UP/DOWN BINARY COUNTER
 (With Separate Up/down Clocks)

DESCRIPTION — The '193 is an up/down modulo-16 binary counter. Separate Count Up and Count Down Clocks are used and in either counting mode the circuits operate synchronously. The outputs change state synchronous with the LOW-to-HIGH transitions on the clock inputs. Separate Terminal Count Up and Terminal Count Down outputs are provided which are used as the clocks for subsequent stages without extra logic, thus simplifying multistage counter designs. Individual preset inputs allow the circuits to be used as programmable counters. Both the Parallel Load (\overline{PL}) and the Master Reset (\overline{MR}) inputs asynchronously override the clocks. For functional description and detail specifications please refer to the '192 data sheet.
