86mm 1U Front End DC-DC Power Supply Converter

NB: D1U86-D-1600-12-HB3DC variant shown

#### **FEATURES**

•	1600W	output	nower

- 93% efficiency at half load
- 12V main output
- 12V standby output of 30W
- 1U height: 3.4" x 7.75" x 1.59'
- 38.6 Watts per cubic inch density
- N+1 redundancy, including hot plugging (up to
- 8 in parallel)
- Current sharing on 12V main output, ORing FET
- Overvoltage, overcurrent, overtemperature protection
- Internal cooling fan (variable speed)
- TM / I<sup>2</sup>C interface monitoring and control
- RoHS compliant
- Two Year Warranty

#### PRODUCT OVERVIEW

The D1U86-D-1600-12-HBxDC series are highly efficient 1600 watt, DC input front end supplies with a 12V main output and a 12V (30W) standby. They have current sharing and up to 8 supplies may be operated in parallel. The supplies may be hot plugged, they recover from overtemperature faults, and have logic and PMBus monitoring and control. Their low profile 1U package and >38.6W/cubic inch power density make them ideal for delivering reliable, efficient power to servers, workstations, storage systems and other 12V distributed power systems.

ORDERING GUIDE					
Part Number	Power Output	Main Output	Standby Output <sub>1</sub>	Airflow	Handle Colour
D1U86-D-1600-12-HB4DC	1600W	10Vdo	10)/do	Back to front	Red
D1U86-D-1600-12-HB3DC	1600W	12Vdc	12Vdc	Front to back	Blue

Weight	1.108kg (2.44lbs)						

<sup>&</sup>lt;sup>2</sup> The load current of 100% refers to each power module max load connected in an N+1 configuration; therefore the total load will be "N" x 100% load of each module. The share accuracy of ±5% is a fixed percentage irrespective of the total loading and number of units connected in parallel.

PROTECTION CHARACTERISTICS									
Output Voltage	Parameter	Conditions	Min.	Тур.	Max.	Units			
	Overtemperature (intake)	An OTP warning will be issued via the PMBus interface when the air inlet exceeds 70°C; however the power module shall not shut down until critical internal hotspot temperatures are exceeded.		70		°C			
	Overtemperature (hotspots)	The unit will shut down when internal hot spot exceed the derating guide lines and automatically recovers when the unit is cooled down. The unit will shut down due to hot spot at ambient temperature between 55°C-60°C with main 12V at full load.		55-60		C			
	Overvoltage	Latching	13.2		14.4	V			
12V	Overcurrent	For overloads (slow) over current events a 147A nominal constant current will be sustained until the output voltage drops below 3VDC. At this point the unit shall shut down after a 1sec period and remain in that condition for 10secs. The cycle will then repeat. For severe (short circuit) over current events the unit shall shut down within 1ms and remain in this condition for 200ms before attempting a re-start. the unit shall attempt 10 shutdown/re-start cycles before permanently latching off. It will then be necessary to either recycle the DC input or toggle the PSON# input.	137		154				
101/00	Overvoltage	Latching	13.2		14.4	V			
12VSB	Overcurrent	Auto-recovery	2.75		3.0	Α

86mm 1U Front End DC-DC Power Supply Converter

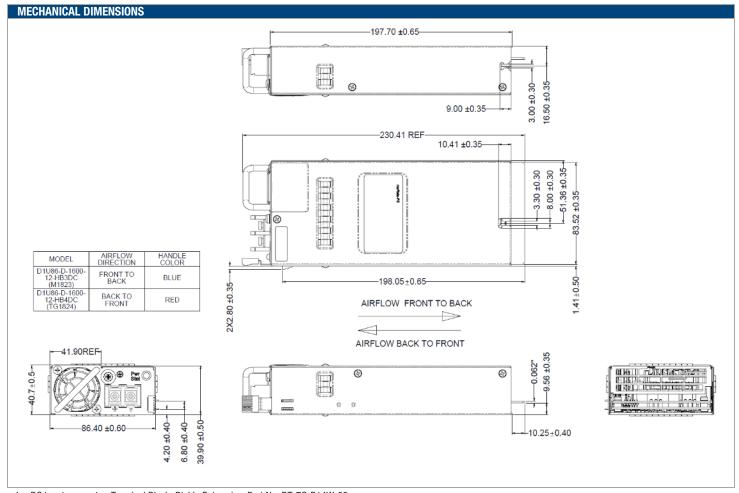

#### **CURRENT SHARING NOTES**

Main Output: Current share is achieved using the droop method. Nominal output voltage (12.20V) is achieved at 50% load and output voltage changes at a rate of 3.10mv per amp. Startup of parallel power supplies is not internally synchronized. If more than 1600W combined power is needed, start-up synchronization must be provided by using a common PS\_ON signal. To account for ±5% full load current sharing accuracy and the reduction in full load output voltage due to droop, available output power must be derated by 10% when units are operated in parallel. Internal ORing FETs are provided.

Standby output can be tied together for redundancy but total combined output power must not exceed 30W; Internal MOSFET ORing devices are used.

86mm 1U Front End DC-DC Power Supply Converter

- 1. DC input connector: Terminal Block, Dinkle Enterprise: Part No. DT-7C-B14W-02
- 2. Dimensions: 3.4" x 7.75" x 1.59" [86mm x 196.85mm x 39.9mm]
