

DANCEVM-A

The Digital ANC EVM-A (DANCEVM-A) allows on-the-fly tuning of Digital Noise-Cancelling headphones using PurePath™ Studio.

WARNING

EXPORT NOTICE

Recipient agrees to not knowingly export or re-export, directly or indirectly, any product or technical data (as defined by the U.S., EU, and other Export Administration Regulations) including software, or any controlled product restricted by other applicable national regulations, received from Disclosing party under this Agreement, or any direct product of such technology, to any destination to which such export or re-export is restricted or prohibited by U.S. or other applicable laws, without obtaining prior authorization from U.S. Department of Commerce and other competent Government authorities to the extent required by those laws. This provision shall survive termination or expiration of this Agreement. According to our best knowledge of the state and end-use of this product or technology, and in compliance with the export control regulations of dual-use goods in force in the origin and exporting countries, this technology is classified as follows:

US ECCN: 3E991
EU ECCN: EAR99

And may require export or re-export license for shipping it in compliance with the applicable regulations of certain countries.

1 Introduction

This document describes the hardware and software configuration of the DANCEVM-A board.

2 Getting Started

The DANCEVM-A has 3 audio CODECs (AIC3254 and two AIC3256s) and an audio amplifier (TPA6130A2). For simplicity, these devices are labeled as follows:

1. Music Chip – AIC3254 (U10)
2. DANC_L – AIC3256 (U4)
3. DANC_R – AIC3256 (U3)
4. HP Amp – TPA6130A2 (U1)

Follow the steps in this section to configure the hardware and software for music playback. Further details can be found in the DANC Programmer Guide. Specifically, refer to its MiniDSP Code Loading Process section.

2.1 Hardware Setup

The default jumper settings are shown in [Figure 1](#). This assumes a hybrid ANC configuration. Refer to the EVM schematic ([Section 4.1](#)) and [Section 3](#) for details.

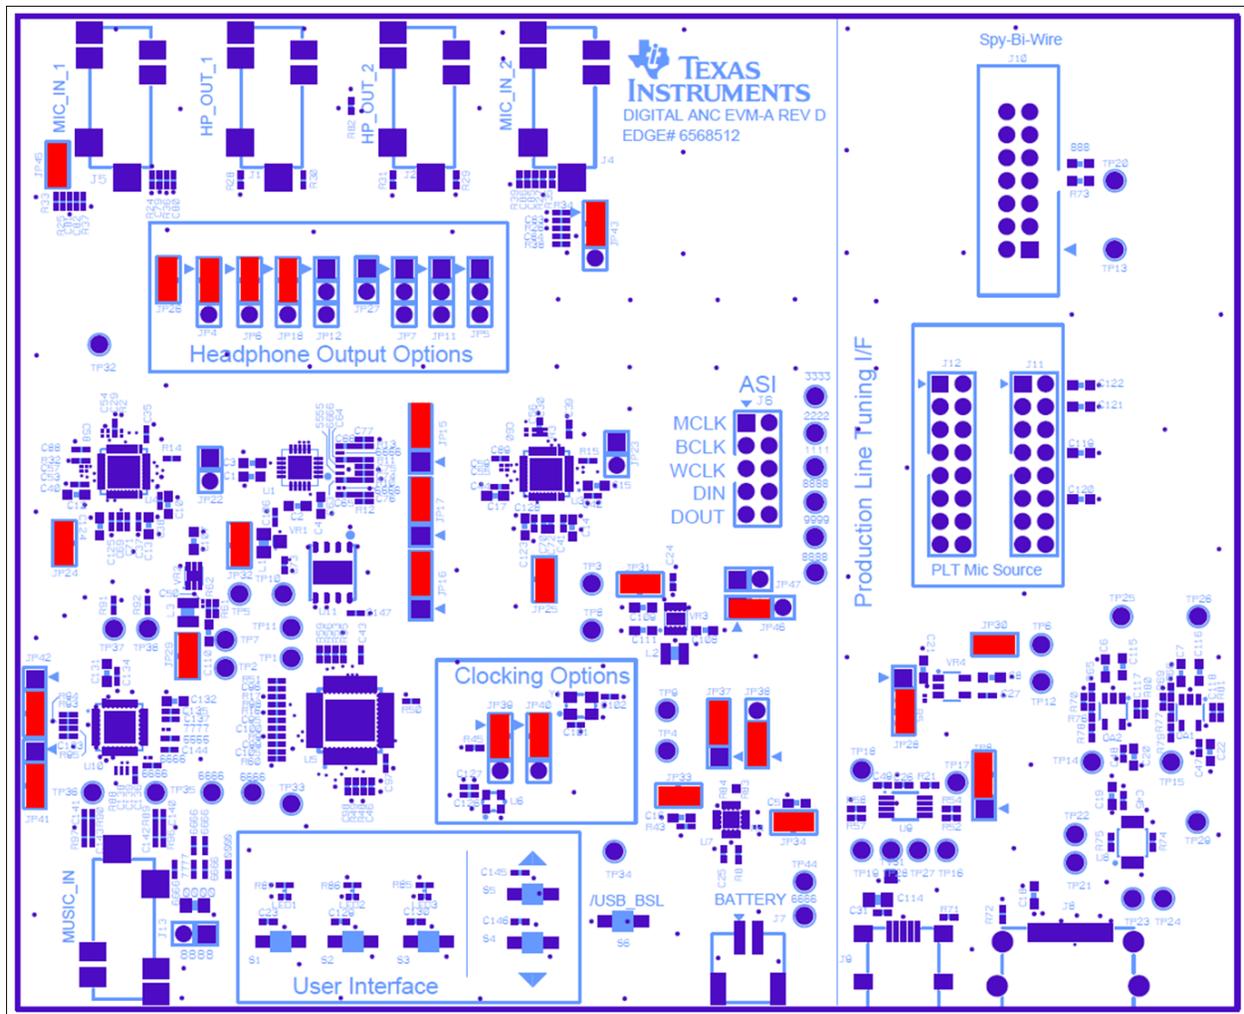

Figure 1. Default DANCEVM-A Jumper Settings

2.2 Loading Code from PurePath Studio

This subsection describes how to download the ANC code from PurePath Studio (PPS) into the DANCEVM-A chips through USB. Tuning details are not discussed in this document.

CAUTION

Never wear headphones while adjusting any PurePath Studio parameter. Setting an incorrect value will cause very loud speaker feedback.

1. Unzip the DANC Package and locate the DANC Programmer Guide. That document specifies where to obtain the required software packages.
2. Place the PurePath components found in `.\\Components` folder of the DANC Package into `[User]\\My Documents\\Texas Instruments Inc\\PurePath Studio (Portable Audio) MiniDSP 5.95\\UserComponentLibrary`.
3. Configure the board per the jumper settings shown in [Section 2.1](#), or as required by the application.
4. Connect a USB cable to the USB jack.
5. Open two instances of PurePath Studio.

6. In one instance, open the desired **Music Chip** process flow (for example, ATHY1-MUS-24.0000-3BQ-LOWPWR). It should look something similar to [Figure 2](#).
7. Set the TargetBoard property of the Framework to **USB**.

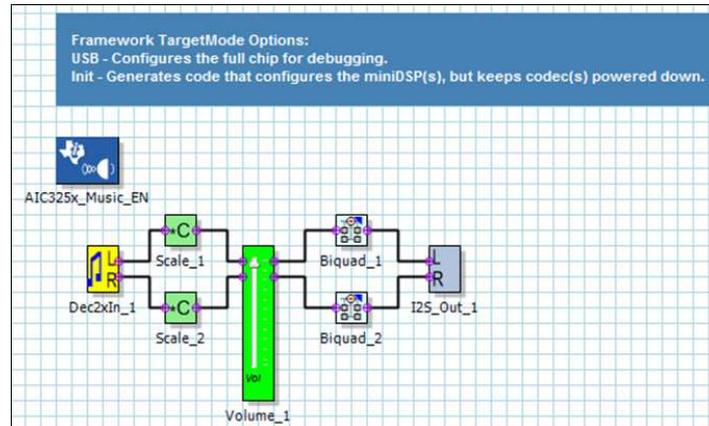

Figure 2. Generic Music Chip Process Flow

8. Select *Build*→*Download Code*. Select *FWIDMusic Chip*.

Figure 3. PPS Device Select (Music Chip)

9. Cancel any additional messages.
10. In the other PurePath instance open the desired **DANC** process flow (for example, ATHY1-DNC-24.0000-B-HY-LOWPWR_CASCADE). It should look something similar to [Figure 4](#).
11. Set the TargetBoard property of the Framework to **USB**.

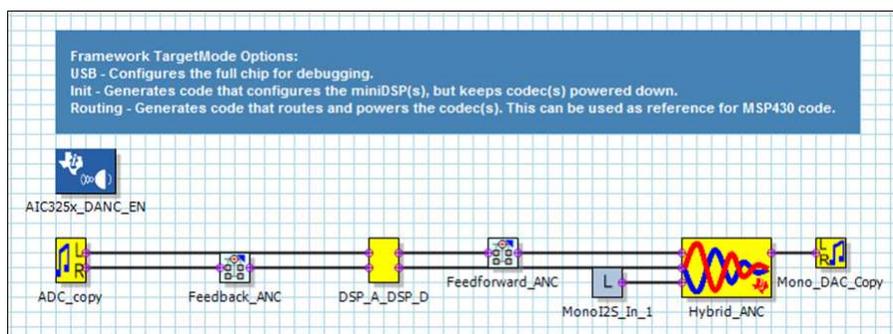

Figure 4. Generic DANC Chip Process Flow

12. Select *Build*→*Download Code*. Select *FWIDDANC_L Chip*.

Figure 5. PPS Device Select (DANC Chips)

13. Runtime parameters can be changed on-the-fly in either PurePath instance.
14. Click the **ANC** component in the **DANC** process flow. Observe the **Properties** window on the right. The **Control_Coeff** controls the master volume. The **ANC_Gain**, **Feedforward_Gain** and **Feedback_Gain** control the respective microphone gain into the ANC block. The **Music_Gain** controls the music mix level. All these gains are linear; a 0 disables the control.

Figure 6. Feedback ANC Component Properties

Figure 7. Hybrid ANC Component Properties

3 DANCEVM-A Default Jumper Settings

The DANCEVM-A default jumper settings are shown in [Table 1](#).

Table 1. DANCEVM-A Default Jumper Settings

Label	Default Position	Description	Label	Default Position	Description
Headphone Output Options (Sheet 5)			DANC Chip Options (Sheet 3 and Sheet 4)		
JP26	On	Grounds HP_OUT_1 sleeve	JP45	On	MIC_IN_1 tip connected to circuit
JP4	1-2	—	JP24	On	DANC_L HP not in GCHP
JP6	1-2	—	JP22	Off	DANC_L DOUT floating
JP18	1-2	—	JP43	1-2	MIC_IN_2 ring connected to DANC_R
JP12	Off	—	JP25	On	DANC_R HP not in GCHP
JP27	Off	Grounds HP_OUT_2 sleeve	JP23	Off	DANC_R DOUT floating
JP7	Off	—	JP45	On	MIC_IN_1 tip connected to circuit
JP11	Off	—	JP24	On	DANC_L HP not in GCHP
JP5	Off	—	JP22	Off	DANC_L DOUT floating
TPA6130A2 Input Options (Sheet 5)			Power Supply Options (Sheet 7)		
JP16	2-3	LM source = ground	JP46	1-2	Power Save disabled
JP17	2-3	RP source = DANC_R_LOL	JP47	Off	MSP PS control disabled
JP15	2-3	RM source = ground	JP37	2-3	EN1 = 0
Clocking Options (Sheet 6)			JP38	1-2	EN2 = 1
JP39	1-2	—	PLT Options (Sheet 8)		
JP40	1-2	—	JP28	2-3	VPLT disabled
Music Chip Options (Sheet 2)			JP8	2-3	PLT I ² C buffer disabled
JP48	Off	Ground loop break circuit enabled	PLT Microphone Source (Sheet 5)		
JP41	2-3	Music DIN source = '0'	J12	All Off	Selects between LO or HP
JP42	2-3	Music DOUT pin to DIN net	J11	All Off	Routes mics to the PLT
Current Measurement (Sheet 7 and Sheet 8)					
JP31	On	VSYS to VIO			
JP29	On	VSYS to DVDD			
JP32	On	VSYS to +1.8 V			
JP34	On	Battery to System			
JP33	On	Charger output to VSYS			
JP30	On	VSYS to VPLT			

4 DANCEVM-A Schematics, Layout Views and Bill of Materials

4.1 DANCEVM-A Schematics

The DANCEVM-A schematic is provided in the following pages.

Digital ANC EVM-A

1. Table of Contents
2. Music Chip
3. DANC_L Chip
4. DANC_R Chip
5. HP Amp Chip / ASI / Misc
6. MSP430 / Clocking
7. Power Supplies / Battery Charger
8. Production Line Tuning (PLT) Interface
9. Revision History

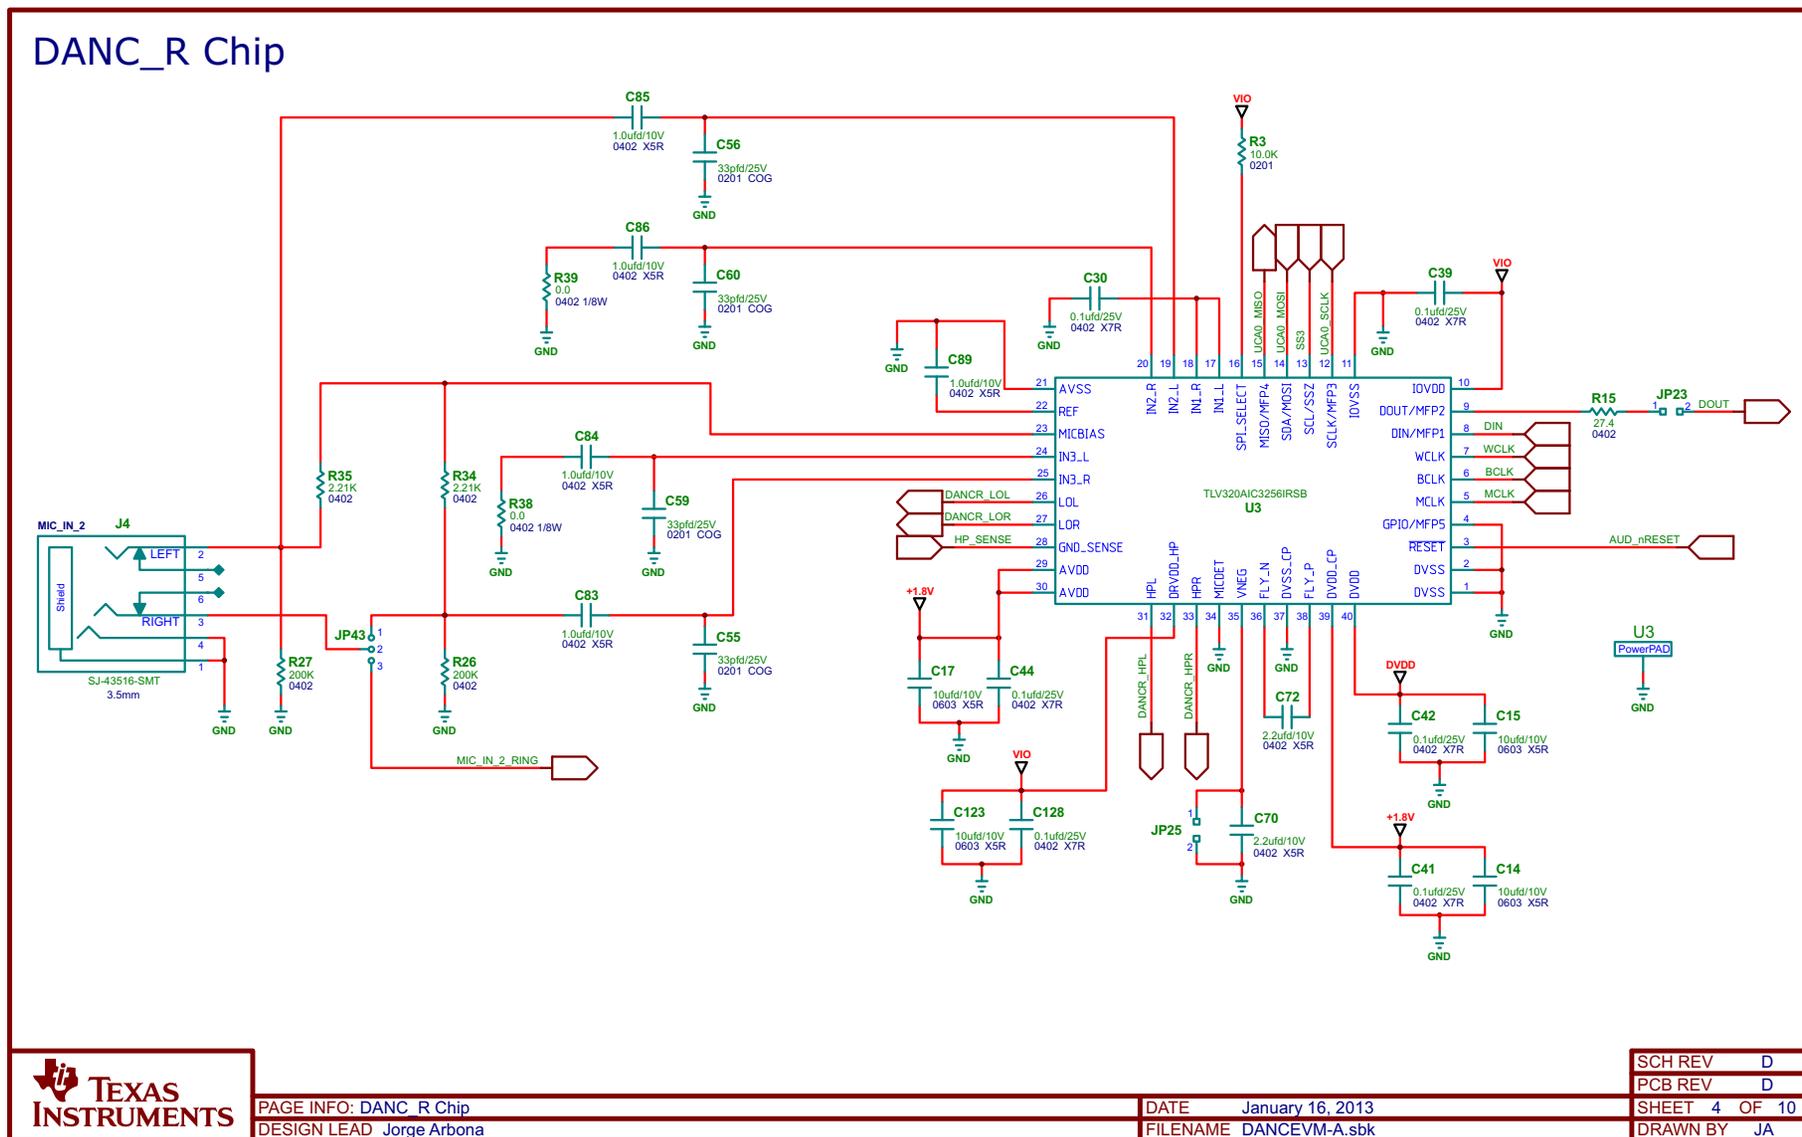

Figure 11. DANCEVM-A Schematic - Page 4 of 10

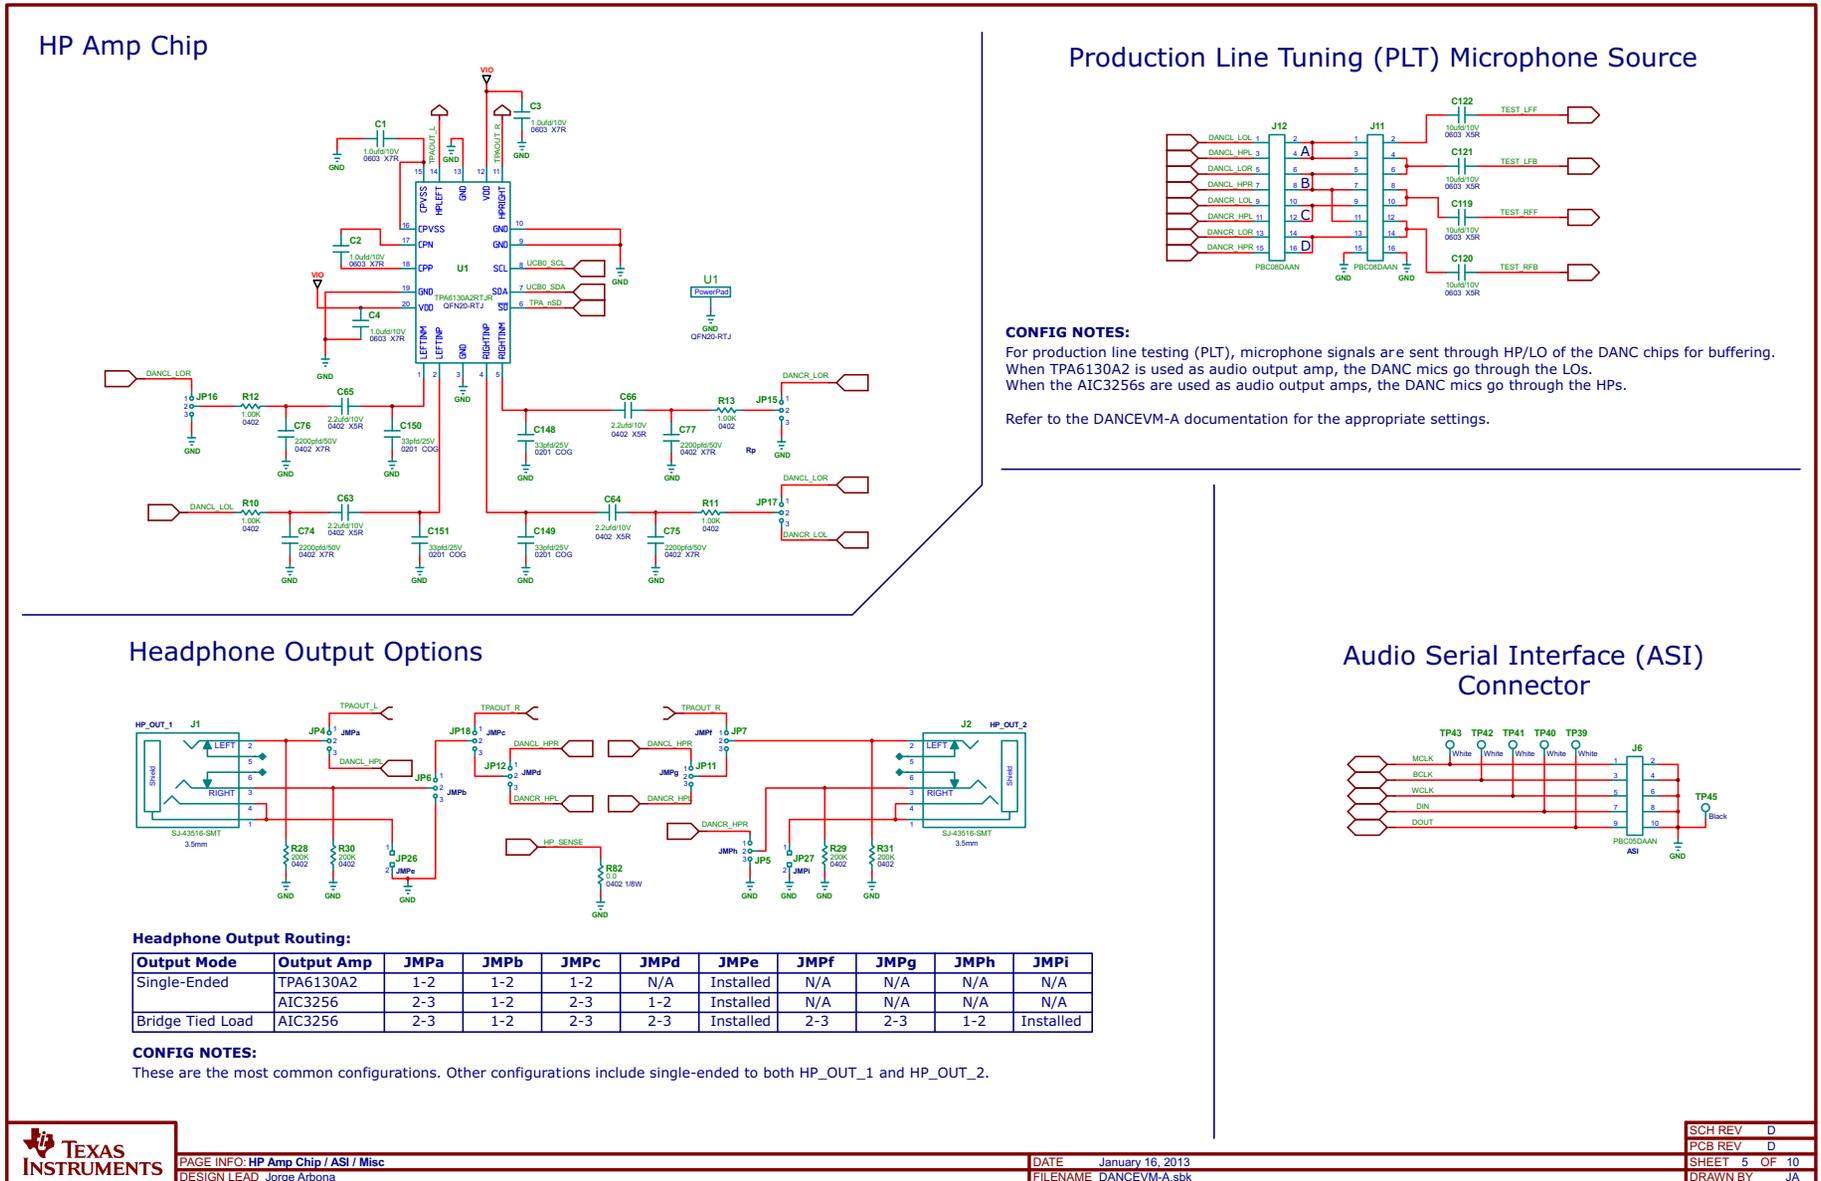

Figure 12. DANCEVM-A Schematic - Page 5 of 10

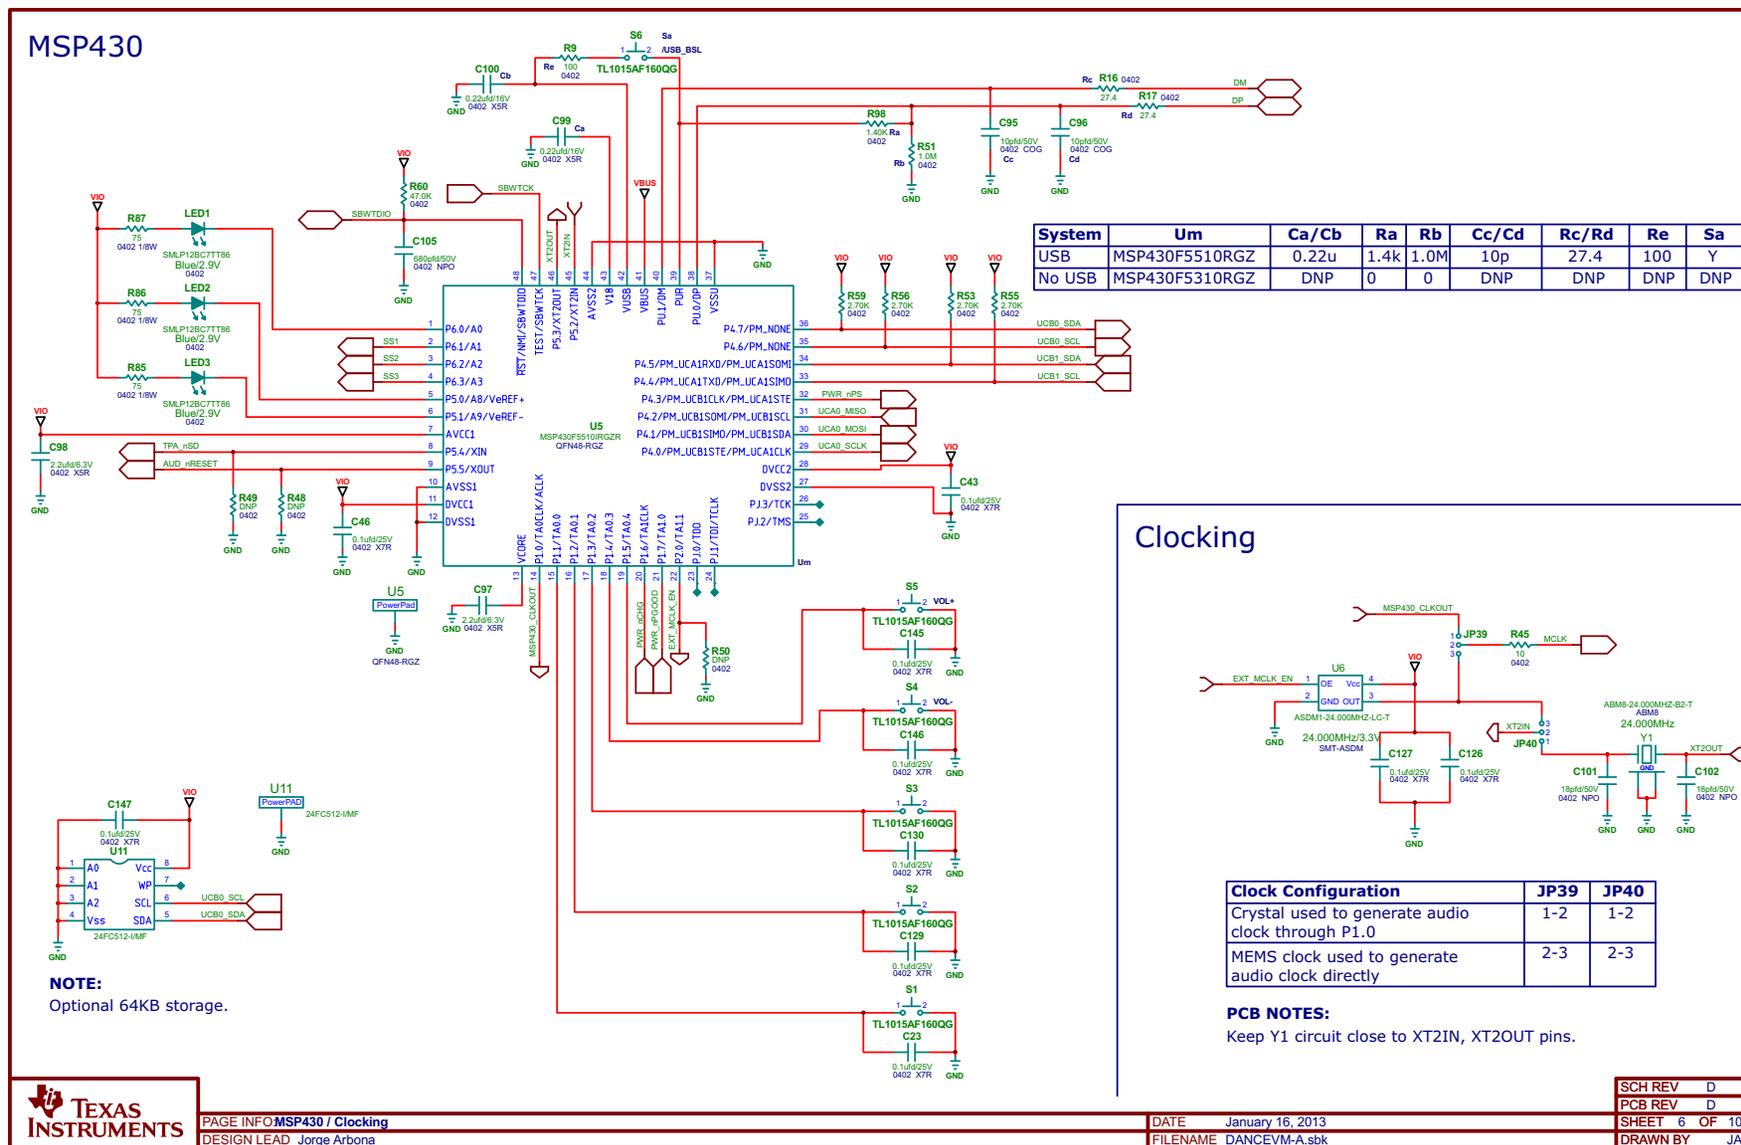

Figure 13. DANCEVM-A Schematic - Page 6 of 10

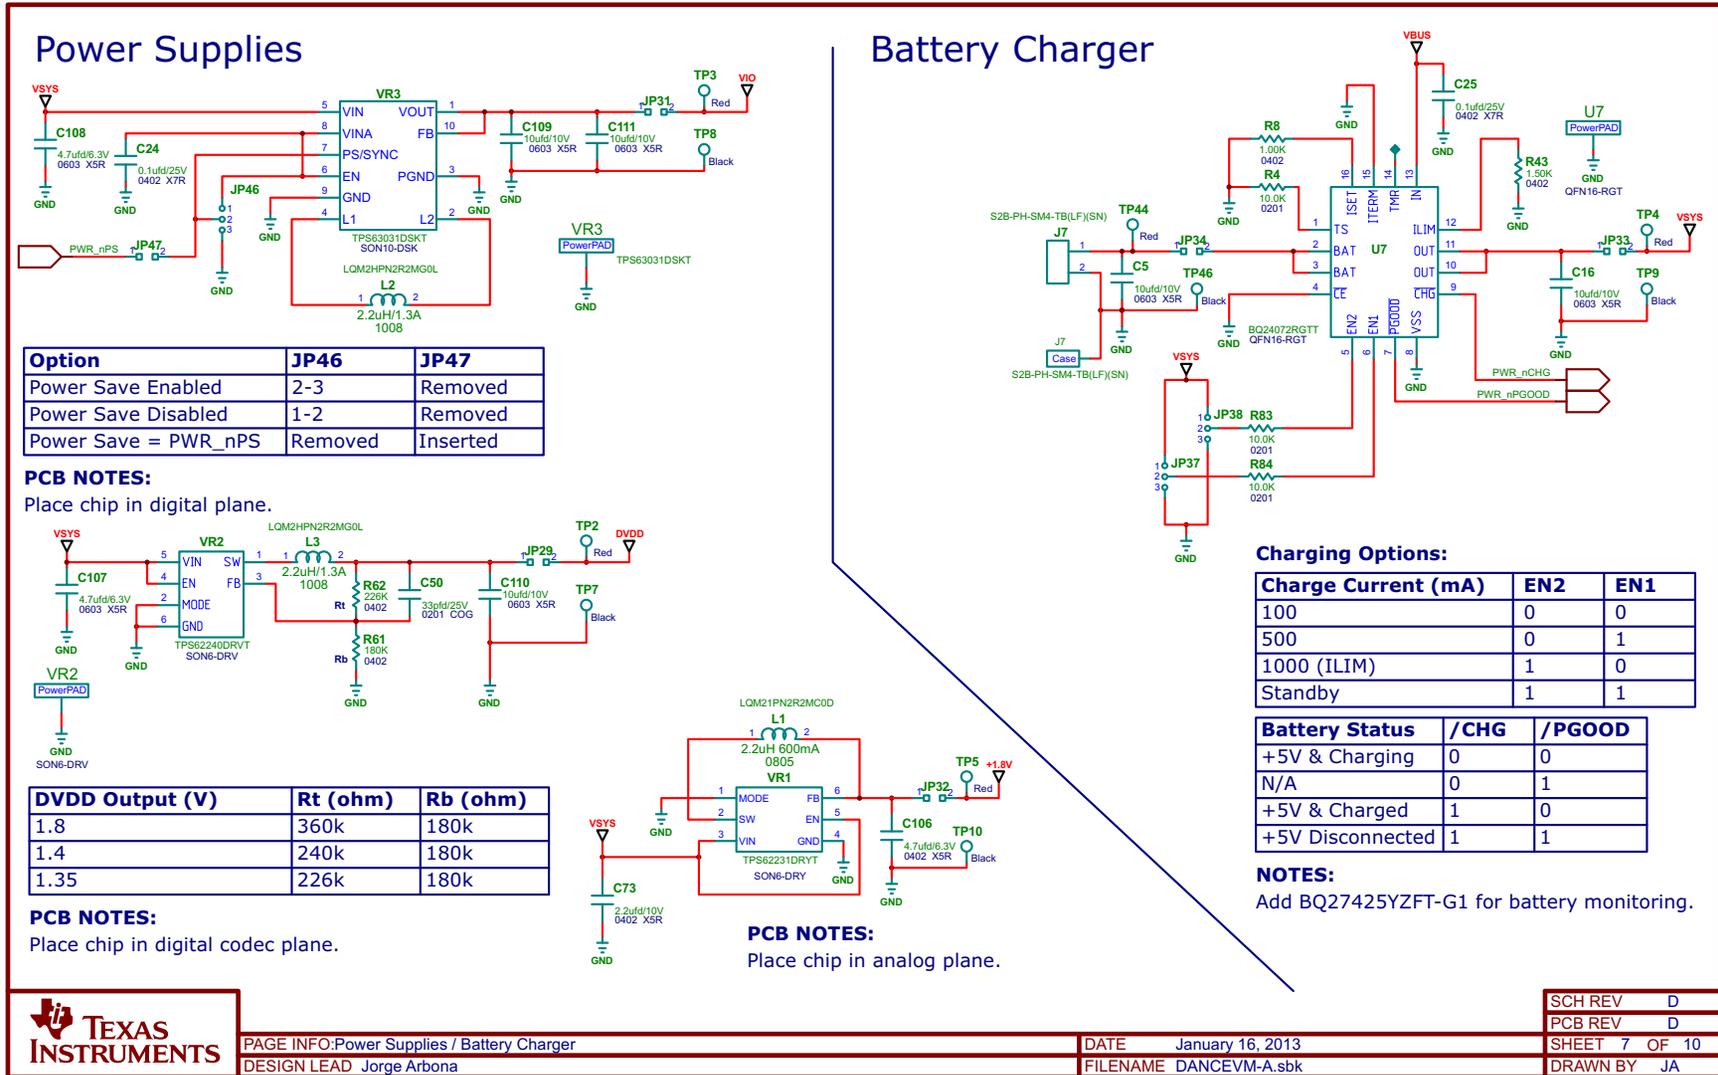

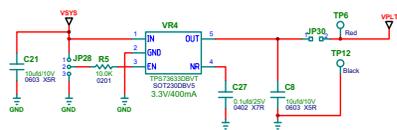

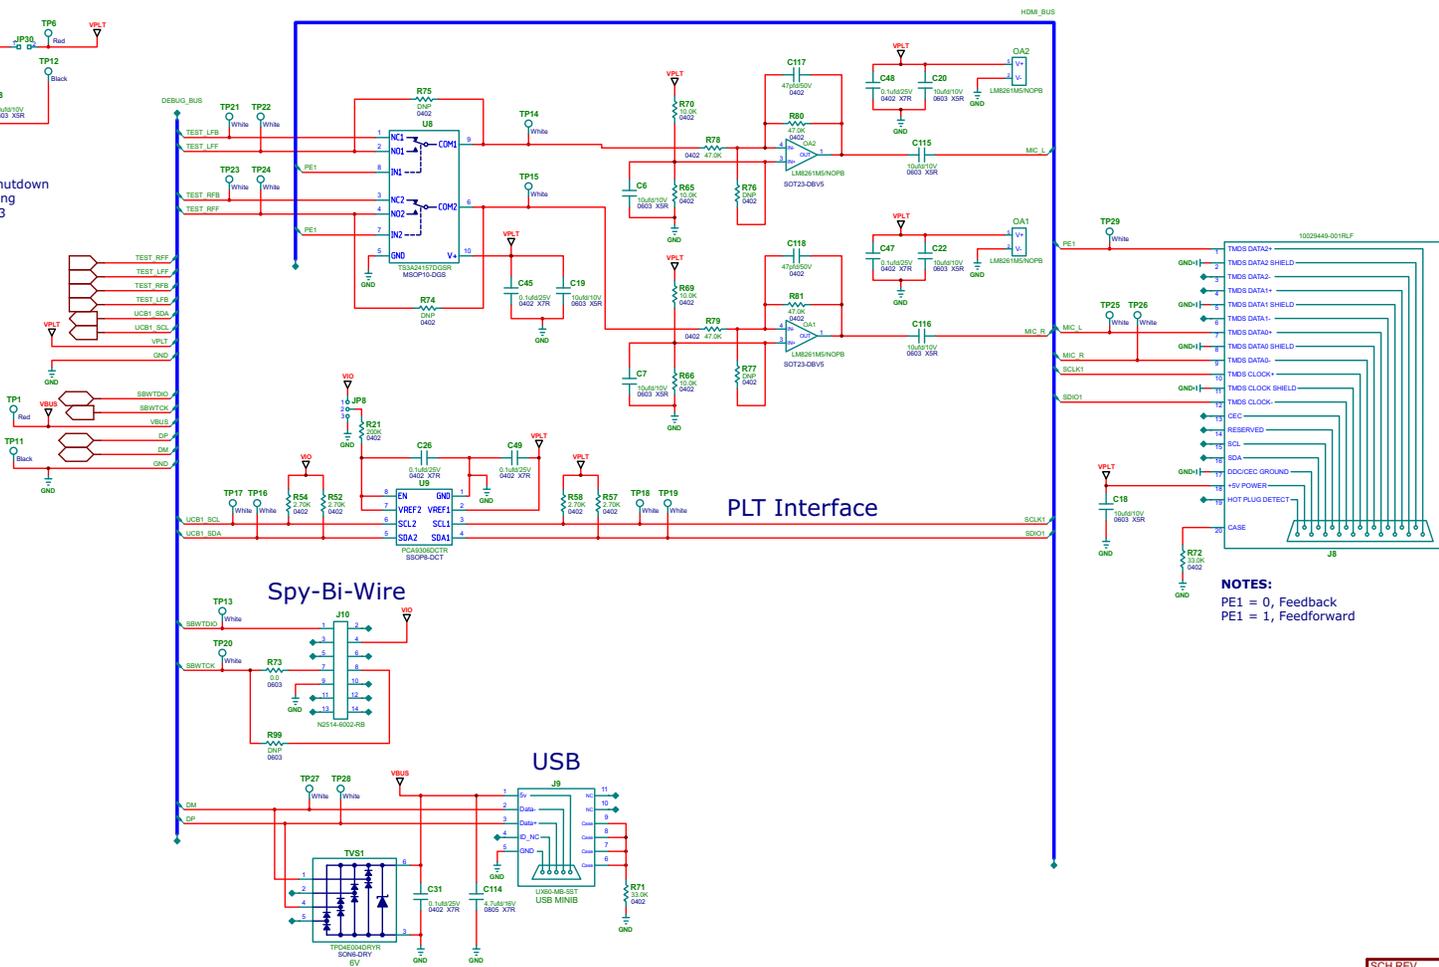

Figure 14. DANCEVM-A Schematic - Page 7 of 10

Production Line Tuning (PLT)

NOTES:

A separate supply is used to keep system shutdown current independent of Production Line Tuning block. JP28 can set to 2-3 and JP8 set to 2-3 when measuring battery life of the system.

NOTES:
PE1 = 0, Feedback
PE1 = 1, Feedforward

TEXAS INSTRUMENTS DISCLAIMER

The information and materials ("Materials") provided here are provided by Texas Instruments Incorporated ("TI") as a service to its customers and/or suppliers, and may be used for informational purposes only, and only subject to the following terms. By downloading or viewing these Materials, you are signifying your assent to these terms.

- 1.) These preliminary evaluation schematics are intended for use for PRELIMINARY ENGINEERING DEVELOPMENT AND EVALUATION PURPOSES ONLY and are not considered by Texas Instruments to be fit as a basis for establishing production products or systems. This information may be incomplete in several respects, including but not limited to information relating to required design, marketing, and/or manufacturing-related protective considerations and product safety measures typically found in the end-product incorporating the goods.
- 2.) Accordingly, neither TI nor its suppliers warrant the accuracy or completeness of the information, text, graphics, links or other items contained within the Materials. TI may make changes to the Materials, or to the products described therein, at any time without notice. TI makes no commitment to update the Materials.
- 3.) TI assumes no liability for applications assistance, customer product design, software performance, or services that may be described or referenced in the Materials. The user assumes all responsibility and liability for proper and safe design and handling of goods. Accordingly, the user indemnifies TI from all claims arising from its use of the Materials.
- 4.) TI currently deals with various customers for products, and therefore our arrangement with the user will not be exclusive. TI makes no representations regarding the commercial availability of non-TI components that may be referenced in the Materials.
- 5.) No license is granted under any patent right or other intellectual property right of TI covering or relating to any combination, machine, or process in which such TI products or services might be or are used. Except as expressly provided herein, TI and its suppliers do not grant any express or implied right to you under any patents, copyrights, trademarks, or trade secret information.
- 6.) Performance tests and ratings, to the extent referenced in the Materials, are measured using specific computer systems and/or components and reflect the approximate performance of TI products as measured by those tests. Any difference in system hardware or software design or configuration may affect actual performance. Buyers should consult other sources of information to evaluate the performance of systems or components they are considering purchasing.
- 7.) Resale of TI's products or services with statements different from or beyond the parameters stated by TI for that product or service in official TI data books or data sheets voids all express and any implied warranties for the associated TI product or service, and is an unfair and deceptive business practice, and TI is not responsible for any such use.
- 8.) The Materials are copyrighted and any unauthorized use may violate copyright, trademark, and other laws. You may only download one copy for your internal use only, unless you are specifically licensed to do otherwise by TI in writing. This is a license, not a transfer of title, and is subject to the following restrictions: You may not:
 - (a) modify the Materials (including any associated warranties, conditions, limitations or notices) or use them for any commercial purpose, or any public display, performance, sale or rental;
 - (b) decompile, reverse engineer, or disassemble software Materials except and only to the extent permitted by applicable law;
 - (c) remove any copyright or other proprietary notices from the Materials;
 - (d) transfer the Materials to another person. You agree to prevent any unauthorized copying of the Materials. TI may terminate this license at any time if you are in breach of the terms of this Agreement. Upon termination, you will immediately destroy the Materials.
- 9.) THE MATERIALS ARE PROVIDED "AS IS" WITHOUT ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND INCLUDING WARRANTIES OF MERCHANTABILITY, NONINFRINGEMENT OF INTELLECTUAL PROPERTY, OR FITNESS FOR ANY PARTICULAR PURPOSE. IN NO EVENT SHALL TI OR ITS SUPPLIERS BE LIABLE FOR ANY DAMAGES WHATSOEVER (INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF PROFITS, BUSINESS INTERRUPTION, LOSS OF INFORMATION) ARISING OUT OF THE USE OF OR INABILITY TO USE THE MATERIALS, EVEN IF TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
