Side Leads (PSBXXW Models)
 L 98.5 x W 26.0 x H 21.85 mm
 (L 3.88 x W 1.02 x H 0.86 in.)
PSBXXE Dimensions on page 16

Terminal Blocks: "-T" Suffix
 L 154.2 x W 26.2 x H 21.85 mm
 (L 6.07 x W 1.03 x H 0.86 in.)

Bottom Leads with Studs: "-S" Suffix
 L 98.5 x W 26.0 x H 23.7 mm
 (L 3.88 x W 1.02 x H 0.93 in.)

FEATURES

- Non-linear 0-10V dimming profile with dim-to-off pre-loaded by default (10V to 9.0V=100%, 1.5V to 0.7V=1%, <0.7V=dim-to-off)
- UL Class P
- Class 2 output
- Class II power supply
- Lifetime: 50,000 hours @ Tc ≤ 75° C
- 90°C maximum case hot spot temperature
- IP20-rated case with silicone-based potting
- No TRIAC/ELV dimming for PSBXXE models, only 0-10V without dim-to-off dimming
- Surge protection:
 - IEC61000-4-5: 2 kV line to line/2 kV line to earth
 - 2.5 kV ring wave: ANSI/IEEE c62.41.1-2002 & c62.41.2-2002 category A
- Complies with ENERGY STAR®, DLC (DesignLight Consortium®), CA Title 24, and NEMA SSL-1-2016 technical requirements
- Meets IEEE 1789-2015 "no impact" recommended practices for flicker (0-10V dimming)
- Additional safety approvals when using the optional strain reliefs for models with "-T" suffix

PROGRAMMING

- Serial port programming
 - Current: 100% to 50% in each voltage range
 - Data log read: SKU, S/N, lot code, hours of operation, FW rev.
- Fully programmable and selectable 0-10V dimming profiles: Non-linear with dim-to-off, Logarithmic, Non-Linear without dim-to-off.

Wiring Diagram

APPLICATIONS

- Commercial & residential lighting
- Architectural lighting
- Indoor lighting

50, 40, 30 & 15 W Programmable CC Class 2 / Class II LED Driver with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

* The forward voltage (Vf) of the LED load should not exceed Vout Max. of the driver under worst case field operating conditions which are the Vf max. of the LED load under lowest temperature and highest forward current conditions. As a general design guideline, the nominal LED load Vf measured at the operating current and at room temperature should be ≤ Vout Nom. of the driver.

Notes:

1. For each model, **the default output current setting is the MINIMUM current.** Example: the default output current setting for the PSB50W-1200-42 is 600 mA.
2. For additional options of output current and output voltage, contact your sales representative or send an email to: SaveEnergy@erp-power.com
3. Please order the programming cable using the part number PROG-JACK-USB.
4. Strain reliefs for "-T" models are not included and can be ordered separately using part number SR2. Order quantity for SR2 is per strain relief, and 2 strain reliefs are needed for each driver.

Programming Cable

Part number: PROG-JACK-USB

Dimming performance may vary when the driver is operated near its minimum output voltage.
TRIAC/ELV Dimming Range	%	1		100	<ul style="list-style-type: none"> •When testing, if light is measured, dimming range is based on light output. If no light is measured, dimming range is based on percentage of output current. •Dimming performance is optimal when the driver is operated at its nominal output voltage matching the LED nominal V_f (forward voltage). Due to variances in the performance of TRIAC/ELV dimmers, PSB use with TRIAC/ELV dimming is recommended when a PSB driver is limited to being programmed from 80%-100% of maximum output current. •If using a PSB driver with a TRIAC/ELV while programmed from 50%-79% of maximum output current, ERP recommends use of the PHB series driver.
Start-up Time	ms		300	500	<ul style="list-style-type: none"> •Without any dimmer attached, and at nominal input voltages and nominal load •Measured from application of AC line voltage to 100% light output •Complies with ENERGY STAR® luminaire specification and CA Title 24
Isolation	The main DC output is certified and tested per UL8750 Class 2 or LED Class 2				

50, 40, 30 & 15 W Programmable CC Class 2 / Class II LED Driver with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

4 - 0-10 V DIMMING CONTROL (@25° C ambient temperature)

In the PSB series, several 0-10V dimming profiles can be selected, such as a logarithmic profile, a non-linear profile with 1% minimum dimming and dim-to-off, and a non-linear profile with 10% minimum dimming and no dim-to-off. Furthermore, every point in the non-linear dimming profile can be programmed using the programming software.

By default, the non-linear profile with 1% minimum dimming and dim-to-off (show in figure 1) is pre-loaded in the PSB series “W” models. Dim-to-off is not available on PSB series “E” models.

	Units	Minimum	Typical	Maximum	Notes
+Dim Signal, -Dim Signal		The PSB series operate only with 0-10V dimmers that sink current. The method to dim the output current of the driver is done via the +Dim/-Dim Signal pins. The +Dim/-Dim signal pins can be used to adjust the output setting via a standard commercial wall dimmer, an external control voltage source (0 to 10 Vdc), or a variable resistor when using the recommended number of LEDs. The dimming input permits 1% to 100% dimming.			
Dimming Profile (see figure 1)		100% of output current between 10 V and 9.0 V, Linear between 9.0 V and 1.5 V, 1% of output current between 1.5 V and 0.7 V, Output current off below 0.7 V.			
Dimming Range	%	1		100	When testing, if light is measured, dimming range is based on light output. If no light is measured, dimming range is based on percentage of output current.
High Level Voltage - A	V	8.9	9.0	9.1	
Low Level Voltage - B	V		1.5		
Dim to Off - C	V	0.6	0.7	0.8	
Dim to Off Hysteresis - D	V			+0.2	
Current Supplied by the +Dim Signal Pin	mA			1	
Output Current Tolerance While Being Dimmed	%			±8	The tolerance of the output current while being dimmed is ≤ ±8% until down to 1.5V.
Minimum Dimming Tolerance	%	0.8	1	2	
Isolation	The 0-10 V circuit is isolated from the AC input.

50, 40, 30 & 15 W Programmable CC Class 2 / Class II LED Driver with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

7 - PROTECTION FEATURES

Input Over Current Protection

The PSB series incorporates a primary AC line fuse for input over current protection to prevent damage to the LED driver and meet product safety requirements as outlined in Section 6.

Short Circuit and Over Current Protection

The PSB series is protected against short-circuit such that a short from any output to return shall not result in a fire hazard or shock hazard. The driver shall hiccup as a result of a short circuit or over current fault. Removal of the fault will return the driver to within normal operation. The driver shall recover, with no damage, from a short across the output for an indefinite period of time.

Internal Over temperature Protection

The PSB series is equipped with internal temperature sensor on the primary power train. Failure to stay within the convection power rating will result in the power supply reducing the available current (fold back) below the programmed amount. The main output current will be restored to the programmed value when the temperature of the built-in temperature sensor cools adequately.

Output Open Load Protection

When the LED load is removed, the output voltage of the PSB series is typically limited to 1.3 times the maximum output voltage of each model.

8 - OUTPUT POWER DE-RATING AT ELEVATED TEMPERATURES

The PSB series can be operated with cooling air temperatures above 50°C by linearly de-rating the total maximum output power (or current) by 2.5%/°C from 50°C to 70°C (see figure 2).

Figure 2

50, 40, 30 & 15 W Programmable CC Class 2 / Class II LED Driver with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

9 - PHASE-CUT DIMMING

Dimming of the driver is possible with standard TRIAC-based incandescent dimmers that chop the AC voltage as shown in Figure 3, or with ELV dimmers. During the rapid rise time of the AC voltage when the dimmer turns on, the driver does not generate any voltage or current oscillations, and inrush current is controlled. During the on-time of the AC input, the driver regulates the output current based upon the conduction angle. The RMS value of the driver output current is proportional to the on-time of the AC input voltage. When operating with an incandescent dimmer, the RMS output current varies depending upon the conduction angle and RMS value of the applied AC input voltage. Figure 4 shows the typical output current versus conduction angle at nominal input voltage.

Forward-phase (TRIAC) and reverse-phase (ELV) dimming work only at 120 Vac. There is no TRIAC/ELV dimming for available PSBXXE models, only 0-10V dimming is available at 220, 230 & 240 Vac.

The PSB series offers Tri-Mode Dimming™ compatibility with both phase-cut (reverse-phase and forward-phase) and 0-10V dimmers. Phase-cut dimming always has priority over 0-10 V dimming.

Due to variances in the performance of TRIAC/ELV dimmers, PSB use with TRIAC/ELV dimming is recommended when a PSB driver is limited to being programmed from 80%-100% of maximum output current. If using a PSB driver with a TRIAC/ELV while programmed from 50%-79% of maximum output current, ERP recommends use of the PHB series driver.

50, 40, 30 & 15 W Programmable CC Class 2 / Class II LED Driver with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

11 - 0-10 V DIMMING

The PSB series operate only with 0-10V dimmers that sink current. They are not designed to operate with 0-10V control systems that source current, as used in theatrical/entertainment systems. Developed in the 1980's, the 0-10V sinking current control method is adopted by the International Electrotechnical Commission (IEC) as part of its IEC Standard 60929 Annex E.

The method to dim the output current of the driver is done via the +Dim/-Dim Signal pins. The +Dim/-Dim Signal pins respond to a 0 to 10 V signal, delivering 1% to 100% of the output current based on rated current for each model. A pull-up resistor is included internal to the driver. When the +Dim wire (purple) is short circuited to the -Dim wire (pink) or to the -LED wire (blue), the output current turns off.

If the +Dim input is > 10 V or open circuited, the output current is programmed to 100% of the rated current.

When not used, the -Dim wire (pink) and to the +Dim wire (purple) can be individually capped or cut off. In this configuration, no dimming is possible and the driver delivers 100% of its rated output current.

The maximum source current (flowing from the driver to the 0-10V dimmer) supplied by the +Dim Signal pin is ≤ 1 mA. The tolerance of the output current while being dimmed shall be $\pm 8\%$ typical until down to 1.5 V.

In the PSB series, several 0-10V dimming profiles can be selected, such as a logarithmic profile, a non-linear profile with 1% minimum dimming and dim-to-off, and a non-linear profile with 10% minimum dimming and no dim-to-off. Furthermore, every point in the non-linear dimming profile can be programmed using the programming software.

By default, the non-linear profile with 1% minimum dimming and dim-to-off (show in figure 5) is pre-loaded in the PSB series. Dim-to-off is not available on PSB series "E" models. In this non-linear 0-10V dimming profile, 10V to 9.0V=100% of the output current, 1.5V to 0.7V=1%, <0.7V=dim-to-off (no output current).

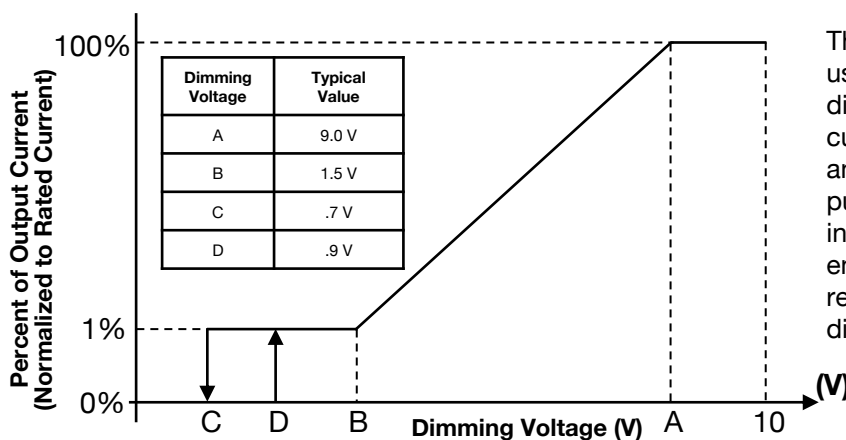

Figure 5

The non-linear curve is recommended when using standard in wall 0-10 V logarithmic dimmers to avoid having insufficient source current available to pull the dimmer up to 10V and to account for the inability of the dimmer to pull below approximately 0.9V. In these type of installations, the modified transfer function will ensure 100% light output and dimming to 1%, regardless of the number of drivers on the 0-10V dimming line.

12 - COMPATIBLE 0-10 V DIMMERS

- Lutron, Nova series (part number NFTV)
- Lutron, Diva series (part number DVTV)
- Leviton, IllumaTech series (part number IP710-DL)

50, 40, 30 & 15 W Programmable CC Class 2 / Class II LED Driver with Tri-Mode Dimming™ (TRIAC, ELV & 0-10 V)

13 - PROGRAMMING

The PSB series can be programmed by inserting the audio jack of the cable shown in figure 6 into the driver and by plugging the USB other end of the cable into a computer. **The driver does not need to be powered on during the programming process.**

When ordering the PSB series, please make sure you order a programming cable. The part number for the programming cable is “PROG-JACK-USB”.

Programming is done by using the ERP GUI (Graphical User Interface), which enables the user to adjust output current from 100% to 50%.

Please note that, for each model, the **default output current setting is the minimum current.** For example, the default output current setting for the PSB50W-1200-42 is 600 mA.

Furthermore, when connecting the driver to a computer using the programming cable, you can access the driver’s internal data log and read the following information: SKU, serial number, manufacturing lot code, hours of operation, firmware revision, and fault events: power failure, transients (short or surge), thermal events (i.e. number of times the case temperature has exceed the maximum case temperature of 90° C).

While programming drivers in a lot, the ERP GUI can interface with a label printer, which enables the user to add configuration labels to driver labels in order to highlight programmed output current. Listed below is the equipment needed to print labels.

Equipment	Part Number	Where to buy
Printer	TSC TC210	https://www.barcodefactory.com/tsc/printers/tc210/99-059a001-54lf
Ribbon	TSC Prem. Resin, 60mm x 110mm	https://www.barcodefactory.com/tsc/35-r060110-23cf
Labels	BAR-.81x.28-1-TT	https://www.barcodefactory.com/barcodefactory/labels/bar-.81x.28-1-tt

For more information, please refer to the GUI user’s manual at:
<https://www.erp-power.com/our-products/programming-software/>

14 - PREDICTED LIFETIME VERSUS CASE AND AMBIENT TEMPERATURE

Lifetime is defined by the measurement of the temperatures of all the electrolytic capacitors whose failure would affect light output under the nominal LED load and worst case AC line voltage. The graphs in figures 7 and 8 are determined by the electrolytic capacitor with the shortest lifetime, among all electrolytic capacitors. It represents a worst case scenario in which the LED driver is powered 24 hours/day, 7 days/week. The lifetime of an electrolytic capacitor is measured when any of the following changes in performance are observed:

- | | |
|--|--|
| 1) Capacitance changes more than 20% of initial value | 2) Dissipation Factor ($\tan \delta$): 150% or less of initial specified value |
| 3) Equivalent Series Resistance (ESR): 150% or less of initial specified value | 4) Leakage current: less of initial specified value |

Figure 7

Figure 8

Notes:

- The ambient temperature $T_{ambient}$ and the differential between $T_{ambient}$ and T_{case} mentioned in the above graphs are relevant only as long as both the driver and the light fixture are exposed to the same ambient room temperature. If the LED driver is housed in an enclosure or covered by insulation material, then the ambient room temperature is no longer valid. In this situation, please refer only to the case temperature T_{case} .
- It should be noted the graph "Lifetime vs. Ambient Temperature" may have an error induced in the final application if the mounting has restricted convection flow around the case. For applications where this is evident, the actual case temperature measured at the T_c point in the application should be used for reliability calculations.

18 - MECHANICAL DETAILS

- **Packaging:** Aluminum case
- **I/O Connections:**
 - **Models with flying leads:** 18 AWG on all leads, 22 AWG on 0-10V dimming wires, 203mm (8 in) long, 105°C rated, stranded, stripped by approximately 9.5 mm, and tinned. All the wires, on both input and output, have a 300 V insulation rating.
 - **Models with “T” suffix:** Terminal Blocks
 - **Models with “S” suffix:** Bottom Leads with Studs
- **Ingress Protection:** IP20 rated
- **Mounting Instructions:** The PSB driver case must be secured on a flat surface through the two mounting tabs, shown here below in the case outline drawings.

19 - OUTLINE DRAWINGS (PSBXXW MODELS WITH FLYING LEADS)

Dimensions: L 98.5 x W 26.0 x H 21.85 mm (L 3.88 x W 1.02 x H 0.86 in.)

Volume: 55.96 cm³ (3.41 in³)

Weight: 113 g (3.99 oz)

Figure 21

22 - OUTLINE DRAWINGS (MODELS WITH "-T" SUFFIX AND STRAIN RELIEFS)

Dimensions: L 212.6 x W 26.2 x H 19.85 mm (L 8.37 x W 1.03 x H 0.78 in)

All dimensions are in mm

Figure 24

Notes:

1. Strain reliefs for "-T" models are not included and can be ordered separately using part number SR2.
2. Strain reliefs allow the driver to operate as independent control gear. This designation allows the driver to be mounted outside of the luminaire. Without strain reliefs the driver must be mounted inside the luminaire.
3. Order quantity for SR2 is per strain relief, and 2 strain reliefs are needed for each driver.
4. Additional information regarding strain reliefs can be found under the accessories section on the ERP website.
