Datasheet

ISL98603

5 Channel DC/DC Converter + V_{ON} Slice + Power-Good

Input Voltage (V)	9.5 to 15
V _{BOOST} (V)	10.83 to 19
Boost Current Limit (A)	5
V _{ON} (V)	up to 36
V _{OFF} (V)	down to -10
V _{LOGIC} (V)	(V _{logic1}) 2.5 to 3.3 (V _{logic2}) 0.9 to 2.0
# of V _{COM}	N/A
# of Gamma	N/A
Features	Automatic Start-Up Sequencing, fault protection
Input Voltage (min) (V)	9.5
Input Voltage (max) (V)	15
V _{BOOST} (min) (V)	10.83
V _{BOOST} (max) (V)	19
V _{ON} (max) (V)	36
V _{OFF} (min) (V)	-10
V _{LOGIC} (min) (V)	2.5, 0.9
V _{LOGIC} (max) (V)	3.3, 2

Product Information

Key Features

- 9.5V to 15.0V Input Supply
- 1.3MHz Switching Frequency
- 5.0A Integrated Boost for Up to 19V A_{VDD}
- V_{ON} Charge Pump, Up to 36V and 120mA
- V_{OFF} Charge Pump, Down to -10V and 120mA
- Synchronous Buck1 for 3.3V/2.5V with 2.0A Peak FET
- Synchronous Buck2 Controller Output from 0.9V to 2.0V
- AVDD Delay Switch Capable of Soft-starting into a Highly Capacitive, Heavy Load
- V_{ON} Slice Function Integrated
- Power-Good Function for TCON Enable
- Automatic Start-Up Sequencing
- UVLO, UVP, OVP, OCP, and OTP Protection
- 40 Ld 6x6 QFN
- Specified for Ambient Operation Over the -40°C to +85°C Temperature Range
- Pb- Free (RoHS Compliant)

Description

The ISL98603 represents a high power, integrated LCD supply IC targeted at large panel LCD displays. The ISL98603 integrates a high power boost converter for AVDD generation, V_{ON} and V_{OFF} charge pump drivers, one synchronous buck regulator, and one synchronous buck controller for 2 logic voltages. The V_{ON} slicing circuitry and power-good function are also included.

Operating at 1.3MHz, the AVDD boost converter features a 5.0A boost FET. Feedback is taken from the far side of the delay FET for improving regulation. The OVP circuit protects output side components.

The logic synchronous buck converter features two 2.3A FETs operating at 1.3MHz internal clock. The output voltage is set by the IC internally or feedback resistor. The soft-start circuitry are also integrated with the buck.

The second logic voltage is generated from synchronous buck converter with MOSFET controllers. The overcurrent protection is also integrated with the buck.

The charge pump of V_{ON} and V_{OFF} use the full switching frequency and integrates the driver for high current capability. V_{ON} is further processed through an integrated V_{ON} Slice circuit in order to reduce flicker.

Alternative fixed voltages at the boost, Buck1, Buck2, V_{ON} charge pump, and V_{OFF} charge pump are available in ISL98603, please contact Intersil Marketing via email at rmonteir@intersil.com.
