

# MICRF300

100MHz to 1000MHz, 1.8 to 3.6V,  
Low-Noise Amplifier with Shutdown

## General Description

The MICRF300 is a low-noise amplifier (LNA) with low-power shutdown mode, which operates over the 100MHz to 1000MHz frequency band. The device is targeted for low-power, low-data rate applications at 315/433MHz, achieving a low 1.2dB noise figure with 18dB of gain, helping to improve receiver noise figure and sensitivity. The device also performs well at 868/915MHz, achieving 13dB of gain and a noise figure of 1.7dB. The device requires a simple input matching network and output matching network to optimize performance for the desired frequency band.

The MICRF300 operates over the 1.8V to 3.6V voltage range. Consuming a low 2.5mA of supply current during operation and a typical 50nA of shutdown current, the MICRF300 is an ideal solution for battery powered equipment. The device is available in 6-pin SC70 package and is rated to operate over the -40°C to +125°C temperature range.

## Features

- 1.8V to 3.6V supply voltage range
- 2.5mA operating supply current
- 1µA (Max) shutdown current over temperature
- 18.3dB gain at 315MHz/433.92MHz
- 1.15dB noise figure at 315MHz/433.92MHz
- -25dBm input P<sub>1dB</sub> compression point at 433.92MHz
- -40°C to +125°C operating temperature range
- Small 6-pin SC70 package

## Applications

- Security systems
- Remote keyless entry (RKE)
- Tire pressure monitoring (TPMS)
- Automated meter reading (AMR)
- Garage door openers (GDO)
- Remote weatherstations

## Typical Application Circuit

## Typical Performance and Matching Component Values

f <sub>RF</sub> (MHz)	I <sub>cc</sub> (mA)	Gain (dB)	NF (dB)	IP1dB (dBm)	IIP3 (dBm)	L1 (nH)	C1 (pF)	L2 (nH)	C2 (pF)
315	2.5	18.5	1.15	-26.5	-15	33	1000	47	5.6
433.92	2.5	18.3	1.15	-25	-13	22	1000	33	3.9
900	2.5	13.6	1.7	-21	-10	2.7	270	10	1.8

## Ordering Information

Part Number	Temp. Range	Package	Top Mark
MICRF300YC6	-40°C to +125°C	SC70-6	<u>XE1</u>

### Notes:

1. Under bar symbol () may not be to scale.

## Pin Configuration

SC70-6 (C6)

## Pin Description

Pin Number	Pin Name	Pin Function
1	EN	Enable Logic Input. Logic high enables the part. Logic low disables the part.
2, 4	GND	Ground. Connect to PCB ground plane.
3	RFIN	RF Input. DC blocking and matching network is required.
5	RFOUT	RF Output. Connect a pull-up inductor to the supply and a matching network to the load.
6	V <sub>CC</sub>	Supply Voltage. Connect a 0.1μF bypass capacitor as close to the pin as possible.

**Absolute Maximum Ratings<sup>(1)</sup>**

Supply Voltage ( $V_{CC}$ )	-0.3V to +3.9V
EN Voltage ( $V_{EN}$ )	-0.3V to $V_{CC} + 0.3V$
Maximum Junction Temperature ( $T_J$ )	+150°C
Storage Temperature ( $T_S$ )	-65°C to +150°C
Lead Temperature (soldering, 10sec.)	+260°C
Maximum Input Power	+10dBm (50Ω source)
ESD Rating <sup>(3)</sup>	
HBM	1.5kV
MM	100V

**Operating Ratings<sup>(2)</sup>**

Supply Voltage ( $V_{CC}$ )	+1.8V to +3.6V
EN Voltage ( $V_{EN}$ )	0V to $V_{CC}$
Ambient Temperature ( $T_A$ )	-40°C to +125°C
RFIN DC voltage	AC coupled
Frequency Range	100MHz to 1000MHz
Thermal Resistance ( $\theta_{JA}$ )	260°C/W

**ELECTRICAL CHARACTERISTICS TABLE<sup>(4)</sup>**

$V_{CC} = +2.7V$ ,  $T_A = +25^\circ C$ , bold values indicate  $-40^\circ C \leq T_A \leq +125^\circ C$ , unless noted.

Parameter	Condition	Min	Typ	Max	Units
Shutdown Current ( $I_{SHDN}$ )	$V_{EN} = 0V$ , $T_A = +25^\circ C$		0.05	0.5	$\mu A$

	$f_{RF} = 433.92MHz$		-13		
	$f_{RF} = 900MHz$		-10		
Input 1dB compression ( $P_{1dB}$ )	$f_{RF} = 315MHz$		-27		dBm
	$f_{RF} = 433.92MHz$		-25		
	$f_{RF} = 900MHz$		-21		
Enable Time	$f_{RF} = 315MHz$ ; 433.92MHz		10		$\mu s$
Disable Time	$f_{RF} = 315MHz$ ; 433.92MHz		10		$\mu s$

**Notes:**

- Exceeding the absolute maximum rating may damage the device.
- The device is not guaranteed to function outside its operating rating.
- Devices are ESD sensitive. Handling precautions recommended. Human body model, 1.5kΩ in series with 100pF.
- Specification for packaged product only.
- IIP3 is measured with two tones located at 433MHz and 433.92MHz or 899MHz and 900MHz with -40dBm/tone.

## Typical Characteristics (Continued)

## Functional Description

The MICRF300 is a low-noise amplifier (LNA) which operates over the 100 to 1000MHz frequency range. The device operates from a 1.8V to 3.6V voltage supply, where it consumes 2.5mA of supply current during operation, and 1 $\mu$ A (max) of current in shutdown. A simple LC input matching network is required to optimize the device for best noise figure. A simple LC network is required to bias the output stage and match the output to the following stage. Recommended matching networks have been provided for 315MHz, 433.92MHz and 900MHz. See *Evaluation Board and Bill of Materials* for recommended component values. See Figure 1 for Block Diagram of the MICRF300.

## Input Matching

The RF input pin, RFIN (Pin 3) is directly connected to the base of the RF input device. In normal operation, the DC voltage of this pin is one diode above GND. The MICRF300 requires an input matching network for optimal noise figure, gain and linearity. A series inductor and a DC-blocking capacitor are required to implement this network. A high-Q, wire-wound type inductor is recommended for lowest noise figure at 315MHz and 433.92MHz. A standard multi-layer ceramic inductor can be used, but the noise figure degrades by 0.2 dB. At 900MHz, a standard multi-layer ceramic inductor may be used as the inductance value is very low, and the Q does not make a measurable difference. See recommended component values in the *Typical Performance and Matching Component Values* section of the data sheet.

## Functional Diagram

Figure 1: Block Diagram

## Output Bias and Matching

The output stage has an internal pull-up resistor of 250 $\Omega$ . To resonate out any parasitic capacitance and to increase output swing capability, a multi-layer ceramic inductor should be connected from the RF output, RFOUT (Pin 5) pin to  $V_{CC}$ . See recommended component values in the *Typical Performance and Matching Component Values* table of the data sheet.

## Enable

The MICRF300 features a logic-level enable, EN (Pin 1). A logic-level low disables the device. A logic-level High enables the device. The value of the input DC-blocking capacitor will affect the enable and disable time of the device.

## Power Supply Bypassing

Minimum supply bypassing is needed on PCB board to filter out AC fluctuations in supply voltage. It is achieved by placing a 0.1 $\mu$ F capacitor as close as possible between the  $V_{CC}$  (Pin 6) and GND (Pins 2 and 4). Refer to the MICRF300 Evaluation Board for recommend layout.
