

SPC-31-31-F

Ruland SPC-31-31-F, 1-15/16" x 1-15/16" Rigid Coupling, Black Oxide Steel, Two-Piece Clamp Style With Keyway, 3 3/8" OD, 4 7/8" Length

Description

Ruland SPC-31-31-F is a two-piece rigid coupling with 1.9375" x 1.9375" bores, 3 3/8" OD, 4 7/8" length, and 1/2" x 1/2" keyways. It has precision honed bores to ensure they are collinear and do not introduce misalignment or vibration into the system making it suitable for high precision servo applications as well as shaft to shaft connections. SPC-31-31-F has opposing hardware for a balanced design. Proprietary Nypatch® anti-vibration coating on hardware allows for even seating of the screw, repeated screw installations, prevents galling, and maintains high holding power. It eliminates the need to treat screws upon receipt greatly reducing installation time. Forged screws test beyond ANSI standards to ensure maximum holding power. Tightly controlled bore tolerance of +.002"/+.0005" is maintained. SPC-31-31-F is made from 1215 lead-free steel with a proprietary black oxide finish that produces a fine glossy finish while increasing holding power and resisting corrosion. It is machined from solid bar stock that is sourced exclusively from North American mills and is RoHS3 and REACH compliant. SPC-31-31-F is manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

Product Specifications

Installation Instructions

1. Align the SPC-31-31-F two-piece rigid coupling on the two shafts to be connected. There should be no misalignment.
2. Tighten the Nypatch® screws in two stages, starting with the inside screws. Using a 5/16 in torque wrench, tighten the inside screws to 285 lb-in which is half the recommended seating torque. Repeat

- the process for the outside screws, tightening to half the recommended seating torque.
3. Be sure to maintain the gap of 0.094 in between the two halves during installation.
 4. Tighten the screws to the full recommended seating torque of 570 lb-in following the same pattern, starting with the inside screws first.
 5. For optimum results do not exceed the shaft penetration length of 2.437 in.
