### 2 Product Description

The BGS16GA14 is a Single Pole Eight Throw (SP8T) Diversity Switch Module optimized for wireless applications up to 3.8 GHz. As part of a pin- and functional-compatible SP3T-SP8T product family it has been designed to meet the requirements of chipset reference designs. The module comes in a miniature ATSLP package and comprises of a high power CMOS SP8T switch with integrated GPIO interface. This RF switch is a perfect solution for multimode handsets based on LTE and WCDMA. The switch device configuration is shown in Fig. 1.

The switch is controlled via a GPIO interface. It features DC-free RF ports and unlike GaAs technology, external DC blocking capacitors at the RF ports are only required if DC voltage is applied externally.
