## Detection of different colored objects at a certain distance

## Hardly affected by color

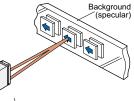

The color or size of the object does not affect its sensing performance.

## Robust

Its robust enclosure is made of die-cast zinc alloy.

## Hardly affected by background

The sensor does not detect the background beyond the set distance since it is of distance adjustable type.

(However, changing the angle of the sensor ) is necessary when the background object has a specular surface.

## **BASIC PERFORMANCE**

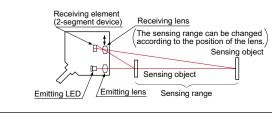

## High-speed response time: 1 ms

It can be used on a high speed assembly line.

## Adjustable Range Reflective Type

The sensing range for which the sensor detects an object is determined by the incident beam angle, regardless of the incident light intensity.

#### RX-LS200

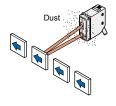

## ENVIRONMENTAL RESISTANCE Waterproof IP67 (IEC)

The equipment on which the sensor is mounted can be washed without any problem.

Note: However, take care that if it is exposed to water splashes during operation. It may detect a water drop itself.

## Insusceptible to dust

The sensing performance is less affected by dust as it does not depend on the incident light intensity.

## ORDER GUIDE

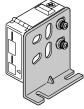

Туре	Appearance	Sensing range	Model No.	Output
NPN output		50 to 200 mm 1.969 to 7.874 in	RX-LS200	NPN open-collector transistor
PNP output			RX-LS200-P	PNP open-collector transistor

#### 5 m cable length type

5 m 16.404 ft cable length type (standard: 3 m 9.843 ft) is also available for NPN output type. Model No.: RX-LS200-C5

#### Accessory

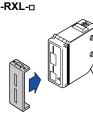

• MS-RX-1 (Sensor mounting bracket)

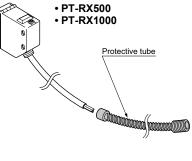

Two M4 (length 16 mm 0.630 in) hexagon-socket-head bolts are attached.

## **OPTIONS**

Designation	Model No.		Description		Narrow-view slit mask ∙ OS-RXL-□
Narrow-view slit mask	OS-RXL-1	Slit size	2.5 × 24 mm 0.098 0.945 in	The sensing view is narrowed laterally so that the effect of the object's surroundings is reduced.	
	OS-RXL-2		3.0 × 24 mm 0.118 0.945 in		
	OS-RXL-3		3.5 × 24 mm 0.138 0.945 in		
Protective tube	PT-RX500	Length	500 mm 19.685 in	Cable is protected from external forces. It does not rust as it is made of stainless steel.	Protective tube
	PT-RX1000		1,000 mm 39.370 in		nm stainless steel.

## SENSING CHARACTERISTICS (TYPICAL)

## **PRECAUTIONS FOR PROPER USE**

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

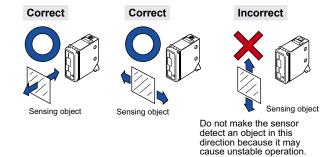

## Mounting

• The tightening torque should be 1.17 N·m or less.

intersection of the "<" mark on the lens face and the "I" line

· Care must be taken regarding the sensor mounting direction with respect to the object's direction of movement.

- When detecting a specular object (aluminum or copper foil) or an object having a glossy surface or coating, please take care that there are cases when the object may not be detected due to a small change in angle, wrinkles on the object surface, etc.
- When a specular body is present below the sensor, use the sensor by tilting it slightly upwards to avoid wrong operation.

 If a specular body is present in the background, wrong operation may be caused due to a small change in the angle of the background body. In that case, install the sensor at an inclination and confirm the operation with the actual sensing object.

Refer to p.1552~ for general precautions.

 Do not install the sensor at a distance of less than 50 mm 1.969 in from the object because the sensing is unstable in this range.

## Wiring

These bars indicate the sensing range

distance adjuster is set at the sensing

range of 200 mm 7.874 in, 100 mm

3.937 in and 50 mm 1.969 in long,

each, with white non-glossy paper.

with respective objects when the

 The output of RX-LS200-P does not incorporate a shortcircuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

#### Use conditions to comply with CE Marking

· Following work must be done in case of using this product as a CE marking (European standard EMC Directive) conforming product.

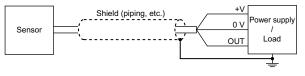

Ensure that the shield is connected to 0 V or the actual ground.

• In case of connecting a sensor to power supply 0 V by using a shield (piping, etc.)

Note: The shield (piping, etc.) must be insulated.

• In case of grounding by using a shield (piping, etc.)

## Others

· Do not use during the initial transient time (50 ms) after the power supply is switched on.

## PRECAUTIONS FOR PROPER USE

#### **Distance adjustment**

#### Adjusters

DIMENSIONS (Unit: mm in)

#### Refer to p.1552~ for general precautions. FIBER SENSORS

### Adjusting procedure

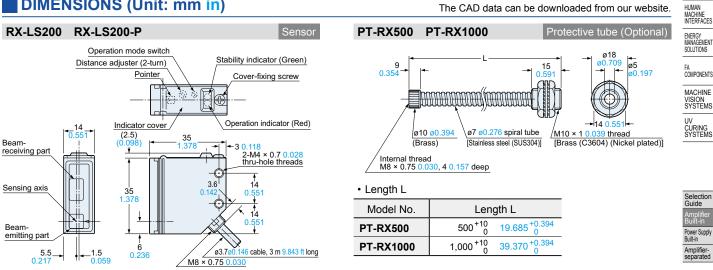

#### <When a sensing object moves horizontally to the sensor>

			SENSORS	
Step	Description	Distance adjuster	MICRO PHOTO- ELECTRIC SENSORS	
1	Turn the distance adjuster fully counterclockwise to the minimum sensing range position (50 mm 1.969 in approx.). (Do not turn excessively.)	Turn	AREA SENSORS SAFETY LIGHT CURTAINS / SAFETY	
2	Place an object at the required distance from the sensor, turn the distance adjuster gradually clockwise, and find out point "(A)" where the	TOT I	COMPONENTS PRESSURE / FLOW SENSORS	
	sensor changes to the light received condition.		INDUCTIVE PROXIMITY SENSORS	
3	Remove the object, turn the distance adjuster further clockwise, and find out point " <sup>(B)</sup> " where the sensor changes to the light received		PARTICULAR USE SENSORS	
	condition again with only the background.	B A A	SENSOR OPTIONS	
	When the sensor does not go to the light received condition even if the adjuster is fully turned clockwise, point ""B" is this extreme point.		SIMPLE WIRE-SAVING UNITS	
		<u> </u>	WIRE-SAVING SYSTEMS	
4	The optimum position to stably detect objects is the center point between " $\textcircled{B}$ " and " $\textcircled{B}$ ".	®, T	MEASURE- MENT SENSORS	
		Optimum position	STATIC CONTROL DEVICES	
When a sensing object is approaching / moving away from the sensor>				

<When a sensing object is approaching / moving away from the sensor>

• Follow only steps (1) and (2) respectively. Since the sensing point may change depending on the sensing object, be sure to check the operation with the actual sensing object.
