Description

The PI3DBS16215 is a 4-to-2 differential channel multiplexer/de-multiplexer switch. This solution can switch multiple signal types up to data rate of 20Gbps. Using a unique design technique, Diodes is able to minimize the impedance of the switch, so the attenuation observed through the switch is minimal. The unique design technique also offers a layout targeted for USB3.0, USB3.1, 10GE, Thunderbolt 3, and SAS3.0 signals, which minimizes the channel-to-channel skew as well as channel-to-channel crosstalk as required by high-speed signals.

Applications

- Routing high-speed differential signals, such as USB3.1 Gen 2, SAS3, PCIe4, TB3
