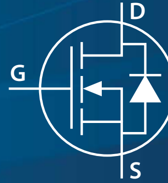
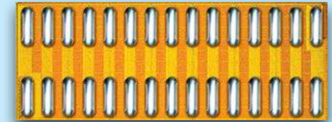
EPC2022 – Enhancement Mode Power Transistor

V_{DS} , 100 V
$R_{DS(on)}$, 3.2 mΩ
I_D , 90 A



Gallium Nitride's exceptionally high electron mobility and low temperature coefficient allows very low $R_{DS(on)}$, while its lateral device structure and majority carrier diode provide exceptionally low Q_G and zero Q_{RR}. The end result is a device that can handle tasks where very high switching frequency, and low on-time are beneficial as well as those where on-state losses dominate.



Die Size: 6.05 x 2.3 mm

EPC2022 eGaN® FETs are supplied only in passivated die form with solder bumps.
