

EVL28167-A-Q-00A

3A, 22V, Synchronous Buck-Boost Converter with I²C Interface for Power Delivery Evaluation Board

DESCRIPTION

The EVL28167-A-Q-00A is an evaluation board for the MP28167-A, a high-efficiency, synchronous buck-boost converter with four integrated power switches and an I²C interface. The device can regulate output voltages across a wide input voltage supply range (2.8V to 22V).

The MP28167-A's integrated output voltage scaling and configurable output current limit functions are ideal for USB power delivery (PD) applications.

In buck mode, the MP28167-A uses constant-on-time (COT) control. In boost mode, it uses constant-off-time control. This provides fast load transient response and a smooth buck-boost mode transient. The MP28167-A features automatic pulse-frequency modulation (PFM) and pulse-width modulation (PWM) modes, forced PWM mode, as well as configurable constant current (CC) limiting and soft start (SS). These features provide flexible design options for different applications.

The MP28167-A's fault protections include over-current protection (OCP), over-voltage protection (OVP), under-voltage protection (UVP), short-circuit protection (SCP), and thermal shutdown (TSD).

The MP28167-A requires a minimal number of readily available, standard external components, and is available in a QFN-16 (3mmx3mm) package.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Operating input voltage	V _{IN}	12	V
Switching frequency	f _{sw}	500	kHz
Output voltage	V _{OUT}	5	V
Output current	I _{OUT}	3	A

FEATURES

- Configurable Output Voltage via the FB Pin
- Wide 2.8V to 22V Operating Input Range
- 0.08V to 1.637V Reference Voltage (V_{REF}) Range with 0.8mV Resolution via the I²C (Default V_{REF} is 1V)
- 3A Output Current or 4A Input Current
- Four Internal, Low R_{DS(ON)} Power MOSFETs
- Accurate Constant Current (CC) Output Current Limit with Internal Sensing
- 500kHz/750kHz Configurable Switching Frequency
- Line Drop Compensation
- Over-Voltage Protection (OVP) with Hiccup Mode
- Short-Circuit Protection (SCP) with Hiccup Mode
- Over-Temperature Protection
- I²C Interface and One-Time Programmable (OTP) Non-Volatile Memory:
 - Pulse-Frequency Modulation (PFM) Pulse-Width Modulation (PWM) Modes, Line Drop Compensation, Soft Start, OCP, OVP, etc.
- Configurable EN Shutdown Discharge
- Available in a QFN-16 (3mmx3mm) Package

 Optimized Performance with MPS Inductor MPL-AL6050 Series

APPLICATIONS

- USB Power Delivery (PD) for Sourcing Ports
- Buck-Boost Bus Voltage (V_{BUS}) Supplies

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS", the MPS logo, and "Simple, Easy Solutions" are trademarks of Monolithic Power Systems, Inc. or its subsidiaries.

EVL28167-A-Q-00A EVALUATION BOARD

LxW (6.35cmx6.35cm)

Efficiency vs. Output Current

$V_{IN} = 12V$, $V_{OUT} = 5V$, $f_{sw} = 500kHz$,
 $L = 4.7\mu H$, $R_{DC} = 16.5m\Omega$

Board Number	MPS IC Number	MPS Inductor
EVL28167-A-Q-00A	MP28167GQ-A	MPL-AL6050-4R7

QUICK START GUIDE

1. Connect the load terminals to:
 - a. Positive (+): VOUT
 - b. Negative (-): GND
2. Preset the power supply output to 12V.
3. Turn off the power supply.
4. Connect the power supply terminals to:
 - a. Positive (+): VIN
 - b. Negative (-): GND
5. After making the connections, turn on the power supply. The board automatically should start up with its default settings. The related parameters can be changed by the I²C. ⁽¹⁾

Note:

- 1) Refer to the MP28167-A datasheet for how to change the parameters via the I²C.

EVALUATION BOARD SCHEMATIC
