

IM73A135V01

IP57 dust and water resistant analog XENSIV™ MEMS microphone

Description

The IM73A135V01 is designed for applications which require a microphone with high SNR (low self-noise), low distortion (high AOP), which is also IP57 robust to dust and water.

Best-in-class Signal to Noise Ratio (SNR) of 73dB(A) enables far field and low volume audio pick-up. The flat frequency response (20Hz low-frequency roll-off) and tight manufacturing tolerance improve the performance of multi-microphone array applications.

The high performance analog microphone ASIC contains an extremely low noise preamplifier and a high performance differential output amplifier. Different power modes can be selected in order to suit specific current consumption requirements.

Each IM73A135V01 microphone is calibrated with an advanced Infineon calibration algorithm, resulting in small sensitivity tolerances (± 1 dB).

Features

- Component level IP57 water and dust resistant
- Signal to noise ratio of 73dB(A) SNR
- Acoustic overload point at 135dB SPL
- Flat frequency response with low frequency roll off at 20Hz
- Power optimized modes determined by V_{DD} level
- Package dimensions: 4mm x 3mm x 1.2mm
- Differential output
- Omnidirectional pickup pattern

Typical applications

- Active Noise Cancellation (ANC) headphones and wireless earbuds
- Devices with Voice User Interface (VUI)
 - Smart speakers
 - Home automation
 - IoT devices
- High quality audio capturing
 - Conference systems
 - Cameras and camcorders
- Industrial or home monitoring with audio pattern detection

Product validation

Technology qualified for industrial applications.

Ready for validation in industrial applications according to the relevant tests of IEC 60747 and 60749 or alternatively JEDEC47/20/22.

Environmental robustness

Infineon’s latest Sealed Dual Membrane MEMS technology delivers high ingress protection (IP57) at a microphone level. The sealed MEMS design prevents water or dust from entering between membrane and backplate, preventing mechanical blockage or electric leakage issues commonly observed in MEMS microphones. Microphones built with the sealed dual membrane technology can be used to create IP68 devices, requiring only minimal mesh protection.

Table 2 Environmental robustness

Test Standard	Test Condition
IP5x dust resistance ¹⁾	Arizona dust A4 coarse, vertical orientation , sound hole upwards, 10 cycles (15 minutes sedimentation, 6 sec blowing)
IPx7 water immersion ²⁾	Temporary immersion in 1 meter of water for 30 minutes. Microphone tested 2 hours after removal

¹ The number "5" stands for the dust ingress rating or the capacity to withstand the effects of fine, abrasive dust particles.

² The number "7" identifies the level of liquid protection.

Polarity			Increasing Vout				Increasing SPL

Acoustic characteristics

2.1 Free field frequency response

Figure 10 IM73A135V01 free field frequency response

Table 4 IM73A135V01 free field frequency response, normalised to 1kHz sensitivity value.

Frequency (Hz)	Upper Limit (dB)	Lower Limit (dB)
20	-1.5	-4.5
50	+0.5	-1.5
800	+1	-1
1000	0	0
1200	+1	-1
6000	+2	-1
8000	+4	-1
15000	+9	0

Electrical characteristics and parameters

3 Electrical characteristics and parameters

3.1 Absolute maximum ratings

Stresses at or above the listed maximum ratings may affect device reliability or cause permanent device damage. Functional device operation at these conditions is not guaranteed.

Table 5 Absolute maximum ratings

Parameter	Symbol	Values		Unit	Note / Test Condition
		Min.	Max.		
Supply voltage	V_{DDmax}		3.0	V	
Storage temperature	T_S	-40	100	°C	
Operating temperature	T_A	-40	85	°C	

3.2 Electrical parameters

Table 6 IM73A135V01 electrical parameters

Parameter		Symbol	Values			Unit	Note / Test Condition
			Min.	Typ.	Max.		
Supply voltage	Normal mode	VDD	2.3	2.75	3.0	V	A 100nF bypass capacitor(C_{VDD}) should be placed close to the microphone V_{DD} pin to ensure best SNR performance
	Low power mode		1.52	1.6	1.8		
V_{DD} ramp-up time					5	ms	V_{DD} reaches its final value within $\pm 10\%$ tolerance
Output load	C_{load}	C_a, C_b			100	pF	
		C_d			100		
	R_{load}	R_p, R_n		25		k Ω	
Input VCM	Normal mode	V_{cm}	1.17	1.3	1.43	V	Input VCM is the voltage at the input pins of the audio front end if not driven
	Low power mode		0.765	0.85	0.935		

Electrical characteristics and parameters

Figure 11 Output load configuration

Electrical characteristics and parameters

3.3 Electrical characteristics

Test conditions (unless otherwise specified in the table): $V_{DD} = 2.75V$, $T_A = 25^\circ C$, 55% R.H.

Table 7 IM73A135V01 electrical characteristics

Parameter		Symbol	Values			Unit	Note / Test Condition
			Min.	Typ.	Max.		
Current consumption	Normal mode	I_{DDNP}		170	230	μA	Input ≤ 94 dB SPL
	Low power mode	$I_{DDL P}$		70	80		
Start-up time		$t_{startup}$		10	30	ms	Start-up time in all operating modes after $V_{DD_{min}}$ is applied
Mode switching time		$t_{ModeChange}$		10		ms	Time of undefined output after mode change detected
Brown out voltage		$V_{BrownOut}$		1.2		V	Brown out is triggered for voltage below $V_{BrownOut}$
Vout DC-voltage	Normal mode	$V_{OUT_DC_NP}$		1.35		V	
	Low power mode	$V_{OUT_DC_LP}$		0.9			
Power supply rejection ratio in band (differential)	Normal mode	$PSRR_{InBand_NP}$		80		dB	$V_{DD}=2.75V + 100mV_{pp}$ sinewave (PSR=1/Apower; Apower = Transfer function $V_{DD} \rightarrow$ Differential Output of ASIC)
	Low power mode	$PSRR_{InBand_LP}$		80			$V_{DD}=1.6V + 100mV_{pp}$ sinewave (PSR=1/Apower; Apower = Transfer function $V_{DD} \rightarrow$ Differential Output of ASIC)
Power supply rejection ratio common mode	Normal mode	$PSRR_{CM_NP}$		65		dB	$V_{DD}= 2.75 V + 100mV_{pp}$ sinewave
	Low power mode	$PSRR_{CM_LP}$		60			$V_{DD}= 1.6 V + 100mV_{pp}$ sinewave
Output impedance	Normal mode	Z_{out_NP}			250	Ω	
	Low power mode	Z_{out_LP}			500	Ω	

Package information

4 Package information

2	V _{DD}	Power supply
3	Output -	Differential Output -
4	GND	Ground
5	GND	Ground

Footprint and stencil recommendation

5 Footprint and stencil recommendation

The acoustic port hole diameter in the PCB should be larger than the acoustic port hole diameter of the MEMS Microphone to ensure optimal performance. A PCB sound port size of radius 0.4 mm (diameter 0.8mm) is recommended.

The board pad and stencil aperture recommendations shown in [Figure 13](#) are based on Solder Mask Defined (SMD) pads. The specific design rules of the board manufacturer should be considered for individual design optimizations or adaptations.

Figure 13 IM73A135V01 footprint and stencil recommendation

Packing information

6 Packing information

For shipping and assembly the Infineon microphones are packed in product specific tape-and-reel carriers. A detailed drawing of the carrier can be seen in [Figure 14](#).

Figure 14 IM73A135V01 tape and reel packing information

Reflow soldering and board assembly

7 Reflow soldering and board assembly

Infineon MEMS microphones are qualified in accordance with the IPC/JEDEC J-STD-020D-01. The moisture sensitivity level of MEMS microphones is rated as MSL1. For PCB assembly of the MEMS microphone the widely used reflow soldering using a forced convection oven is recommended.

The soldering profile should be in accordance with the recommendations of the solder paste manufacturer to reach an optimal solder joint quality. The reflow profile shown in **Figure 15** is recommended for board manufacturing with Infineon MEMS microphones.

Figure 15 Recommended reflow profile

Table 9 Reflow profile limits

Profile feature	Pb-Free assembly	Sn-Pb Eutectic assembly
Temperature Min (T_{smin})	150 °C	100 °C
Temperature Max (T_{smax})	200 °C	150 °C
Time (T_{smin} to T_{smax}) (t_s)	60-120 seconds	60-120 seconds
Ramp-up rate (T_L to T_p)	3 °C/second max.	3 °C/second max.
Liquidous temperature (T_L)	217 °C	183 °C
Time (t_L) maintained above T_L	60-150 seconds	60-150 seconds
Peak Temperature (T_p)	260°C +0°C/-5°C	235°C +0°C/-5°C
Time within 5°C of actual peak temperature (t_p) ³⁾	20-40 seconds	10-30 seconds
Ramp-down rate	6 °C/second max.	6 °C/second max.
Time 25°C to peak temperature	8 minutes max.	6 minutes max.

Note: For further information please consult the 'General recommendation for assembly of Infineon packages' document which is available on the Infineon Technologies [web page](#)

³ Tolerance for peak profile temperature (T_p) is defined as a supplier minimum and a user maximum

Reflow soldering and board assembly

The MEMS microphones can be handled using industry standard pick and place equipment. Care should be taken to avoid damage to the microphone structure as follows:

- Do not pick the microphone with vacuum tools which make contact with the microphone acoustic port hole.
- The microphone acoustic port hole should not be exposed to vacuum, this can destroy or damage the MEMS.
- Do not blow air into the microphone acoustic port hole. If an air blow cleaning process is used, the port hole must be sealed to prevent particle contamination.
- It is recommended to perform the PCB assembly in a clean room environment in order to avoid microphone contamination.
- Air blow and ultrasonic cleaning procedures shall not be applied to MEMS Microphones. A no-clean paste is recommended for the assembly to avoid subsequent cleaning steps. The microphone MEMS can be severely damaged by cleaning substances.
- To prevent the blocking or partial blocking of the sound port during PCB assembly, it is recommended to cover the sound port with protective tape during PCB sawing or system assembly.
- Do not use excessive force to place the microphone on the PCB. The use of industry standard pick and place tools is recommended in order to limit the mechanical force exerted on the package.

Reliability specifications

8 Reliability specifications

The microphone sensitivity after stress must deviate by no more than 3dB from the initial value.

Table 10 Reliability specification

Test	Abbreviation	Test Condition	Standard
Low Temperature Operating Life	LTOL	T _a =-40°C, VDD=3.6V, 1000 hours	JESD22-A108
Low Temperature Storage Life	LTSL	T _a =-40°C, 1000 hours	JESD22-A119
High Temperature Operation Life	HTOL	T _a =+125°C, VDD=3.6V, 1000 hours	JESD22-A108
High Temperature Storage Life	HTSL	T _a =+125°C, 1000 hours	JESD22-A103
Temperature Cycling	PC + TC	Pre conditioning MSL-1	JESD22-A113
		1000 cycles, -40°C to +125°C, 30 minutes per cycle	JESD22-A104
Temperature Humidity Bias	PC + THB	Pre conditioning MSL-1	JESD22-A113
		T _a =+85°C, R.H = 85%, VDD=3.6V, 1000 hours	JESD22-A101
Vibration Test	VVF	20Hz to 2000Hz with a peak acceleration of 20g in X, Y, and Z for 4 minutes each, total 4 -cycles	IEC 60068-2-6
Mechanical Shock	MS	10000g/0.1msec direction ±x,y,z, 5 shocks in each direction, 5 shocks in total	IEC 60068-2-27
Reflow Solder ⁴⁾	RS	3 reflow cycles, peak temperature = +260°C	IPC-JEDEC J-STD-020D-01
Electrostatic Discharge -System Level Test	ESD - SLT	3 discharges of ±8kV direct contact to lid while V _{dd} is supplied according to the operational modes; (V _{dd} ground is separated from earth ground)	IEC-61000-4-2
Electrostatic Discharge - Human Body Model	ESD - HBM	1 pulse of ±2kV between all I/O pin combinations	JEDEC-JS001
Electrostatic Discharge - Charged Device Model	ESD - CDM	3 discharges of ±500V direct contact to I/O pins.	JEDEC JS-002
Latch up	LU	Trigger current from ±200mA	JESD78

⁴ The microphone sensitivity must deviate by no more than 1dB from the initial value after 3 reflow cycles.
