## **1.0 Purpose**

Implement ESD electrostatic control test in accordance with the ANSI / ESD-S20.20 patent policy on a table with LisStat™ laminated surface. Applying the following points:

- ESD S 4.1: Protection of articles susceptible to electrostatic discharges - work surfaces - characterization of resistance.
- ESD STM 4.2: Protection of articles susceptible to electrostatic discharges - surfaces and work - load dissipation characteristics.

## 2.0 Scope and Focus

The tests were applied to the surfaces of the work tables with LisStat™ laminate with respect to the ESD S 4.1 and ESD STM 4.2.

*Table 1.0 TECHNICAL REQUIREMENTS OF THE ESD CONTROL PROGRAM*

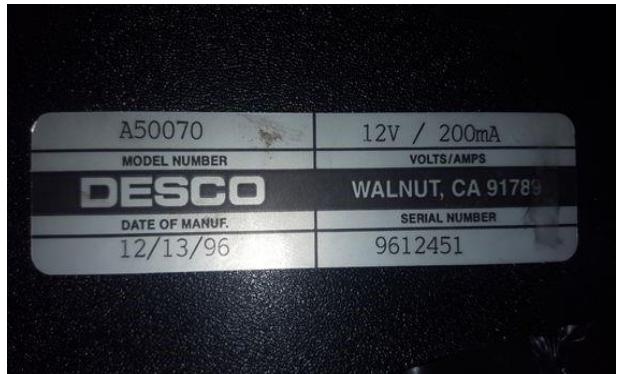

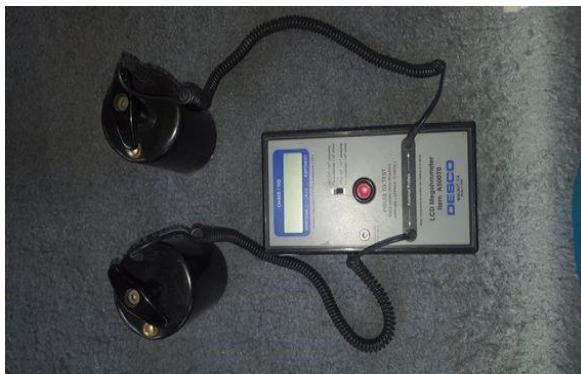

Technical Request	Implementation Method or Process	Test Method, Standard or Warning	Recommended Range
Protected surface	Work surface	ESD S 4.1 ESD STM 4.2	<1 X10 <sup>9</sup> ohm <200 volts

**Note:** The ESD STM4.2 test was applied at 100 volts.

**Note:** ANSI S20.20 does not specify any lower limit, however, ANSI / ESD S4.1 recommends in the manufacturing environment a resistance range greater than or equal to  $1 \times 10^6$  to less than  $1 \times 10^9$  ohms.

### 3.0 USED TOOL

- DESCO LCD MEGOHMMETER A50070

## 4.0 Process

The tool (DESCO LCD MEGOHMMETER A50070) was placed on different points on a laminated surface LisStat™ obtaining the following results with unit of measurement in ohms.
