Breakthrough Technology Combines High Performance With Low Losses

Silicon Carbide (SiC) semiconductors provide an innovative option for power electronic designers looking for improved system efficiency, smaller form factor and higher operating temperature in products covering industrial, transportation/automotive, medical, aerospace/aviation, defense and communication market segments. Our next-generation SiC MOSFETs and SiC SBDs are designed with higher repetitive Unclamped Inductive Switching (UIS) capability at rated on-resistance or current. Our SiC MOSFETs maintain high UIS capability at approximately 10–25 Joules Per Square Centimeter (J/cm²) and robust short circuit protection. Microchip’s SiC Schottky Barrier Diodes (SBDs) are designed with balanced surge current, forward voltage, thermal resistance and thermal capacitance ratings at low reverse current for lower switching loss. In addition, our SiC MOSFET and SiC SBD die can be paired together for use in modules. SiC MOSFET and SiC SBD products from Microchip will be qualified to the AEC-Q101 standard.

- Extremely-low switching losses improves system efficiency
- High-power density for smaller footprint to reduce size and weight
- 3x more thermally conductive than silicon
- Reduced sink requirements to achieve smaller size, lighter weight
- High-temperature operation improves reliability at increased power density
- Proven reliability/ruggedness, supply chain and support with Microchip quality, supply and support

- **Quality:** proven reliability and ruggedness
- **Supply:** risk averse approach throughout the supply chain
- **Support:** standard discrete, die, module, and gate drive solutions with design and application support for customers

SiC is the ideal technology for higher-switching-frequency, higher-efficiency and higher-power (>650 V) applications.

Target markets and applications include:

- Industrial—Motor drives, welding, UPS, SMPS, induction heating
- Transportation/automotive—Electric Vehicle (EV) battery chargers, on board chargers, Hybrid Electric Vehicle (HEV) powertrains, DC-DC converters, energy recovery
- Smart energy—Photovoltaic (PV) inverters, wind turbines
- Medical—MRI power supply, X-ray power supply
- Commercial aviation—Actuation, air conditioning, power distribution
- Defense—Motor drives, auxiliary power supplies, integrated vehicle systems

SiC MOSFET and SiC Schottky Barrier Diode products increase your system efficiency over silicon MOSFET and IGBT solutions while lowering your total cost of ownership by enabling downsized systems and smaller/lower-cost cooling.

Advanced R&D and Manufacturing

Design

- TCAD design and process simulators
- Mask-making and layout
- Finite Element Analysis (FEA) and Electrothermal simulation capabilities
- Design for ruggedness

Process

- Automotive quality internal fab and foundry
- Proprietary gate oxide process with exceptional reliability
- Specialized tools for SiC processes - implant, anneal, etch, furnaces, metal deposition

Analytical and Support

- Full FA capabilities in-house
- SEM/EDAX
- Thermal imaging
- Photo Emission Microscope system (Phemos 1000)

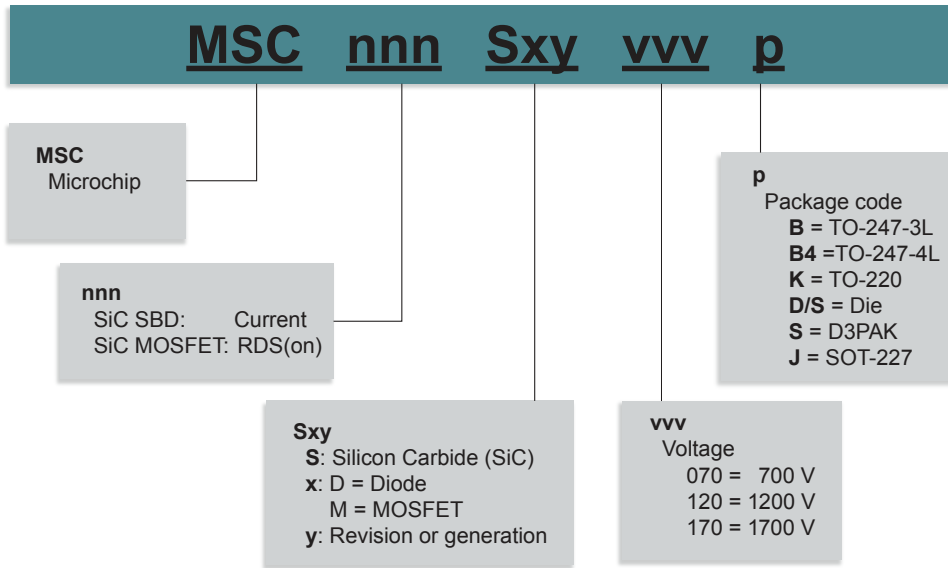

Reliability Testing and Screening

- AEC-Q101
- Full suite of tools and equipment for burn-ins and reliability screening
- Sonoscan and X-ray

SiC MOSFET Features and Benefits

Characteristics	SiC vs. Si	Results	Benefits
Breakdown field (MV/cm)	10x higher	Lower on-resistance	Higher efficiency
Electron sat. velocity (cm/s)	2x higher	Faster switching	Size reduction
Bandgap energy (ev)	3x higher	Higher junction temperature	Improved cooling
Thermal conductivity (W/m.K)	3x higher	Higher power density	Higher current capabilities
Positive temperature coefficient		Self regulation	Easy paralleling

Power Module Advantages

- High-speed switching
- Low switching losses
- Low-input capacitance
- High-power density
- Low-profile packages
- Minimum parasitic inductance
- Lower system cost
- Standard and custom modules
- 30+ years design experience

AgileSwitch Gate Driver Solutions

Gate Driver Reference*	Gate Driver Type	Gate Driver Part Number	Adapter Board Part Number
1	Core	2ASC-12A1HP	SP6CA1
2	Core	2ASC-12A1HP	62CA1
3	Plug & Play	62EM1-00001	Not Applicable

*Refer to footnotes in SiC product tables

2ASC-12A1HP

Improve switching efficiency and EMI performance, all while protecting your valuable SiC devices. The AgileSwitch 2ASC dual-channel high performance gate driver cores are designed to take on your SiC implementation challenges.

62CA1 and SP6CA1 (Shown with 2ASC-12A1HP connected)

Compatible with the AgileSwitch 2ASC Gate Driver Cores, the family of Module Adapter Boards provides a platform to rapidly evaluate and optimize new SiC power devices. Standard offerings include a reference design for the 1200V SP6LI (SP6CA1) and 1200V D3 (62CA1).

62EM1

Control, monitor, and protect the latest 62 mm SiC devices using the Plug-and-Play 62EM Gate Driver Boards. Designed for traction applications, the 62EM can drive up to 1.7 kV devices at 100 kHz with configurable fault settings and patented Augmented Switching technology.

User-Friendly Reference Designs

Microchip and our partner ecosystem provide open-source, user friendly SiC MOSFET reference design solutions that enable faster time to market for customers using our SiC MOSFETs and power modules. You can use isolated dual-gate driver reference designs with our SiC MOSFETs in a number of SiC topologies.

SiC Reference Designs

Part Number	Gate Drive or Line Voltage	KHz, max	Per Side Drive Power (W)	Description
MSCSICMDD/REF	-5 to +20 V	400	8 W	SiC discrete gate driver board
MSCSICSP3/REF2	-5 to +20 V	400	16 W	SiC SP3 module driver board
MSCSICSP6L/REF3	-5 to +20 V	400	16 W	SiC SP6LI module driver board
MSCSICPFC/REF5	In: 400 Vrms, Out: 700 Vdc	140	30 kW	30 kW 3-phase Vienna PFC (design files only)

The MSCSICMDD/REF1 is a switch-configurable high/low-side driver with half bridges or independent drive.

- 400 kHz maximum switching frequency
- 8W of gate drive power per side
- 30A peak output current
- -5V/+20 V gate drive voltage
- ±100 kV/uS capability
- Galvanic isolation of more than 2000V on both gate drivers

The MSCSICPFC/REF5 is a Vienna 3-Phase PFC reference design for Hybrid Electric Vehicle/Electric Vehicle (HEV/ EV) charger and high-power switch mode power supply applications.

- 30 kW Vienna rectifier topology at 98.6 % peak efficiency
- 380/400 VAC, 50 Hz/60 Hz input voltage with 700V DC output voltage
- 140 kHz pulse-width modulation switching frequency
- < 5% current THD at half and full loads
- 700 V SiC MOSFETs and 1200 V SiC diodes
- dsPIC33CH using 3-level modulation for digital control

SP3F standard package compatible

The MSCSICSP3/REF2 is a half bridge driver compatible with SP3F standard package modules.

- 400 kHz maximum switching frequency
- 16W of gate drive power per side
- 30A peak output current
- -5 V/+20 V gate drive voltage
- ±100 kV/uS capability
- Galvanic isolation of more than 2000 V on both gate drivers

The MSCSICSP6/REF3 is a half bridge driver for the low inductance SP6LI power modules.

- Stray inductance < 3 nH to fully benefit from SiC
- Designed to be easy to parallel
- Up to 1200 V and 586 A
- Half Bridge Driver
- Up to 400 kHz switching frequency
- 12 V VIN supply
- Capable of 16 W of gate drive power/side
- 30 A Peak Source output current
- Min.100 KV/μS CMTI

Support

Microchip is committed to supporting its customers in developing products faster and more efficiently. We maintain a worldwide network of field applications engineers and technical support ready to provide product and system assistance. For more information, please visit www.microchip.com:

- Technical Support: www.microchip.com/support
- Evaluation samples of any Microchip device: www.microchip.com/sample
- Knowledge base and peer help: www.microchip.com/forums
- Sales and Global Distribution: www.microchip.com/sales

Training

If additional training interests you, Microchip offers several resources including in-depth technical training and reference material, self-paced tutorials and significant online resources.
