

# Technical Information

## HAW562

### Surge arresters

for DIN rail according to EN 60715

#### Application

Surge arresters are used to weaken residual currents from upstream lightning protection steps and to limit system-induced or system-generated overvoltage surges.

HAW562 units are primarily used in process automation and in measuring and communication technology within the chemicals, pharmaceuticals, water and wastewater sectors as well as in the food industry.

#### Your benefits

- Increased plant availability as surge arrester is perfectly matched to the electronic components involved in process automation and process measuring technology.
- Application in Ex areas - optionally available with intrinsically safe approvals.
- SIL2 (optional)
- Direct and indirect shield grounding
- Investment intensive measuring instruments protected.
- Vibration and shock tested according to EN 60068-2

## Function and system design

### Operating principle

The HAW562 surge arrester is used to protect electronic components from being destroyed by overvoltage. It ensures that overvoltage surges which occur in signal cables (e.g. 4 to 20 mA), in communication lines (Field buses) and in power lines are safely passed into the ground.

The functionality of the transmitter or the electronics component to be protected is not affected.

#### Operation of power supply protection units:

Using the impedance-free connection of the protection unit, interference voltage drops cannot be introduced on the power lines.

#### Operation of signal cable protection units:

Low and matched disconnection impedance between the individual protection steps within the unit guarantee high compatibility with the system to be protected.

### Available versions

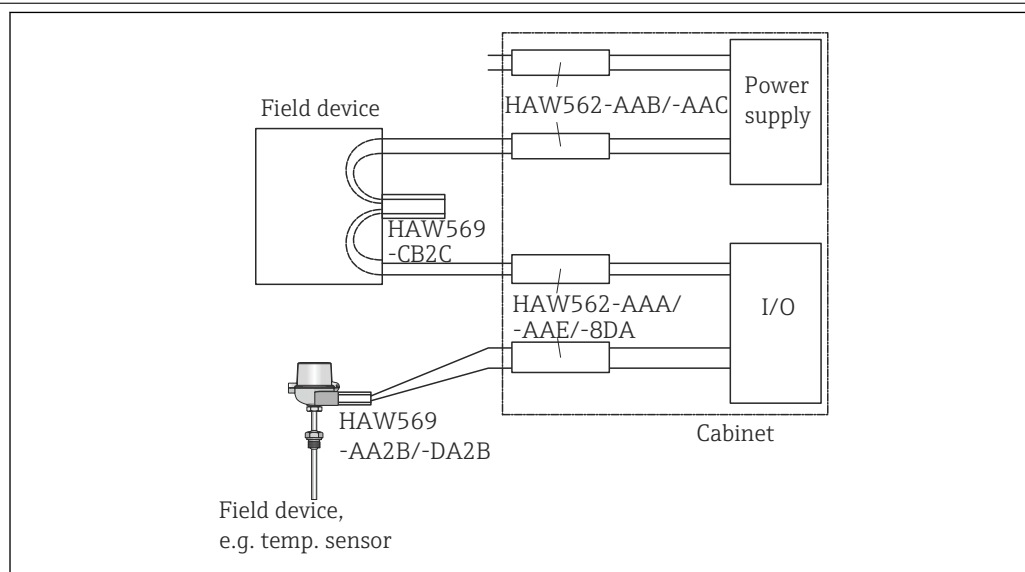

#### For power lines:

- HAW562-AAB to protect power lines in non-Ex areas, voltage range 10-55 V
- HAW562-AAC to protect power lines in non-Ex areas, voltage range 90-230 V

#### For signal cables and communication lines:

- HAW562-AAA to protect signal cables in non-Ex areas
- HAW562-8DA with Ex ia approval to protect signal cables
- HAW562-AAD to protect communication lines (RS485, Modbus, Profibus DP) in non-Ex areas
- HAW562-AAE protection module for Prosonic FMU90 in non-Ex areas

### System construction

1 Overview of system construction, HAW562 and HAW569

### Application

Overvoltage protection of various measurement instrumentation seen in the example of a water treatment plant.

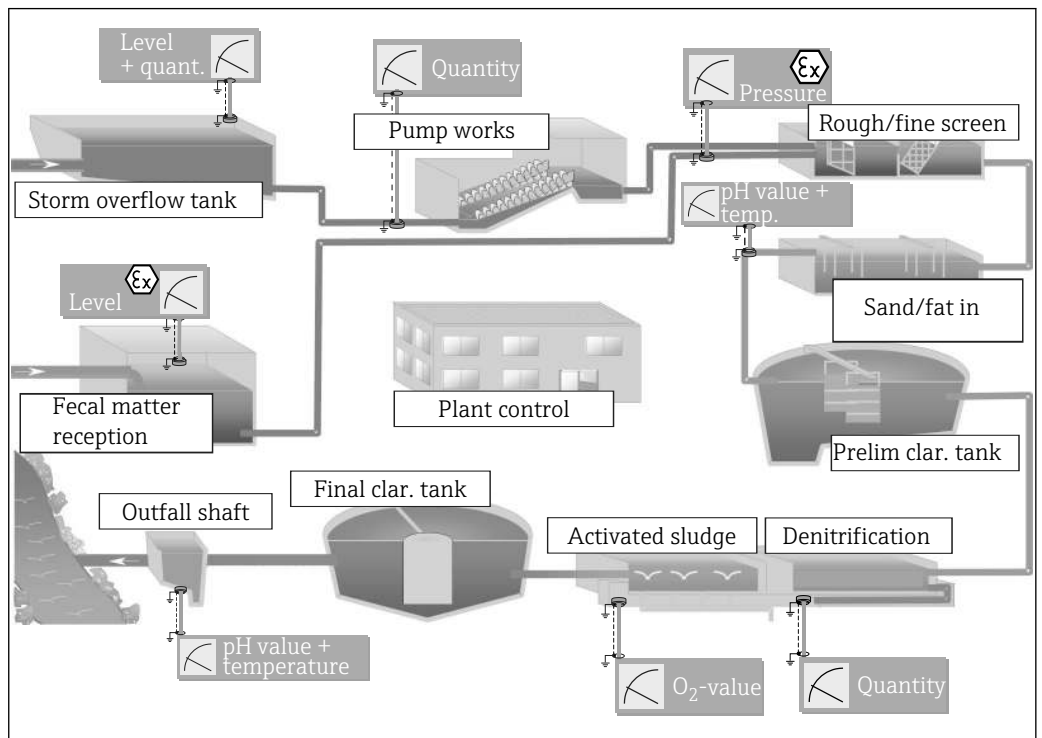

Conditions for the installation of surge arresters in a water treatment plant are:

- Lightning protection of plant and buildings
- Lightning protection of the main power supply distribution circuits in accordance with local regulations
- Low impedance foundation grounding
- Linked grounding of all buildings and plant (→ 2, 3)

A0015026-EN

2 Linked grounding (schematic diagram)

A0015027-EN

3 Water treatment example (schematic diagram)

**Fitting out measuring points

Connection instructions

Correct installation: HAW562-AAA, -AAD, -AAE, -8DA

A0015072

15 Correct installation of HAW562-AAA, -AAD, -AAE, -8DA; L and R of the cable have no influence on  $U_r$ ;  $U_p = U_r$ ;  $I_a$  current transfer

Incorrect installation 1: HAW562-AAA, -AAD, -AAE, -8DA

A0015073

16 Incorrect installation 1: HAW562-AAA, -AAD, -AAE, -8DA; L and R of the cable worsen  $U_r$ ;  $U_r = U_p + U_L + U_R$ ;  $I_a$  current transfer

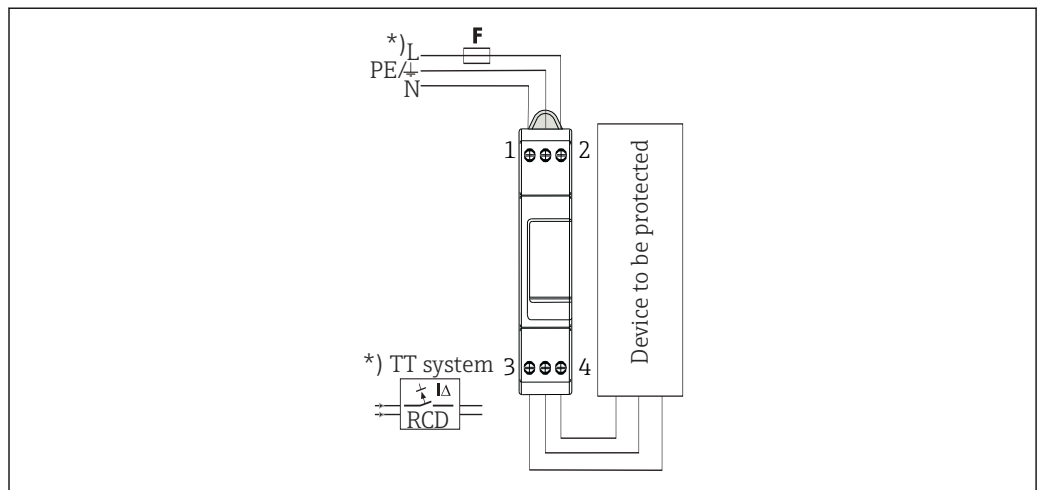

### Incorrect installation 2: HAW562-AAA, -AAD, -AAE, -8DA

A0015074

- 17 *Incorrect installation 2: HAW562-AAA, -AAD, -AAE, -8DA; Due to incorrect cable installation, interference is transmitted from unprotected cables to the protected cables.*

### Correct installation 1: Series wiring HAW562-AAB, -AAC

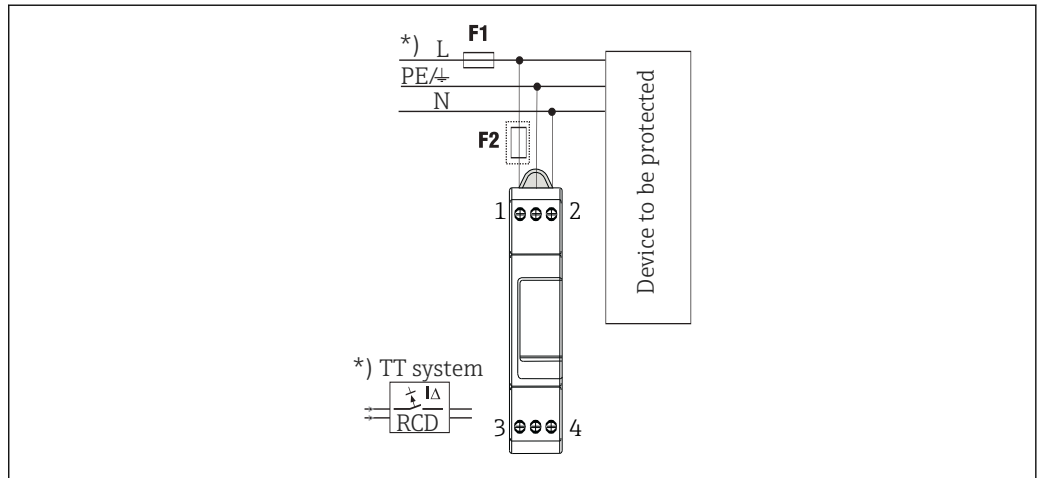

A0015081-EN

- 18 *Series wiring HAW562-AAB, HAW562-AAC*

A ground fault circuit interrupter must be provided in the TT system.

The back-up fuse must be  $F \leq 25$  A gG if serial wiring is selected. Parallel wiring must be selected for back-up fuses  $F > 25$  A.

**Correct installation 2: Parallel wiring HAW562-AAB, -AAC**

19 Parallel wiring HAW562-AAB, HAW562-AAC

A ground fault circuit interrupter must be provided in the TT system.

A second F2 ≤25 A gG back-up fuse must be provided for back-up fuse F1 > 25 A gG. No second F2 back-up fuse is required for F1 ≤25 A gG back-up fuses.

**Maximum line side overcurrent protection**

Only for unit types HAW562-AAB and HAW562-AAC:  
25 A gG or B 25 A

**Shield grounding**

As a rule, cable shielding must be grounded across its entire length. The shielding should be grounded by means of direct shield grounding at least at both ends of the cable.

If direct grounding of the shield at both ends is not possible or desired, e.g. to avoid low-frequency equalizing currents, indirect shield grounding should be provided at one end. Equalizing currents are thus avoided yet EMC requirements are still met. Indirect shield grounding occurs via a gas discharge tube installed in the overvoltage protection module.

A0015047

20 Direct and indirect shield grounding

- 1 Cable shielding
- 2 Direct shield grounding
- 3 Indirect shield grounding

Both direct and indirect shield grounding is possible using the shield grounding terminal available as an accessory (not for HAW562-AAB, -AAC, -AAE). The insulating strip included in the delivery is fitted on one of the two connector pins for this purpose. The free pin then provides the required shield grounding.

A0015045-EN

Single strand cables	0.08 to 4 mm <sup>2</sup> (28 to 12 AWG)	0.5 to 4 mm <sup>2</sup> (21 to 12 AWG)
Multi strand cables	0.08 to 2.5 mm <sup>2</sup> (28 to 14 AWG)	0.5 to 2.5 mm <sup>2</sup> (21 to 14 AWG)

## Human interface

### Display elements

#### HAW562-AAB/HAW562-AAC

Green display (= functional) in sight window. The energy transfer of the units is controlled by the integrated thermal monitoring system. In the event of a defect (= red display window - means thermal overload) this monitoring system will automatically separate the surge arrester from the power source.

All other HAW562 units do not have any display elements.

#### NOTICE

##### Defective surge arrester

Electric units connected are then no longer protected from overvoltages.

- ▶ Replace surge arrester immediately.

#### HAW562-AAA, HAW562-AAD, HAW562-AAE, HAW562-8DA

These units do not have any display elements.

#### NOTICE

##### Defective surge arrester

Signal cable short circuit.

- ▶ The short circuit is rectified when the defective protection module is taken out of the carrier. Electric units connected are no longer protected from overvoltages. Replace surge arrester immediately.

## Certificates and approvals

### CE mark

The measuring system meets the legal requirements of the EC Directives. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

### Ex approval

Information about currently available Ex versions (ATEX, FM, CSA, etc.) can be supplied by your E+H Sales Center on request. All explosion protection data are given in separate documentation which is available upon request.

### Other standards and guidelines

- IEC 61010: Safety requirements for electrical equipment for measurement, control and laboratory use
- IEC 61326: Electromagnetic compatibility (EMC requirements)

HAW562-AAB / -AAC	HAW562-AAA / -AAD / -AAE / -8DA
IEC 61643-1 EN 61643-11	IEC 61643-21:1999-07 A2, B2, C2, C3, D1

## Ordering information

Detailed ordering information is available from the following sources:

- In the Product Configurator on the Endress+Hauser website: [www.endress.com](http://www.endress.com) → Select country → Instruments → Select device → Product page function: Configure this product
- From your Endress+Hauser Sales Center: [www.endress.com/worldwide](http://www.endress.com/worldwide)

#### Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

## Accessories

### Shield grounding terminal

Only for HAW562-AAA, HAW562-AAD and HAW562-8DA, (→  12).

Order as an additional option in the product structure for HAW562 or separately via order code: RK01-AN

### Field housing

**Protective housing with integrated carrier rail to install up to four HAW562 devices:**

Integrated DIN rail; ground connection; GORE-TEX® filter; 2 sealing screws and 4 plastic M20 cable entries; material: die-cast aluminum, epoxy coating, degree of protection IP 66/NEMA4x.

Order as an additional option in the product structure for HAW562 or separately via order code: RK01-AO

 26 Dimensions in mm (dimensions in inches in brackets)

**Mounting bracket for mounting the protective housing on a wall or pipe:**

Order as an additional option in the product structure for HAW562 or separately via order code: RK01-AP

 27 Dimensions in mm (dimensions in inches in brackets)
