1 Introduction

The illuminator evaluation kit EVALKIT_Illuminator intends to provide a flexible hardware interface to drive laser diodes in different application contexts using 2D based imaging systems as well as 3D time-of-flight systems.

With the kit, the user is able to drive most of **ams'** illuminator modules to allow the user to evaluate easily the performances of the product.

It is the user's responsibility to take care of the eye safety compliance at system level.

1.1 Ordering Information

Ordering Code	Description
EVALKIT_Illuminator	Illuminator evaluation kit

Figure 1:
Picture of the Evaluation Kit

2 General Description and Features

With the board, multiple driving conditions can be done to meet 2D cameras and time-of-flight systems. Its high flexibility enables the following main features:

- Possibility to define a threshold current that is typical of each laser and that can speed up the optical switch on/off of the laser
- Possibility to configure different laser voltages depending on the laser characteristics. In order to support this, the Vout of the DC/DC regulator can be configured using a trimmer
- Possibility to assemble different illuminator modules with different pad size. This is handled by defining the pad on the board as the overlapping of the pads of different illuminators' footprints. The use of socket can help to enhance the flexibility of the pad size
- Possibility to use illuminator modules' starboards or other external module PCB mounts.

Figure 2:
Added Value of Using EVALKIT_Illuminator

Benefits	Features
Enable different illuminator connections	Screw terminal block to allow external module starboard or PCB adaptor connection and suitable for long pulse width Mounting pads: solder or socket mount possibility for easy replacement and to allow high speed applications
Support High current	Up to 10A (pulsed with and without additional bias current)
Support 2D camera	Camera flash inputs supporting different electrical interfaces Different voltages allowed (1.8 V / 3.3 V / 5 V / 12 V / 24 V) On-board 100 kHz PWM oscillator with duty cycle control
Support 100 MHz ToF	High frequency driver Use of differential signals
Facilitate the automation of tests	Support external configuration systems
Enable the ease of use	Easy way to measure the current and voltage of the system No external software required for control Colored tests loops to allow an easy location of tests points

3 Revision Information

Changes from previous version to current revision v2-00	Page
Updated document format	

- Page and figure numbers for the previous version may differ from page and figure numbers in the current revision.
- Correction of typographical errors is not explicitly mentioned.

Information in this document is believed to be accurate and reliable. However, ams AG does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

Applications that are described herein are for illustrative purposes only. ams AG makes no representation or warranty that such applications will be appropriate for the specified use without further testing or modification. ams AG takes no responsibility for the design, operation and testing of the applications and end-products as well as assistance with the applications or end-product designs when using ams AG products. ams AG is not liable for the suitability and fit of ams AG products in applications and end-products planned.

ams AG shall not be liable to recipient or any third party for any damages, including but not limited to personal injury, property damage, loss of profits, loss of use, interruption of business or indirect, special, incidental or consequential damages, of any kind, in connection with or arising out of the furnishing, performance or use of the technical data or applications described herein. No obligation or liability to recipient or any third party shall arise or flow out of ams AG rendering of technical or other services.

ams AG reserves the right to change information in this document at any time and without notice.

RoHS Compliant & ams Green Statement

RoHS Compliant: The term RoHS compliant means that ams AG products fully comply with current RoHS directives. Our semiconductor products do not contain any chemicals for all 6 substance categories plus additional 4 substance categories (per amendment EU 2015/863), including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, RoHS compliant products are suitable for use in specified lead-free processes.

ams Green (RoHS compliant and no Sb/Br/Cl): ams Green defines that in addition to RoHS compliance, our products are free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material) and do not contain Chlorine (Cl) not exceed 0.1% by weight in homogeneous material).

Important Information: The information provided in this statement represents ams AG knowledge and belief as of the date that it is provided. ams AG bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. ams AG has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. ams AG and ams AG suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.
