHT	WQFN	RLH	24	250	367.0	367.0	38.0

RLH (R–PWQFN–N24) PLASTIC QUAD FLATPACK NO–LEAD



NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. QFN (Quad Flatpack No–Lead) Package configuration.
D. The package thermal pad must be soldered to the board for thermal and mechanical performance.
E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
F. Falls within JEDEC MO–220.
